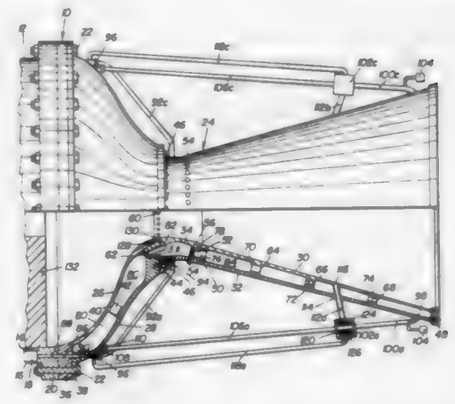
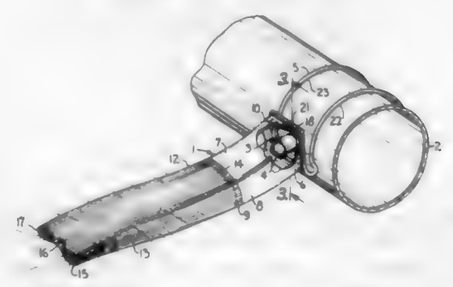
fluid reservoir and first conduit means carried by said rocket motor, said means being connected to said supply port and adapted to supply fluid to said aft chamber under pressure;
a plurality of second conduit means each communicatively connected to a respective one of said pressurized-fluid outlet ports;



a plurality of third conduit means each communicatively connected to a respective one of said coolant supply ports;
a plurality of fourth conduit means each extending through said outer wall and communicatively connected to a respective one of said injection ports;
a plurality of fifth conduit means each communicatively connected to said first conduit means; and
a plurality of valves each connected to a respective one of said second, third, fourth and fifth conduit means and operable between a first configuration thereof wherein said second and third conduit means connected thereto are in communication and a second configuration thereof wherein said second and fourth conduit means, and said third and fifth conduit means, connected thereto are respectively in communication.

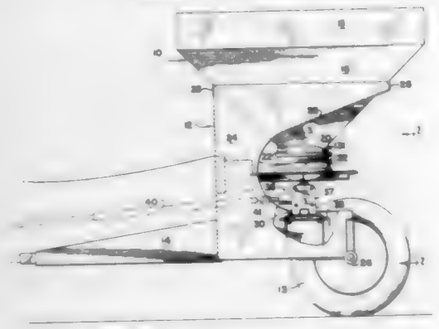
3,374,955
FLOW DISTRIBUTOR ATTACHMENT FOR IRRIGATION FLOW WAYS
Lewis Wayne Hester, Sublette, Kans., assignor to Anadarko Production Company, Liberal, Kans., a corporation of Delaware
Filed Jan. 10, 1966, Ser. No. 519,670
2 Claims. (Cl. 239—145)



A flow distributor for use in an irrigation system having a flow way connected to a source of water and discharge openings directed laterally therefrom, said dis-

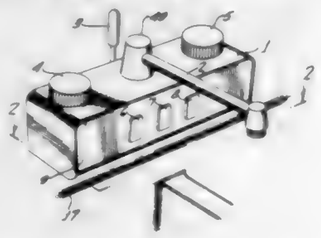
tributor including an elongate flexible collapsible tube with an impervious portion extending from the inlet end with the major portion an elongate foraminous tube that extends from the impervious portion to the outlet end. The distributor being supported with its inlet end surrounding the discharge opening of the flow way by a wire loop threaded into a hem of the tube at the inlet end for maintaining same in distended position with extensions on the loop forming resilient clamp means engaged with the flow way, said tube having the central portion at the outlet end connected to provide laterally spaced restricted discharge openings whereby water passes laterally through the foraminous portion at low velocity.

3,374,956
FERTILIZER SPREADER
Michael V. Bazilli, Oakville, and Stanley G. Siddall, Orangeville, Ontario, Canada, and William G. Moore and Jack C. Whitesides, Albany, Ga., assignors to Lilliston Implement Company, Albany, Ga., a corporation of Georgia
Filed July 19, 1965, Ser. No. 472,819
7 Claims. (Cl. 239—683)



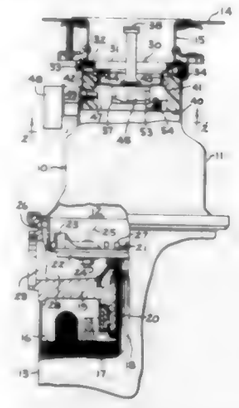
A fertilizer spreader for transporting and spreading fertilizer over a selected area of the ground with accurate control over the volume of the material spread and the area on which it is spread, while the speed of the device over the ground can be varied from extremely low speeds to extremely high speeds. The spreader includes a wheel supported frame, a spinner rotatable about a vertical axis, apertured valve plates positioned above the spinner for admitting fertilizer to the spinner, a circular baffle rotatable with the spinner above the valve plates, and an impeller positioned between the baffle and valve plates and rotatable with the spinner.

3,374,957
FLUID FLOW CONTROL DEVICE
Truman V. Tyler, Palos Verdes Estates, Calif., assignor to Sierra Financial Corporation
Filed June 3, 1965, Ser. No. 460,977
5 Claims. (Cl. 241—33)



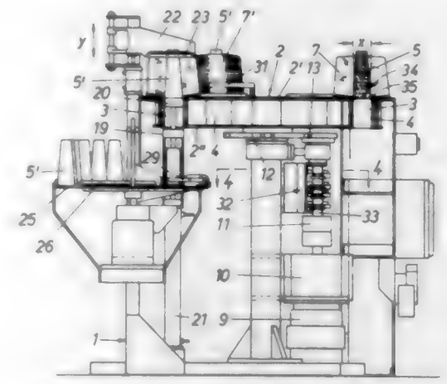
Electrical solenoids are placed in hot and cold water lines and such solenoids are actuated by push button controls to control the hot and cold water flow to a water faucet. The cold water control is interconnected with the control for a garbage disposal unit so as to provide simultaneous operation of the cold water with the disposal unit upon the actuation of a single control.

3,374,958
FOOD WASTE DISPOSER
William M. Shive, Louisville, Ky., assignor to General Electric Company, a corporation of New York
Filed June 11, 1965, Ser. No. 463,153
6 Claims. (Cl. 241—46)



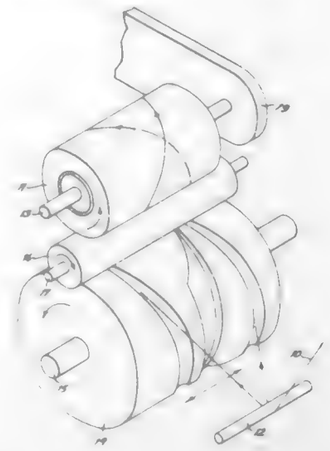
A stopper having passageways therethrough to allow water to drain from a sink or enter disposer for comminuting operation. A member is provided to selectively open and close the passageways. Means are also provided to separate at least a portion of the stopper periphery from its sealing surface to vent the comminuting chamber of the disposer as the passageways are opened.

3,374,959
APPARATUS FOR THE INSERTION OF A CORE INTO THE AXIAL OPENING OF YARN SPOOLS
Gerhard Tigges, Wuppertal-Cronenberg, Germany, assignor to Lebrecht Tigges, Wuppertal-Barmen, Germany, a corporation of Germany
Filed Dec. 17, 1965, Ser. No. 514,504
Claims priority, application Germany, Dec. 19, 1964, T 27,672
6 Claims. (Cl. 242—1)



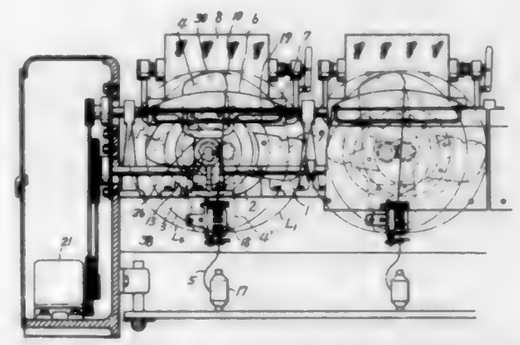
An apparatus for the ejection and insertion of a core into the axial opening of yarn spools or the like, which comprises a frame and a table movably mounted on the frame. A yarn wind is supported on the table and moves with the table past a plurality of working positions. First means for ejecting in one of said working positions of one core are disposed in an axial recess of the yarn spool from the upper side of the table, and second means for injecting in another of the working positions of another core from the lower side of said table are arranged. The table has passage openings having a diameter substantially equal with the largest diameter of the cores, and the first means for ejecting and the second means for injecting operate through the passage openings of the table.

3,374,960
STRAND WINDING
Robert K. Stanley, Media, Pa., assignor to Techniservice Corporation, Lester, Pa., a corporation of Pennsylvania
Filed Oct. 23, 1965, Ser. No. 502,850
18 Claims. (Cl. 242—18.1)



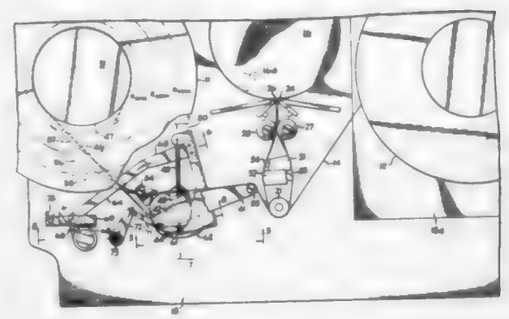
This invention relates to winding of textile strands into package form, concerning especially traverse winding thereof. Formation of a ribbon wind is precluded by means of a roll intermediate the package and strand-traversing means. The intermediate roll receives the strand and deposits it onto the package while also normally rotating the package. The intermediate roll also introduces variation into the traverse, both by simply being there and more especially by being moved bodily on its axis with respect to the traversing means, which in preferred form is a grooved traversing drive roll.

3,374,961
TRAVERSE MECHANISM
Naotoshi Otsuka, Mishima-shi, and Masayuki Norawa, Numazu-shi, Japan, assignors to Toshiba Machine Co., Ltd., Tokyo, Japan, a corporation of Japan
Filed Jan. 26, 1965, Ser. No. 428,036
Claims priority, application Japan, Jan. 27, 1964, 39/3,710
5 Claims. (Cl. 242—43)



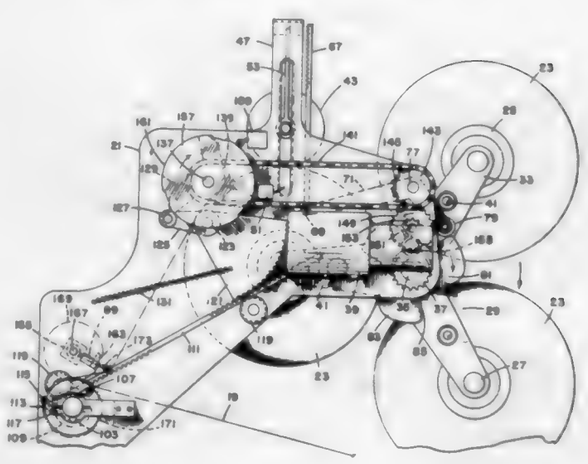
An improved rotary mechanism for traversing yarn is provided by traversing the yarn over oppositely rotating rotary wings rather than the grooved cam mechanism in conventional yarn traverse mechanisms presently employed. Rotary wings are fixed to the ends of rotary shafts at an appropriate distance from the center axis at opposite ends thereof. A rotary wing is rotated in the clockwise direction to move the supply yarn close to the forward end of the rotary wing from the left side of the bobbin along the convex end of a guide-part toward the right direction. As soon as the yarn is off the forward end of the rotary wing, the end of the other rotary wing is rotated in the opposite direction to catch the yarn and to move it along the aforementioned guide-part toward the left direction, to thereby wind the supply yarn onto the bobbin.

3,374,962
TAPE TENSION CONTROL FOR A TAPE RECORDER
Thomas Judson Dunsheath, Glenview, Ill., assignor to Ampex Corporation, Redwood City, Calif., a corporation of California
Filed June 23, 1965, Ser. No. 466,289
12 Claims. (Cl. 242—55.12)



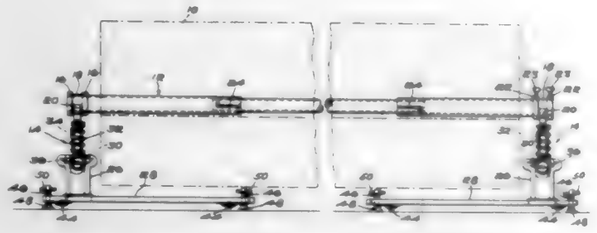
A tape tension control maintains a relatively constant tension in the magnetic tape. Tape tension is sensed by a lever having two sensing guide members displaced from the fulcrum. The torque at one guide is a measure of tape tension whereas the torque at the other guide is related to tape wrap radius. A spring applies reference bias to the tension sensing lever. The spring is fastened to a spring support which is pivoted about a point aligned with the spring when the apparatus is in the record mode position. The support may be pivoted to change the reference bias. Upon release of a brake holding the support in the new position, the action of the spring returns the support to the record mode position.

3,374,963
APPARATUS FOR SPLICING TRAVELING WEB MATERIAL
John D. Conti, Elkins Park, Pa., assignor to FMC Corporation, Philadelphia, Pa., a corporation of Delaware
Filed Mar. 11, 1966, Ser. No. 533,645
9 Claims. (Cl. 242—58.4)



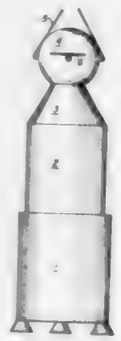
Apparatus for splicing the leading end portion of a web to the trailing end portion of a continuously advancing web without interrupting web travel and with the splicing apparatus being set in operation by means sensing the supply and/or tension of the traveling web.

3,374,964
CARPET ROLL HANDLING DEVICE
Pascal F. Corvotta, 9 Glendale Drive, Danvers, Mass. 01923
Filed July 11, 1966, Ser. No. 564,389
1 Claim. (Cl. 242—86.52)



A rod extended through the center of a rolled carpet is supported at each end in bearings carried by jacks. Each jack is supported on a base having rollers and may be rolled into position to engage the extended ends of the rod with the rug resting on the floor. The jacks are then operated to lift the carpet roll off floor to permit unwinding of the carpeting. Provision is made for elevating the bases to lift the rollers off the floor so that the jacks will remain stationary while the carpeting is being withdrawn.

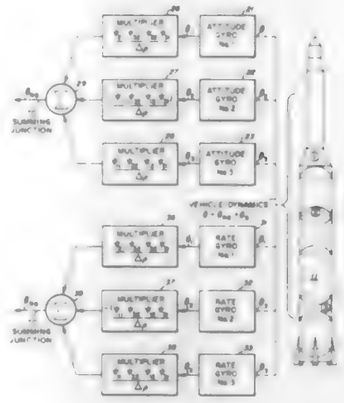
3,374,965
ESCAPE CAPSULE
Alexander T. Deutsch, 1735 Riggs Place NW., Washington, D.C. 20009
Filed Jan. 31, 1967, Ser. No. 612,883
9 Claims. (Cl. 244—1)



A sealed compartment secured to the upper top of a spacecraft and having a sealable door providing communication with the body of the spacecraft, into which astronauts may seal themselves and be safely sustained for a short time period as a safety compartment separable from the spacecraft and having means for safe transportation thereof back to earth.

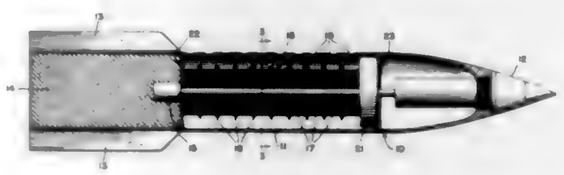
3,374,966
CONTROL SYSTEM
James C. Howard, Sunnyvale, Calif., assignor to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration
Filed July 19, 1966, Ser. No. 566,396
5 Claims. (Cl. 244—3.2)

In a large flexible space vehicle, signals from sensors detecting the motion of the vehicle are processed to reduce or eliminate the effects on the signals of bending motion of the vehicle. The processing is performed in accordance with functions determined by the elastic properties of the vehicle. This processing reduces or elimi-



nates the effects of bending motion on the signals, leaving the desired rigid-body motion portion of the signals for use in their manual or automatic control of the vehicle.

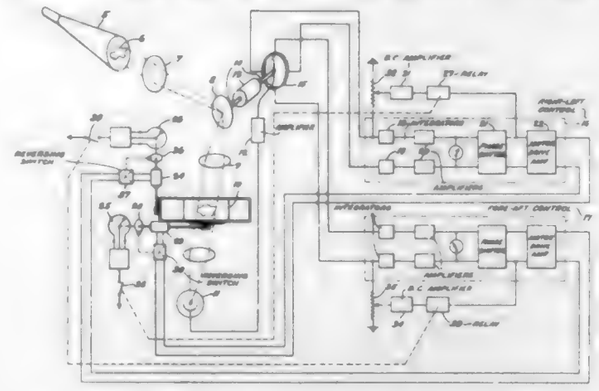
3,374,967
COURSE-CHANGING GUN-LAUNCHED MISSILE
Harold J. Plumley, Washington, D.C., assignor to the United States of America as represented by the Secretary of the Navy
Filed Dec. 6, 1949, Ser. No. 131,441
5 Claims. (Cl. 244—3.14)



1. Apparatus for changing the course of a missile in flight comprising, a casing for said missile, a reaction charge disposed within said casing and arranged to direct an impulse through one side of said casing and through the center of gravity of the missile as the charge is fired whereby the missile is given a lateral thrust and is directed along a new trajectory with the longitudinal axis of the missile initially at an angle with respect thereto, means on the missile for bringing said axis thereof into alignment with the new trajectory, and means carried by the missile and responsive to a transmitted signal from the launching point for firing said charge.

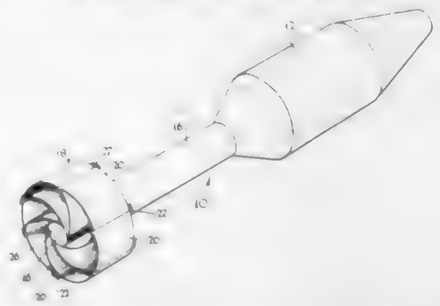
3,374,968
AUTOMATIC SCANNING AND LOCK-IN APPARATUS FOR A MECHANICAL OPTICAL SYSTEM USED IN NAVIGATIONAL CONTROL
William J. V. Toman, Cuyahoga Falls, Ohio, assignor to Goodyear Aerospace Corporation, a corporation of Delaware
Filed July 21, 1951, Ser. No. 237,985
13 Claims. (Cl. 244—3.17)

13. In combination, means for producing an actual image of a relatively large area of terrain, a map of the terrain to substantially the same scale and orientation, means for effecting a wide range of relative scanning movement between the map and image for seeking a substantial match therebetween, separate means for effecting a narrow range of relative scanning movement between the map and image for maintaining a continuous



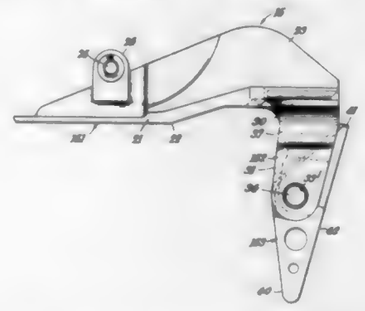
match therebetween, and means responsive to a substantial match between the map and image.

3,374,969
STABILIZED PROJECTILE
Richard R. Rhodes, Cheltenham, Pa., assignor to the United States of America as represented by the Secretary of the Army
Filed July 28, 1966, Ser. No. 568,681
3 Claims. (Cl. 244—3.27)



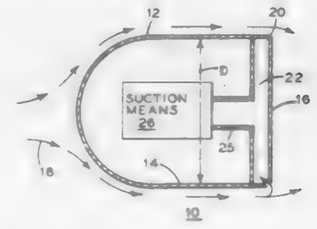
A fin stabilized projectile including a head portion of larger diameter than the bore of the weapon from which it is fired. A boom portion integral with the head portion and capable of passage through the weapon bore, and having a reduced diameter portion at its rear end. Resilient stabilizing means secured to the reduced portion of the boom and capable of passage through the bore.

3,374,970
ARRESTER HOOKS FOR AIRCRAFT
Arthur N. Rhodes, Fulwood, Preston, and Alfred E. Ellison, Lytham St. Anne's, England, assignors to British Aircraft Corporation (Operating) Limited, London, England, a British company
Filed Sept. 6, 1966, Ser. No. 577,230
8 Claims. (Cl. 244—110)



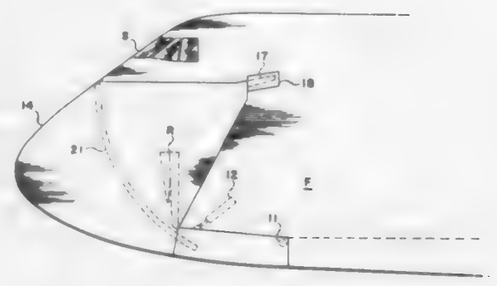
1. An arrester hook for an aircraft, comprising a leg portion adapted to be connected through suspension means to the aircraft, a foot portion extending at an angle to the leg portion and providing a notch for receiving an arrester wire in the instep or angle between the leg portion and the foot portion, and an elongated toe portion having a substantially flat under-surface for riding over the landing surface, said toe portion being pivotally mounted on a transverse axis in the foot portion so as to be capable of adapting itself to variations in the relative angle between the hook and the landing surface.

3,374,971
FLUID DYNAMIC DRAG REDUCTION
Gunnar Heskestad, East Brunswick, N.J., assignor to American Standard Inc., New York, N.Y., a corporation of Delaware
Filed Aug. 2, 1965, Ser. No. 476,447
10 Claims. (Cl. 244—130)



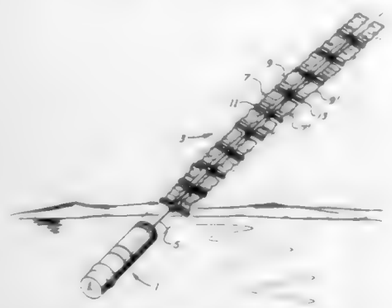
1. The method of minimizing the aerodynamic form drag on an aircraft wing which has top and bottom surfaces and a flat bluff trailing surface and which is moving through air at subsonic velocities, which consists in applying suction through a substantially uniform and continuous slot positioned along the peripheral edge between at least one of said top and bottom surfaces and said bluff trailing surface, said slot having at least one rounded edge and being connected through a conduit of uniformly varying cross-section to a source of suction, and maintaining said suction so as to draw air over said rounded edge through said slot and said conduit to said source of suction.

3,374,972
HINGED END SECTION FOR CARGO AIRCRAFT
James A. Webb, Sr., Smyrna, Ga., assignor to Lockheed Aircraft Corporation, Burbank, Calif.
Filed Sept. 27, 1965, Ser. No. 490,358
14 Claims. (Cl. 244—137)



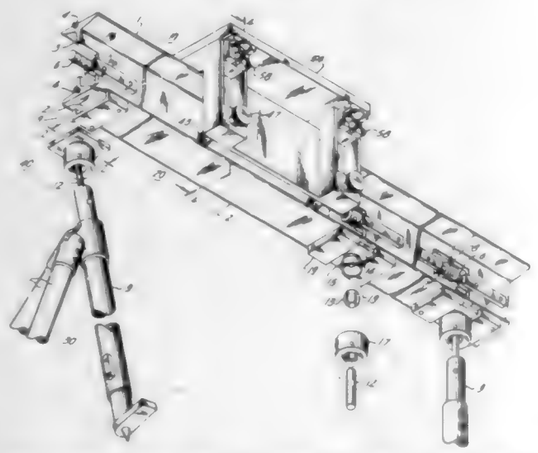
A door for the cargo compartment of an aircraft is provided which forms an aerodynamic clean end of the fuselage and swings vertically in visor fashion from the fuselage to an overhead, open position. Side pivots mount the visor door to the fuselage and a slidable center connection with drive gives the visor door three-point support to assure operating ease and stability. When opened, the door is located above the fuselage and its lower edge is configured to permit a field of vision under it from the cabin for taxiing and observing on and off cargo loading and to reduce the weight of the door.

3,374,973
DRAG DEVICE
David T. Lokerson, Silver Spring, Md., assignor to the United States of America as represented by the Secretary of the Army
Filed Apr. 6, 1966, Ser. No. 540,774
9 Claims. (Cl. 244—138)



1. A banner drag device comprising
a rope like elongated flexible tow member, a plurality of longitudinally spaced banner support members mounted on said tow member, and
a plurality of banner members mounted on said support members, each banner supported by a single support member to form an array of banners.

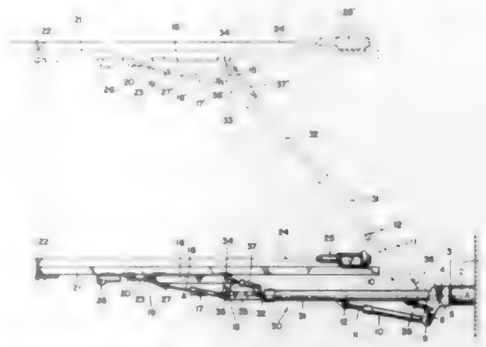
3,374,974
CAMERA-SUPPORTING MEANS
Urs Beat Furrer, Tarrytown, N.Y. (Carleton Ave., Briarcliff Manor, N.Y. 10510), and Ronald Martin Lautore, New York, N.Y. (2500 Johnson Ave., Riverdale, N.Y. 10471)
Filed May 16, 1966, Ser. No. 550,426
6 Claims. (Cl. 248—13)



A camera-supporting dolly for riding on an extended track. Several mutually perpendicular and adjustable guide wheels are provided in the dolly to prevent the dolly from lifting off the track or tilting with respect to the track, thereby minimizing unwanted shaking and vibration of the dolly.

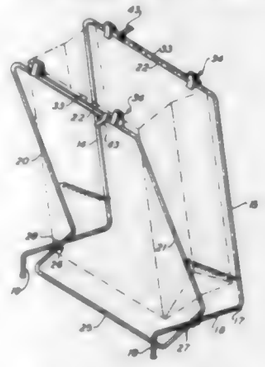
3,374,975
BOOM FOR DRILLING MACHINES
Herbert Bronder, Sandvika, Norway, assignor to Ingersoll-Rand World Trade, Hamilton, Bermuda
Continuation-in-part of application Ser. No. 469,783, July 6, 1965. This application Nov. 23, 1965, Ser. No. 509,319
Claims priority, application Norway, July 9, 1964, 153,970; Jan. 15, 1965, 156,388
10 Claims. (Cl. 248—16)

Boom apparatus for supporting a rock drill which permits parallel holes to be drilled. There is a motor for rotating the boom 360° about the longitudinal axis of the boom. The apparatus for maintaining the drill parallel may be of the parallelogram type or it may be control apparatus responsive to the pivotal movement of the main boom. Such control apparatus may be series con-



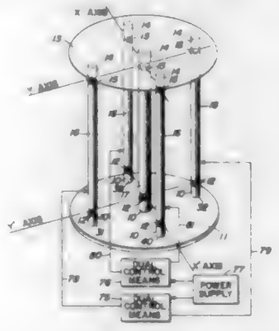
nected motors for pivoting the drilling apparatus in an amount equal to and in a direction opposite from the pivoting of the main boom.

3,374,976
REFUSE BAG HOLDER
Robert A. Kurlander, 277 Hillside Ave., Nutley, N.J. 07110, and George M. Nutting, 202 Beverly Hills Road, Clifton, N.J. 07012
Filed Jan. 6, 1966, Ser. No. 519,100
3 Claims. (Cl. 248—97)



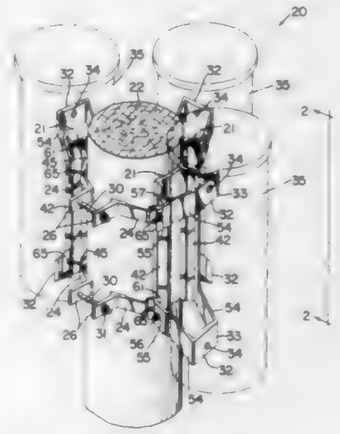
A refuse bag holder defined by a pair of opposed, self-standing frames each frame having cam operated clamping means on the top thereof for detachably securing a refuse bag thereto.

3,374,977
ANTENNA POSITIONER
George Moy, Jr., Dallas, Tex., assignor to Collins Radio Company, Cedar Rapids, Iowa, a corporation of Iowa
Filed June 9, 1966, Ser. No. 556,494
11 Claims. (Cl. 248—163)



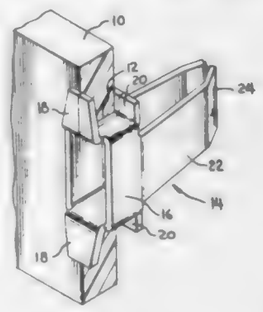
A concept and embodiments of positioning one plane with respect to another (as in antenna positioning) employing linkages and linear drives rather than conventional gear and bearings. Suspension arms are employed between a mounting and a base plane with each arm comprising a single linear drive unit each end of which is pivotably connected to one of the planes. A further fixed length suspension means is incorporated between planes to effect geometric stability. The mounting plane may be positioned by driving diagonally opposite ones of the linear drive units to effect mounting plane rotation about two mutually perpendicular axes with respect to the base plane.

3,374,978
TRANSFORMER MOUNTING DEVICE AND METHOD
John L. Salmon, Memphis, Tenn., and John E. Lile, St. Louis County, Mo., assignors, by direct and mesne assignments, to Utility Products Manufacturing Company, Memphis, Tenn., a corporation of Tennessee
Filed Feb. 25, 1966, Ser. No. 530,059
12 Claims. (Cl. 248—221)



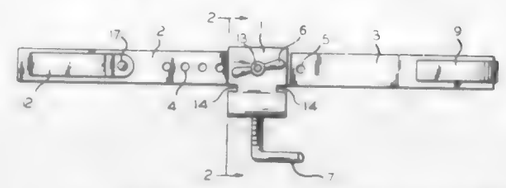
This invention pertains to an improved method and device for supporting apparatus, such as electrical transformers, on poles. Elongated bearing plates are employed which may be fastened about poles using link means having hooks in their outer end portions designed to permit selective compensation for variations in pole circumferences. Brackets upon which said apparatus will be mounted may be attached to said plates at a plurality of positions and may be rotated with respect to said plates to compensate for different sizes of apparatus to be supported.

3,374,979
FASTENER
Daniel Russell Coldren and Ralph Rupp Lau, Harrisburg, Pa., assignors to AMP Incorporated, Harrisburg, Pa.
Filed Dec. 10, 1965, Ser. No. 513,012
3 Claims. (Cl. 248—223)



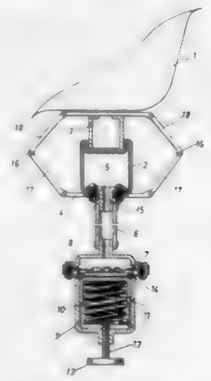
A fastener is disclosed for electrically grounding and mechanically fastening a period circuit board to a chassis or the like. Various types of inserts are provided for mating with a spring-arm receptacle. The receptacle is secured to a board member by flanges or lances. Ears are provided for preventing overstressing of the arms of the receptacle.

3,374,980
PAINT PAN SAFETY CLAMP
Joseph Chovan, 3712 Sheridan Road, Kenosha, Wis. 53140
Filed Aug. 22, 1966, Ser. No. 574,116
9 Claims. (Cl. 248—229)



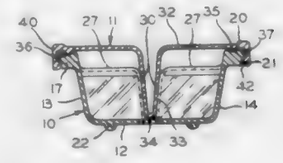
1. In a paint tray safety clamp, a frame, arms projecting from at least two sides of said frame, restraining means to restrict movement longitudinally and laterally of said arms located at a fixed position on each such arm, one said restraining means having one side open and a second said restraining means having a corresponding side which can be selectively opened and closed, means for adjusting the distance of at least one said restraining means from said frame, and compression means for attaching and detaching said frame to an object having a pair of spaced surfaces.

3,374,981
SPRING SUSPENSION FOR A SEAT
Anton Stuckenberger, Vagen, and Arnold Tschursch, Hinrichssegen, Post Henfeld, Germany, assignors to Georg Fritzmeier, Kommanditgesellschaft, Grosshelfendorf, Germany, a firm of Germany
Filed July 7, 1965, Ser. No. 470,100
Claims priority, application Germany, Aug. 28, 1964, F 43,848
7 Claims. (Cl. 248—400)



Spring suspension for a vehicle seat in which a rolling-type bellows device is positioned under the seat. A diaphragm is connected to a pneumatic transmission line to enclose an air column, which can be moved against an adjustably spring-loaded piston by displacing the diaphragm.

3,374,982
ICE CUBE TRAY
George Joseph Sallade, R.R. 2, Box 202, Loogootee, Ind. 47553
Filed Nov. 24, 1965, Ser. No. 509,507
10 Claims. (Cl. 249—121)



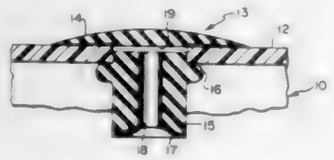
1. In an ice cube tray:
(a) a tray including a plurality of spaced partitions arranged in adjacent side by side rows,

(b) the partitions of one row being spaced laterally from the partitions of the adjacent row to provide an intervening recess, and

(c) a lid attached to and disposed over the tray,

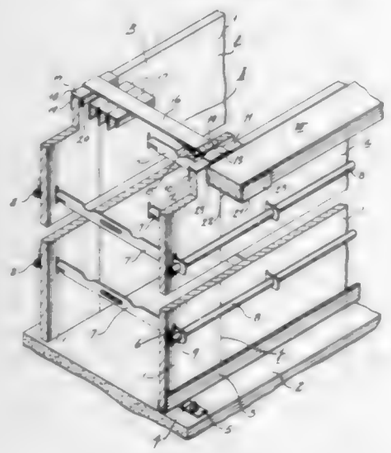
(d) the lid including a depending rib interfitting the recess and co-operating with the partitions to form freezing compartments.

3,374,983
CONCRETE FORM STRIPPING VALVE
Eldridge R. Garretson, North Kingsville, William S. Spurr, Geneva, and Chester L. Ward, Ashtabula, Ohio, assignors to The Molded Glass Company, Ashtabula, Ohio, a corporation of Ohio
Filed Aug. 9, 1965, Ser. No. 478,149
8 Claims. (Cl. 249—205)



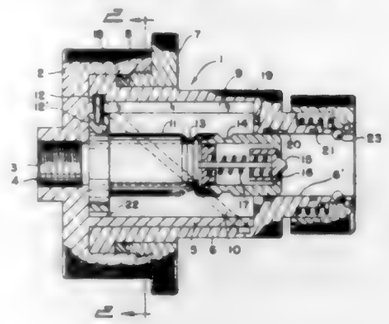
A valve for concrete molding form having a stripping aperture, such valve having a domed head and cylindrical stem, with the stem having an internal air passage from the free end to a point just beneath the head. The valve is inserted in the mold aperture and the stem has an external rib which will pass through the aperture by resilient deformation but engage with the underside for permanent assembly to the form in the normal use of the same.

3,374,984
WALL FORM BRACKET
Walter E. Mueller, 1347 Cobury Lands Drive, St. Louis, Mo. 63137
Filed Sept. 16, 1965, Ser. No. 487,694
1 Claim. (Cl. 249—216)



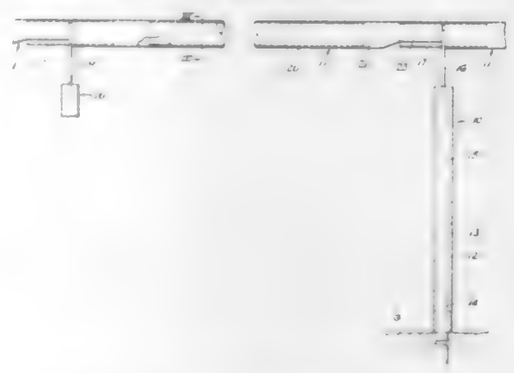
A wall form bracket for use with a pair of spaced-apart wall form panels having a cross bar for spanning the distance between the panels, a first panel engaging member being integrally formed in one end portion of said cross arm and opening downwardly, a waler receiving portion provided adjacent said panel engaging member and opening upwardly for maintaining a waler proximate the outer surface of one of said panels, and a plurality of second panel engaging members engages to the other end portion of said cross arm for selected engagement with said other panel for accommodating the predetermined distance between the panels, and hinge means incorporated in said cross arm to render same swingable within a vertical plane.

3,374,985
COUPLING DEVICE FOR PIPES, CONDUITS AND THE LIKE
John D. Gessic, Chardon, Ohio, assignor of one-half to Cullen B. Crawford, Cleveland, Ohio
Filed Oct. 22, 1965, Ser. No. 500,859
11 Claims. (Cl. 251—252)



1. A coupling device for pipes, conduits and the like comprising an end cap having a substantially central opening extending therethrough, a valve body positioned adjacent said end cap and having a substantially central opening extending therethrough in substantial alignment with said opening in said end cap, a sealing ring surrounding said valve body and securing said body to said end cap, a longitudinally extending slot in said end cap, a spiral groove in said valve body, a valve positioned in said valve body adapted to be moved longitudinally therein, and means on said valve in engagement with said slot and said spiral groove, said means being retained in engagement with said slot and groove as said valve is moved longitudinally in said valve body.

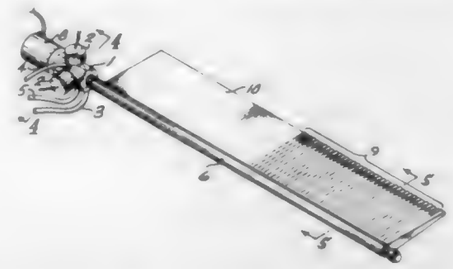
3,374,986
DEMOUNTABLE RAIL FENCE
Charles R. McElroy, Clarence, and Vincent J. Rossitto and Edward H. Robb, Buffalo, N.Y., assignors to Metal Cladding, Inc., North Tonawanda, N.Y.
Filed Feb. 2, 1967, Ser. No. 613,627
4 Claims. (Cl. 256—59)



A demountable rail fence wherein a series of upright posts having T-shaped upper ends and tubular horizontal rails are each notched at one end so that the other end may be slipped over a T projection of one upright post and the notched end may be snapped laterally over the opposed T projection of the next adjacent upright post.

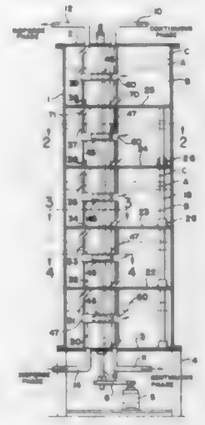
3,374,987
ADHESIVE MIXER-APPLICATOR FOR USE WITH FAST CURING ADHESIVES
Rudy E. Joyce, Earl D. Hasenwinkle, and Frank Wislocker, Longview, Wash., assignors to Weyerhaeuser Company, Tacoma, Wash., a corporation of Washington
Filed Apr. 17, 1967, Ser. No. 631,397
8 Claims. (Cl. 259—7)

An adhesive mixer-applicator adapted to operate in a highly restricted space for substantially simultaneously mixing the components of fast curing adhesives and applying them to a moving surface. The apparatus is composed of a manifold having a series of distribution tubes connected at right angles to the manifold for delivery of adhesive to the moving surface to be bonded, means connected to the manifold for separately admitting adhesive



components to the manifold, and a rotatable shaft mounted within the manifold. The shaft is sized such that the adhesive passing between the clearance of the shaft and the inner wall of the manifold is subjected to high shear sufficient to cause turbulent mixing of the adhesive.

3,374,988
LIQUID-LIQUID CONTACTOR
John S. Eckert, Silver Lake, Ohio, assignor, by mesne assignments, to U.S. Stoneware Inc., a corporation of Massachusetts
Filed May 7, 1965, Ser. No. 454,075
8 Claims. (Cl. 259—8)



1. A liquid-liquid contactor which comprises (1) an outer shell and (2) an inner shell with a top, bottom and middle portion, with said middle portion divided into unitary sections capable of being inserted into and removed successively intact from the outer shell,

an agitator shaft extending through said middle portion,

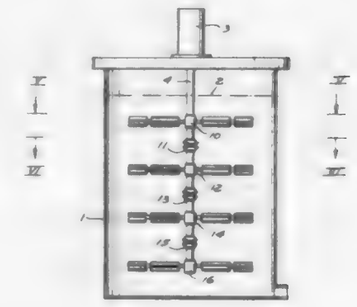
each section comprising a partition with a portion thereof within the inner shell which divides the section of the inner shell into upper and lower portions, the perimeter of the partition being sealed to the outer shell,

means which includes one opening in the partition connecting the space within the portion of the inner shell above the partition with the space below the partition which is between the inner and outer shells, and means which includes another opening in said partition connecting the space within the portion of the inner shell below the partition with the space above the partition between the inner and outer shells,

a diaphragm in each portion of the inner shell above and below the partition in each section, with an opening in each diaphragm occupied only in part by the agitator shaft,

an agitator fastened to the agitator shaft at approximately the junction line between each two sections and below the lower diaphragm of the upper of said two sections and above the upper diaphragm of the lower of these sections, with an opening through the inner shell in substantially the plane of the agitator.

3,374,989
METHOD AND DEVICE FOR PRODUCING UNIFORM DISPERSIONS
Erich Karl Todtenhaupt, Karlstrasse 8, Schopfheim, Baden, Germany
Filed Dec. 22, 1965, Ser. No. 515,648
Claims priority, application Dec. 29, 1964, T 27,724
5 Claims. (Cl. 259—107)

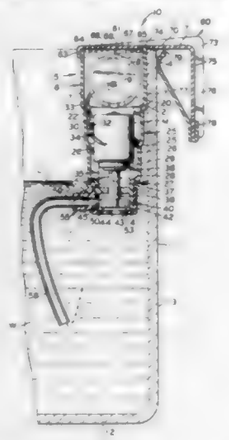


A uniform dispersion of subdivided material in a liquid is produced by confining a body of liquid which contains such subdivided material in an upright chamber of uniform unobstructed cross section throughout substantially the entire length thereof, and imparting to the subdivided material-containing body of liquid in the chamber in a plurality of superposed zones in radial and tangential direction a turbulent flow having in the axial direction of the chamber a component of movement of such strength as to cause intrusion of liquid from the respective zones into adjacent zones so as to create in the liquid of such adjacent zones eddy currents resulting in intimate mixing of the liquid and the subdivided material and information of a uniform dispersion; and a stirring device for carrying out the above process which comprises a single unobstructed upright chamber for the subdivided solids-containing liquid, with a shaft at least partially located and coaxial with the chamber, and a plurality of sets of stirring blades carried by the shaft within the chamber and located in the respective zones, whereby each of the sets of stirring blades comprises a plurality of blades respectively extending transversely of the shaft from the region thereof towards the periphery of the chamber and whereby consecutive blades in each set of blades are oppositely inclined with respect to an axial plane of the chamber, and each of the blades has a portion located in a common plane with a portion of a blade in an axially adjacent set and these portions of blades in adjacent sets are inclined to the common plane in mutually opposite directions.

3,374,990
AERATING APPARATUS
Richard L. Gray, Orrville, Ohio, assignor of one-half to Charles F. Herman, Orrville, Ohio
Continuation-in-part of application Ser. No. 372,941, June 5, 1964. This application Apr. 14, 1966, Ser. No. 542,500
3 Claims. (Cl. 261—29)

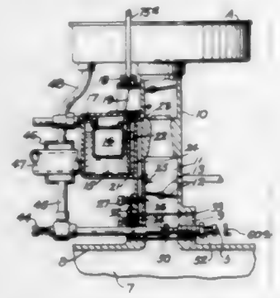
Apparatus for aerating liquid in a container constituting a housing enclosing a power supply, a motor, and an im-

peller having axial air and liquid inputs and a radial output with an extension discharging the fluids within the container liquid; and, a lid selectively attachable to the



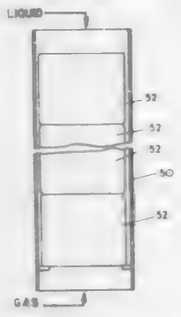
housing for detachably mounting it on the container and for insertion and removal of the power supply means.

3,374,991
CARBURETOR
Brooks Walker, 1280 Columbus Ave., San Francisco, Calif. 94133
Filed Mar. 12, 1965, Ser. No. 439,168
4 Claims. (Cl. 261—41)



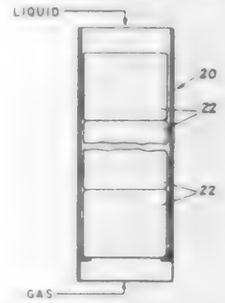
A carburetor for reducing the unburned hydrocarbons to reduce the smog producing components of an automobile engine exhaust. A conduit delivers a mixture of fuel and air to idle against a movable deflector near the center of the carburetor throat. Clean air is admitted when the deflector is moved against the end of the conduit to shut off the flow of fuel and air mixture.

3,374,992
GAS-LIQUID CONTACT APPARATUS
Kent Reaney Greer, Marple Bridge, England, assignor to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain
Filed Mar. 4, 1964, Ser. No. 349,456
Claims priority, application Great Britain, Mar. 4, 1963, 8,611/63
8 Claims. (Cl. 261—112)



1. A gas-liquid contact unit for apparatus in which a gas stream contacts a film of liquid flowing as a film over the surfaces of a contact unit, said unit comprising:
alternate flat and corrugated sheets of rigid thermoplastic organic polymeric material stacked in contact, the corrugations of each corrugated sheet having apices forming lines of contact with the flat sheets;
all the corrugated sheets defining with all the flat sheets a plurality of passages all of which extend from one common face of the stack to the opposite face;
the corrugations in the corrugated sheets following a curved path over a minor proportion of their length such that a straight line through said passages is intercepted by said curved path of said corrugations.

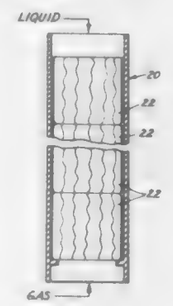
3,374,993
GAS-LIQUID CONTACT APPARATUS
Kent Reaney Greer, Marple Bridge, England, assignor to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain
Filed Mar. 4, 1964, Ser. No. 349,457
Claims priority, application Great Britain, Mar. 4, 1963, 8,612/63
5 Claims. (Cl. 261—112)



1. A gas-liquid contact unit for apparatus in which a gas stream contacts a film of liquid flowing as a film over the surfaces of a contact unit, said unit comprising:
alternate flat and corrugated sheets of rigid thermoplastic organic polymeric material stacked in contact, the corrugations of each corrugated sheet having apices forming lines of contact with the flat sheets;
all the corrugated sheets defining with all the flat sheets a plurality of passages all of which extend from one common face of the stack to the opposite face;
the corrugations in the corrugated sheets being straight throughout their entire length so that the said lines of contact and the passages are similarly straight;
the said lines of contact on opposite sides of each of the flat sheets crossing each other so as to be coincident at the cross over points;
the stack being held together by attachments between the corrugated sheets and the flat sheets at least some of the positions where the lines of contact on opposite sides of the flat sheets are coincident.

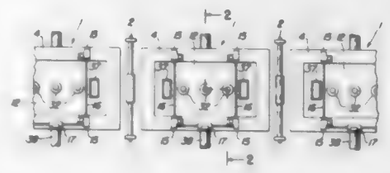
3,374,994
PACKING UNITS FOR GAS-LIQUID CONTACT APPARATUS
Kent Reaney Greer, Marple Bridge, England, assignor to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain
Continuation-in-part of application Ser. No. 211,377, July 20, 1962. This application May 4, 1966, Ser. No. 547,603
Claims priority, application Great Britain, Mar. 4, 1963, 8,612/63
6 Claims. (Cl. 261—112)

1. A gas-liquid contact unit for apparatus in which a gas stream contacts a film of liquid flowing as a film over the surfaces of a contact unit, said unit comprising:
alternate flat and corrugated sheets of rigid thermoplastic organic polymeric material stacked in contact, the corrugations of each corrugated sheet having apices forming lines of contact with the flat sheets;
all the corrugated sheets defining with all the flat sheets a plurality of passages all of which extend from one common face of the stack to the opposite face;
the corrugations in the corrugated sheets being curvilinear throughout substantially their entire length



so that the said lines of contact and the passages are similarly curvilinear;
the said lines of contact on opposite sides of each of the flat sheets being at least partially coincident; and
the stack being held together by attachments between the corrugated sheets and the flat sheets at at least some of the positions where the lines of contact on opposite sides of the flat sheets are coincident.

3,374,995
CONTINUOUS HEAT TREATING FURNACE
Eugene A. Cook, Jr., Montgomery County, Pa., assignor to Selas Corporation of America, Dresher, Pa., a corporation of Pennsylvania
Filed Dec. 20, 1965, Ser. No. 515,071
6 Claims. (Cl. 263—3)

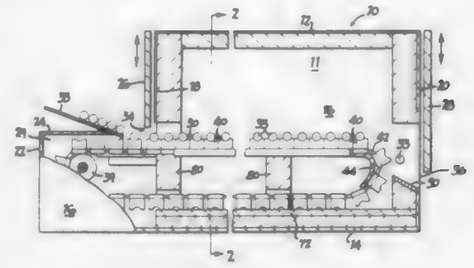


A barrel type furnace comprising a plurality of furnace units useful for heating structural steel shapes. The work is moved by a conveyor continuously through each unit, each unit having a chamber that is divided by the work into a plurality of substantially separate sub-chambers by the work. Burners firing into each sub-chamber can be individually adjusted to supply different amounts of heat to different portions of the work.

3,374,996
METHOD AND APPARATUS FOR CONVEYING WORKPIECES
William R. Keough, 124 S. Williamsbury, Birmingham, Mich. 48127
Filed Jan. 22, 1965, Ser. No. 427,422
11 Claims. (Cl. 263—8)

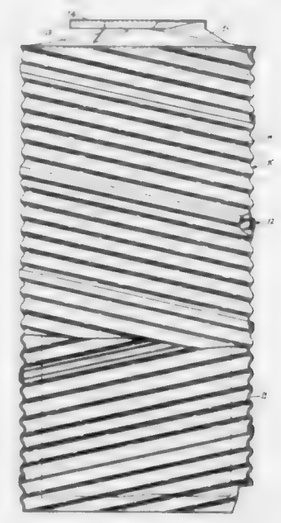
The invention includes conveyor apparatus for a heat treating furnace, the conveyor comprising a series of links interconnected loosely by separate tie members and looped around a driving means on the outside of the furnace and a stationary direction changing means on the inside of the furnace to provide a circulatory conveyor. The tie members are loosely disposed relative to the links so that the

links can be pushed along an upper skid structure in the material carrying phase of the conveyor movement with the links in surface-to-surface abutting relation and with the tie members exerting no driving force on the links. The links then pass around the stationary direction changing structure, and at this point the links separate from each



other and the tie members become engaged. The links are then pulled along a lower skid structure with driving force being transmitted from link-to-link by the tie members. The links thus travel through the work carrying phase of movement at one pitch, and travel through the return phase of movement at a different pitch.

3,374,997
ANNEALING COVER
Charles E. Stutenroth, Middletown, and Richard A. Wertz, Franklin, Ohio, assignors to Armco Steel Corporation, Middletown, Ohio, a corporation of Ohio
Filed May 13, 1965, Ser. No. 455,554
3 Claims. (Cl. 263—49)

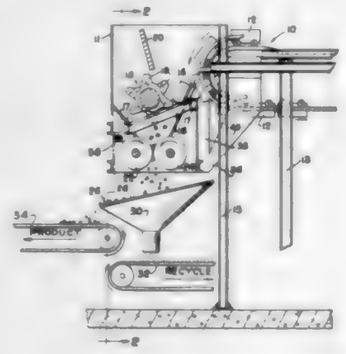


An inner cover which is placed over coils during box annealing in a single stack annealing furnace. The cover is cylindrical, vertically disposed and has helical corrugations to strengthen it. It is manufactured by corrugating stainless steel strip, continuously winding said strip helically, and joining the seams tightly together.

3,374,998
SINTER BREAKER AND ROLL CRUSHER
Harold T. Stirling, Pittsburgh, Pa., assignor, by mesne assignments, to Stirling Sintering Company, a corporation of Pennsylvania
Filed June 26, 1963, Ser. No. 290,717
2 Claims. (Cl. 266—21)

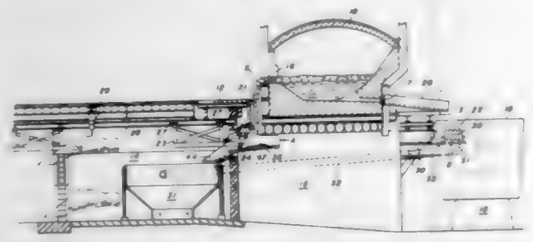
1. In combination, a sinter strand and a sinter breaker and roll crusher operatively associated with the discharge end of said sinter strand, said sinter breaker and roll crusher comprising a plurality of breaker bars, a rotatable

breaker wheel having radial arms thereon, said breaker wheel being so positioned that said radial arms pass between said breaker bars whereby sinter cakes falling from said sinter strand are broken into small pieces, a pair of rotatable crusher rolls beneath said breaker bars and positioned to receive between them and crush the small pieces of sinter passing through said breaker bars to form crushed sinter having a predetermined maximum size determined by the spacing between the crusher rolls, said crusher rolls being disposed in aligned parallel relationship and being adjustable towards and away from one another to adjust said maximum size, sizing means beneath said crushing rolls to receive crushed sinter therefrom and to remove material sized smaller than a predetermined size, a motor having a drive shaft, and a



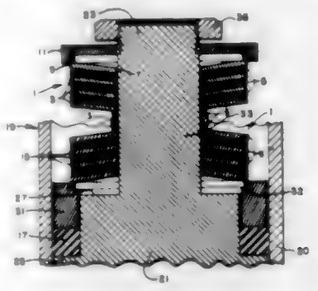
drive mechanism operatively associated with said motor to drive said breaker wheel and said crusher rolls, said drive mechanism comprising a relatively small pulley wheel attached to the drive shaft of said motor, a relatively large pulley wheel having a shaft extending therefrom, a pulley operatively associated with said pulley wheels to drive said relatively large pulley wheel, one of said crusher rolls being mounted on, and rotated by, said shaft, a first gear mounted on the far side of said shaft, a second gear interlocking with said first gear, a shaft extending from said second gear for driving the other crushing roll, a third gear interlocking with said first gear and having an intermediate shaft extending therefrom, a fourth gear on the far end of said intermediate shaft, a fifth gear interlocking with said fourth gear, and a shaft extending from said fifth gear for driving said breaker wheel.

3,374,999
SLAG-GRANULATING APPARATUS
Charles J. Burch, Lower Makefield Township, Bucks County, Pa., assignor to United States Steel Corporation, a corporation of Delaware
Filed Dec. 17, 1964, Ser. No. 418,966
12 Claims. (Cl. 266—24)



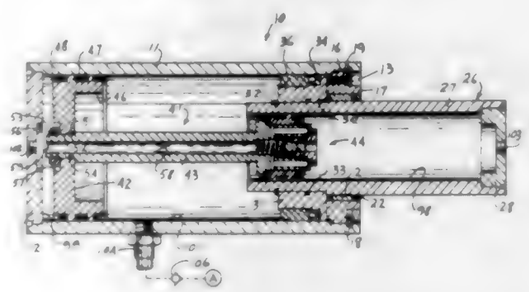
An apparatus for granulating slag from an open hearth furnace. Slag from the charging side of the furnace falls freely through a shell where water jets strike it and drive it into a surge tank. Slag from the tapping side travels through a runner beneath the furnace to the tank after water jets act on it.

3,375,000
BELLEVILLE SPRING ASSEMBLY
Robert E. Seamands, Moline, Ill., and Jimmy H. Williams, Bettendorf, Iowa, assignors to the United States of America as represented by the Secretary of the Army
Filed Jan. 4, 1966, Ser. No. 518,746
6 Claims. (Cl. 267—1)



An improved Belleville spring assembly is provided for a plurality of discs mounted in parallel, stacked array by disposing a bearing element between the inner and outer edges of adjacent discs thereby to reduce surface friction between the discs.

3,375,001
HYDROPNEUMATIC SPRING
Ransom J. Hennells, Plymouth, Mich., assignor to W. E. Hennells Company, Inc., Belleville, Mich., a corporation of Michigan
Filed May 4, 1966, Ser. No. 547,547
10 Claims. (Cl. 267—1)



1. A hydropneumatic die spring, comprising the combination:

an expandable first hydraulic chamber;

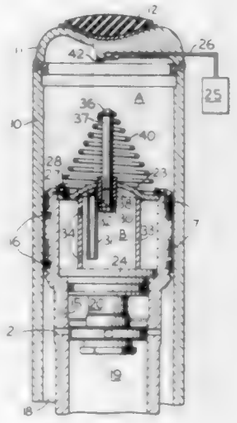
means defining a passage of reduced diameter extending from said first hydraulic chamber;

means defining a second expandable hydraulic chamber spaced along said passage from said first hydraulic chamber, said means defining said second hydraulic chamber being movable along said passage defining means toward said first hydraulic chamber for effecting contraction of said second hydraulic chamber and expansion of said first hydraulic chamber,

valve means disposed along said passage responsive to a preselected pressure drop from said second hydraulic chamber to said first hydraulic chamber for connecting said hydraulic chambers to each other and responsive to a drop of lesser magnitude in the opposite direction for placing said hydraulic chambers in communication with each other; and

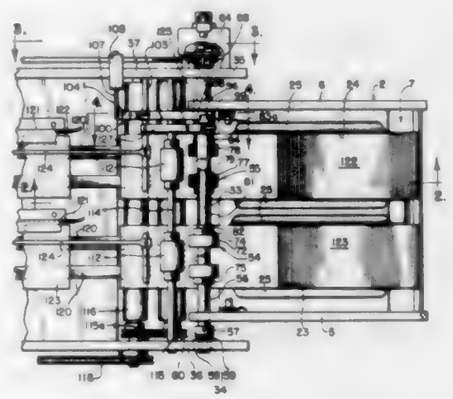
means defining a pneumatic chamber surrounding said passage defining means and disposed between said first and second hydraulic chambers, said pneumatic chamber being arranged for contraction upon movement of said second hydraulic chamber defining means toward the first hydraulic chamber.

3,375,002
VEHICLE SUSPENSION STRUT
Pearl L. Breon and Ralph H. Kress, Peoria, and Jackson C. Medley, East Peoria, Ill., assignors to Caterpillar Tractor Co., Peoria, Ill., a corporation of California
Filed Dec. 1, 1965, Ser. No. 510,836
4 Claims. (Cl. 267—65)



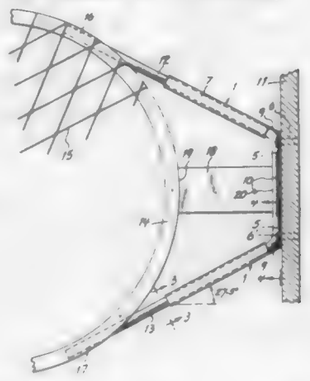
A suspension device for large vehicles having means for varying the stiffness or spring rate of a telescoping strut which utilizes air or gas as a cushioning means.

3,375,003
MULTIPLE FEEDER MECHANISM
Edward S. Godlewski, 531 Walnut St., Des Plaines, Ill. 62526
Filed Aug. 8, 1966, Ser. No. 570,944
10 Claims. (Cl. 271—9)



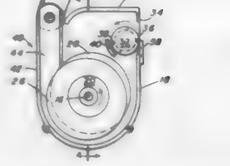
1. A plural feeding device comprising a plurality of side-by-side magazines each adapted to contain stock to be fed in synchronism to an associated receiving mechanism, a feed roller assembly associated with each magazine for discharging the stock therefrom item-by-item, common drive means for each said feed roller assemblies, clutch means between each feed roller assembly and said drive means for individually connecting and disconnecting the drive means thereto, pullout roller means disposed in grasping relation to stock items issuing from the respective feed roller assemblies, and means for declutching the clutch means to selected feed roller assemblies to permit free wheeling of said selected feed roller assemblies while the other of said assemblies continue to be driven whereby stock items not entirely discharged by the declutched feed roller assemblies are pulled out entirely by the pullout roller means while the clutched roller assembly is operating.

3,375,004
FOLD-UP BASKETBALL GOAL
John W. Ebstein, Roslyn Heights, N.Y., assignor to Gabriel Industries, Inc., New York, N.Y., a corporation of New York
Filed Dec. 15, 1965, Ser. No. 514,014
11 Claims. (Cl. 273—1.5)



1. A basketball goal comprising a pair of vertical spaced brackets, means for attaching the same to a backboard, a substantially horizontal tubular member along the top of each bracket, a substantially U-shaped rod held in said tubular members, and a hoop secured to the ends of said rod.

3,375,005
BALL THROWING MACHINE AND TARGET NET
Jay E. Cook, Ashland Road, Cockeysville, Md. 21030
Filed Aug. 17, 1965, Ser. No. 480,446
7 Claims. (Cl. 273—30)



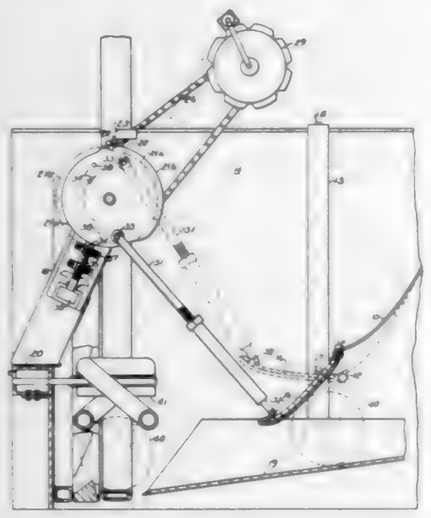
2. A ball gathering and projecting apparatus, comprising, a projector consisting of a flat hollow housing having a generally U-shaped internal configuration with a pair of side walls and rear and front walls, first motor means having a shaft extending into said housing, a rotor mounted on said shaft and arranged to fill the space between said sidewalls of said housing, a pair of flexible cheeks spaced slightly less than the diameter of a ball extending radially outward from said rotor and shaped eccentrically round at their peripheries, with one cheek of said pair of cheeks being mounted so as to extend its maximum point of eccentricity 180 degrees displaced around said rotor from that of the other cheek of said pair of cheeks, second motor means having a hollow cylindrical gate rotor immediately below an aperture formed in said front wall of said housing, said hollow cylindrical gate rotor having a pair of diametrically opposed apertures located therein, said housing having a curved guard attached to the interior thereof covering said pair of diametrically opposed apertures during a downward arc of their movement, said rearwall of said housing having upwardly divergent extensions of said sidewalls, with said extensions together with said rear wall forming a flaring upwardly extending rectangular nozzle, an open ended deflecting scoop means adjustably secured to the upper ends of said extensions and flared laterally in continuation of the flare of said nozzle, said scoop means having curved side walls and an arcuate top wall so as to direct said ball

when ejected into a desired trajectory which may be raised or lowered due to the adjustability of said scoop means, with the lateral flare of said scoop means permitting successive balls to emerge with considerable variations in azimuth, a table for mounting said projector, the rear area of said table being provided with a tapered mat having a central valley sloping into said aperture in said front wall, netting extending above three sides of said mat and across the front of said projector except for an opening through which the end of said scoop means protrudes, and a target pocket mounted in said netting.

3,375,006
MECHANICAL BACKSTOP FOR PIN SETTING MACHINES

Clyde F. Davis, Spokane, Wash., assignor to Quick Ball Return, Inc., Spokane, Wash., a corporation of Washington

Filed Aug. 12, 1965, Ser. No. 479,230
6 Claims. (Cl. 273—49)



1. A pit cushion assembly for an automatic pin and ball handling mechanism at the rear of a bowling alley, comprising:

a stationary framework;

a pit cushion on said framework extending transversely across the pit at the rear of a bowling alley, said cushion including a lower portion pivotally mounted on said framework about a horizontal transverse axis;

a member rotatably mounted on said framework about an axis parallel to said horizontal transverse axis;

linkage means operatively connected to said member and said lower portion of said pit cushion to initiate rotation of said member upon rearward swinging motion of said lower portion;

and drive means operatively connected to said member to continue to rotate said member about its axis, said drive means being responsive to initial rotational movement thereof caused by pivotal motion of the lower portion of said pit cushion thereby raising said lower portion to a ball passing position.

3,375,007
TABLE TOP FOOTBALL GAME

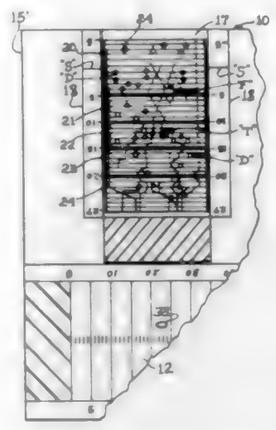
Joseph W. Meyer, 3850 N. Christiana Ave., Chicago, Ill. 60618

Filed Apr. 27, 1966, Ser. No. 545,741
7 Claims. (Cl. 273—94)

1. A table top football game for competitive playing between a designated offensive player and a defensive player comprising

(a) a plurality of transparent play cards each schematically illustrating a different type of offensive play,

(b) a set of defensive coordinate members each provided with a plurality of areas and each area having different defensive-position indicia thereon,

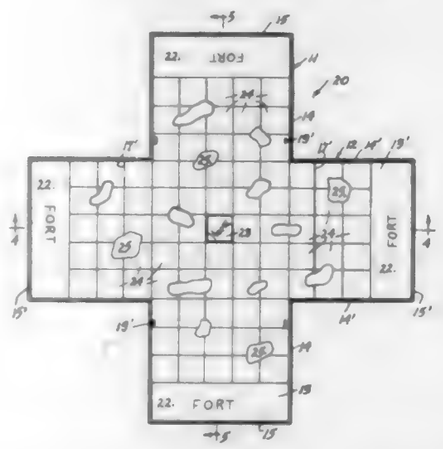


(c) means supporting each coordinate member for movement whereby each member may selectively display only a selected one of said areas at a time, said set of coordinate members being positioned in side by side relation, said set of coordinate members collectively providing a play card receiving area which when the areas of each coordinate member are in coplanar alignment supports a selected play card thereon with the defensive position indicia on each of said defensive coordinate members visible through said offensive play card to illustrate the results of the chosen offensive play and the selected defense thereto.

3,375,008
GAME WITH CRUCIFORM GAMEBOARD WHICH CONVERTS TO GAMEPIECE CONTAINER

Wallace E. Atkinson, R.F.D. 3, Box 362 B11, Petersburg, Va. 23803

Filed Aug. 12, 1965, Ser. No. 479,082
5 Claims. (Cl. 273—101)

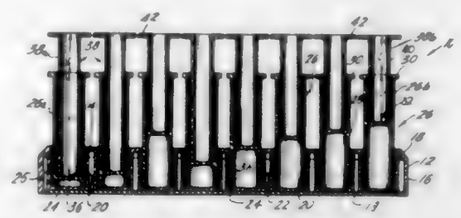


An elongated box consisting of two box members each including a panel with perpendicular side and end walls. Intermediate portions of the side walls are swingable into coplanar relation with the panel to form recesses which permit one box member to be placed across the other to provide a cruciform gameboard with upstanding perimetric walls. Game pieces movably positioned on the gameboard are intended to be shot at by opposing players using hand-held guns.

3,375,009
PEG LEVELING GAME

Albert Stubbmann, New Hyde Park, and Frank Kohner, New York, N.Y., assignors to Kohner Bros., Inc., East Paterson, N.J., a corporation of New York

Filed Sept. 16, 1965, Ser. No. 487,806
9 Claims. (Cl. 273—156)

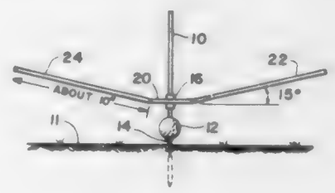


1. A peg leveling game including a game board with a group of upwardly opening primary wells therein, a set of base pegs of a number equal to the number of primary wells, each base peg having a lower section snugly removably interchangably received in any one primary well so as to support the base peg in vertically erect condition, a group of upwardly opening secondary wells one in each base peg, and a set of upper pegs, each upper peg having a lower section snugly removably interchangably received in any one secondary well so as to support the upper peg in vertically erect condition, one group of wells each having the same depth and the other group of wells each having a depth different from one another, one set of pegs being all of like external dimensions including their lengths and the other set of pegs being of like external dimensions but being of lengths different from one another, the pegs of the set of pegs receivable in the wells of different depths being each of a different length such that when selected upper pegs are nested within certain pegs and said corresponding base pegs are received in certain primary wells, the tops of the upper pegs will lie in the same horizontal plane.

3,375,010
GOLF SWING TRAINING DEVICE

Albert E. Panza, 1512 Middle St., Sharpsburg, Pa. 15215

Filed May 14, 1964, Ser. No. 367,363
1 Claim. (Cl. 273—186)

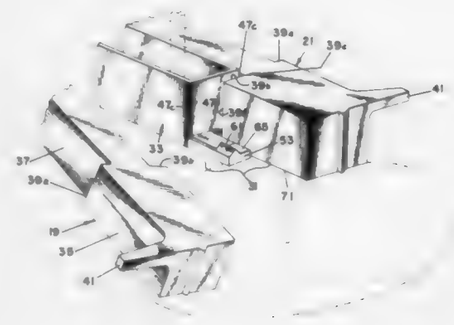


1. A golf training and practice device comprising an elongated first rod-like member adapted to be vertically positioned on the side of a golf ball opposite a golfer about to strike the ball with the head of a golf club, an elongated rod-like second member secured to said first member at right angles thereto and arranged to project horizontally outwardly toward and above said golf ball when the first member is in a vertical position, said second member being adjustable along the length of said first member, a third member having a first generally C-shaped section connected at its midpoint to the end of the second member opposite said first member and having its parallel legs arranged to point toward the golfer in a generally horizontal plane, and rod-like sections connected to the ends of said legs and respectively adapted to project beyond and behind a golf ball in the path of the club head in striking the ball, said last-mentioned rod-like sections being inclined upwardly from their points of connection to the ends of said legs at an angle of about 15° with respect to the horizontal, the last-mentioned rod-like sections both being about ten inches in length and the span of the C-shaped section between said parallel legs being about four inches.

3,375,011
DUAL DETENT MECHANISM FOR A PORTABLE RECORDER-REPRODUCER

Jack L. Kelly and Ronald K. Wiandt, Decatur, Ill., assignors to General Electric Company, a corporation of New York

Filed Jan. 25, 1967, Ser. No. 611,711
8 Claims. (Cl. 274—23)

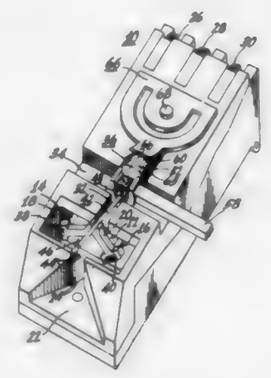


A detent mechanism for a recording and reproducing device, which involves the resilient cooperation of a single detent element with a recording arm and a playback arm.

3,375,012
PHONOGRAPH PICKUP DEVICE

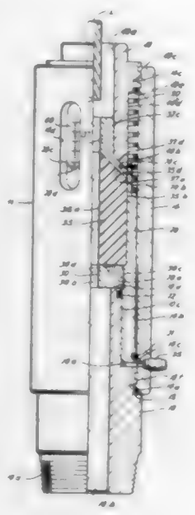
David E. Laux and Jack M. White, Indianapolis, Ind., assignors to Radio Corporation of America, a corporation of Delaware

Filed Jan. 22, 1965, Ser. No. 427,259
6 Claims. (Cl. 274—37)



The stylus arm of a phonograph pickup extends from a damping block of a resilient material. The damping block is positioned in a channel opening in a turnover type receptacle. The side and bottom walls defining the receptacle opening restrain vertical and lateral movement of the block when the pickup is in its 33 or stereo mode of operation, and restrain substantially only lateral movement of the block when the pick-up is in its 78 or mono mode of operation.

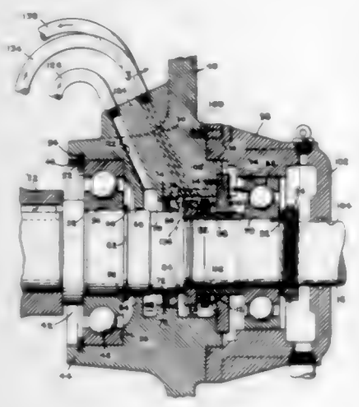
3,375,013
FLUID-ACTUATED WIPER APPARATUS
Charles A. Grantom, Houston, Tex., assignor to King Oil Tools, a corporation of Texas
Filed Sept. 20, 1965, Ser. No. 488,673
3 Claims. (Cl. 277—2)



A fluid-actuated wiper apparatus wherein a resilient annular wiping element is confined on the outside by a piston before and during compression, and wherein the housing is a substantially cylindrical sleeve with threaded connections at its upper and lower ends to provide ready accessibility of all parts for replacements or repair.

Various efforts have been made in the past to provide wiping or stripper apparatus. See, for example, United States Patents Nos. 2,559,321; 2,927,638; 3,013,825; and 3,129,009.

3,375,014
SEAL ASSEMBLY
Donald E. Chubb, Caldwell, N.J., Angelo C. Giurlando, Muskego, Wis., and Raymond E. Rayner, Colonia, N.J., assignors to Worthington Corporation, Harrison, N.J., a corporation of Delaware
Filed Feb. 9, 1966, Ser. No. 526,119
10 Claims. (Cl. 277—3)



5. A mechanical seal for a rotatable shaft extending into a housing comprising:

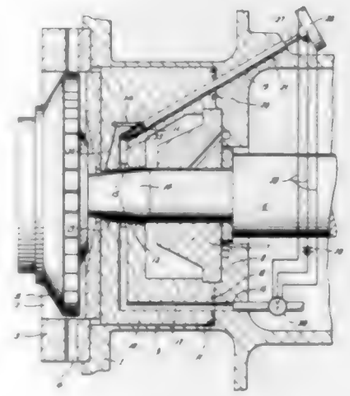
(a) two axially spaced sealing members mounted between the housing and the shaft;

(b) an annular chamber formed in the housing between the sealing members;

(c) an inlet port and an outlet port in the chamber for circulating lubricating oil through the chamber when the shaft is rotating, the inlet port being circumferentially spaced a relatively short distance from the outlet port in the direction of rotation of the shaft; and

(d) a longitudinally extending inwardly projecting baffle in the chamber between the inlet and the outlet ports to prevent oil flow directly from the inlet to the outlet port.

3,375,015
SHAFT SEAL EMPLOYING SEAL GAS WITH MEANS FOR INDICATING PROPER FLOW THEREOF
Judson S. Swearingen, 500 Bel Air Road, Los Angeles, Calif. 90024
Filed Sept. 30, 1966, Ser. No. 583,186
9 Claims. (Cl. 277—3)

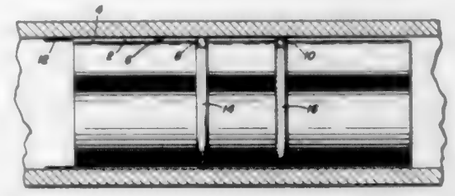


1. In combination with a shaft, a wall having an opening therein through which said shaft extends, and a seal arrangement for preventing leakage of a retained gas from one side of said wall to the other through a clearance between said shaft and said wall, comprising means for introducing into the clearance between the ends of the opening a seal gas at a temperature different from that of the retained gas to seal the clearance against leakage of the retained gas therethrough, the improvement which comprises a temperature sensing device, and means responsive to a pressure differential between the retained gas and the seal gas at the point of its entry into said clearance to subject the sensing device to the effect of the temperature of either one of said gases having the greater pressure, whereby inadequacy of the pressure of the seal gas to prevent leakage of the retained gas will be shown by a temperature indication closer to the temperature of the retained gas and such predominance of the pressure of the seal gas as would cause flow thereof toward the retained gas will be shown by a temperature indication closer to the temperature of the seal gas.

3,375,016
TWO-STAGE SEAL ARRANGEMENT
John Jellinek, Washington, D.C., and Louis B. Weckesser, Jr., College Park, Md., assignors to the United States of America as represented by the Secretary of the Navy
Filed Mar. 9, 1964, Ser. No. 350,624
4 Claims. (Cl. 277—58)

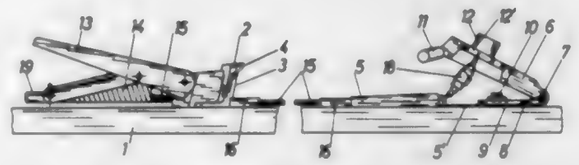
1. In combination with a pair of concentric members having a circumferential clearance therebetween, a two-stage sealing arrangement, comprising

a sealing ring in said clearance, said sealing ring having a coefficient of thermal expansion substantially greater than that of either of said members and being heat expandible into sealing engagement with each of said members by heat dissipating from a heated fluid flowing through one of said members and providing a permanent seal against the flow of the heated fluid through said clearance, and



an elastomeric sealing ring in said clearance and initially sealing against flow of said heated fluid therethrough until said heat expandible ring sealably engages each of said members.

3,375,017
SKI BINDING
Friedrich Beier, Gratschenwinkelweg 25, Kurort Igls, Tirol, Austria
Filed Nov. 22, 1966, Ser. No. 596,322
Claims priority, application Austria, Nov. 26, 1965, 10,648/65
4 Claims. (Cl. 280—11.35)



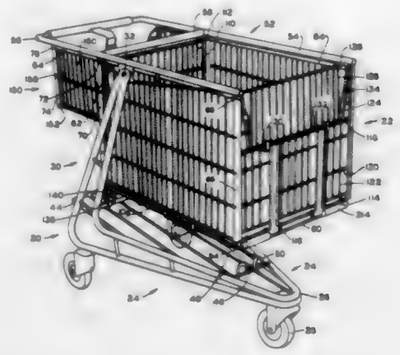
1. A ski having a longitudinal axis and comprising a fixedly supported toe rest, a clamping lever pivotally supported forwardly of said toe rest, a fixed heel rest rearwardly of said toe rest and adapted to support the heel of the boot with the toe of the latter in contact with the toe rest, a guiding plate supported for free longitudinal displacement rearwardly of said heel rest, a clamping jaw supported on said guiding plate for pivotal movement towards and away from said heel rest for contacting the heel of a boot supported thereon, said clamping jaw having an initial position inclined upwardly and forwardly on said ski, a cable extending from said clamping lever to said clamping jaw for pivotally moving the latter and concurrently displacing the guiding plate upon pivotal movement of the clamping lever, said cable passing under the toe rest and heel rest and then passing beyond the heel rest directly to the clamping jaw along a substantially straight line, said cable being secured to the clamping jaw, and a spring to exert a force on the clamping jaw to displace the same away from said heel rest when the clamping lever is pivotally moved; said guiding plate, apart from said free longitudinally displacement, being also supported for rotation in a plane substantially parallel to the running surface of the ski.

3,375,018
PARALLELOGRAM CART
Garth Close, Lubbock, Tex., assignor to United Steel and Wire Company, Battle Creek, Mich., a corporation of Michigan
Filed June 15, 1966, Ser. No. 557,809
28 Claims. (Cl. 280—33.99)

28. A wheeled cart comprising:

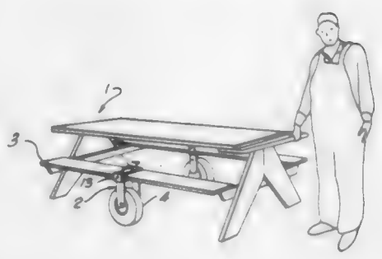
a nestable frame and a plurality of wheels supporting same;

a basket supported by said frame above said wheels, said basket having end walls and further having side walls; comprised of members articulated to permit parallelogrammed collapsing of said side walls of said basket, the collapsed basket occupying a zone primarily between said wheels;



whereby frames of successive ones of such wheeled carts are adapted for nesting while the collapsed baskets thereof pack one against the next.

3,375,019
WHEEL DEVICE FOR MOVING PICNIC TABLES
Patrick F. O'Day, P.O. Box 867, Bridgeport, Wash. 98813
Filed May 5, 1966, Ser. No. 548,364
5 Claims. (Cl. 280—47.32)



1. A wheel device for moving picnic tables comprising:

(a) a vertically adjustable, elongated clamp;

(b) a clamp locking member secured to said clamp;

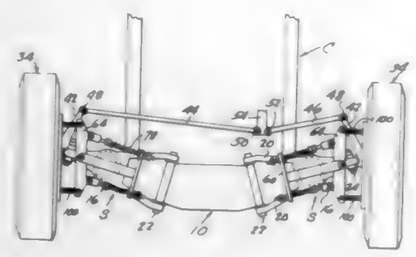
(c) a vertically adjustable support secured at an end thereof to said clamp and extending downwardly therefrom; and

(d) a wheel rotatably mounted on said support at an end opposite said clamp, said wheel disposed so that the axis of rotation thereof is parallel to the long axis of said clamp member.

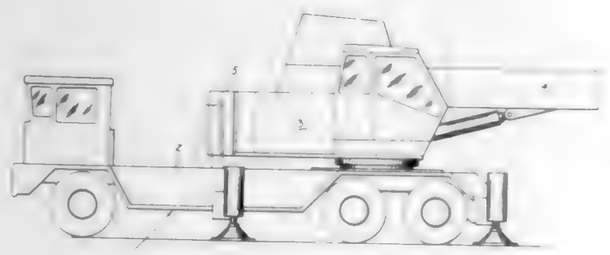
3,375,020
STEERING GEAR STABILIZERS FOR KNEE-ACTION MOUNTED WHEELS
Lester A. Worsham, P.O. Box 559, Cedartown, Ga. 30125
Filed June 10, 1966, Ser. No. 556,720
9 Claims. (Cl. 280—96.2)

For use with vehicles having a chassis with a cross member extending widthwise of and connected to said chassis, said cross member having a wheel backing member pivoted adjacent one end thereof for steering movement relative to said cross member; a stabilizer comprising a base member secured to said cross member inwardly from said wheel backing member and having at least a portion extending outwardly from the connection; an arm

substantially medially pivoted to the outer end of said base member; rods pivoted adjacent the ends of said arm and slidably received in the inner end of said base member; compression springs on said rods mounted to resist tilting of said arms about said pivot and tension springs connecting said arm to said wheel backing member.



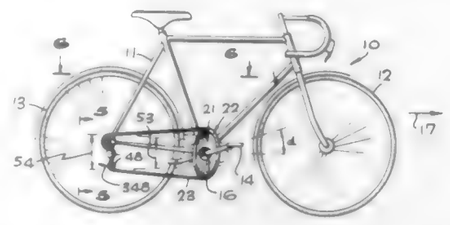
3,375,021
COUNTERWEIGHT REMOVAL DEVICE
Lyle D. Grider, New Berlin, Wis., assignor to Bucyrus-Erie Company, South Milwaukee, Wis., a corporation of Delaware
Filed May 20, 1966, Ser. No. 551,606
3 Claims. (Cl. 280—150)



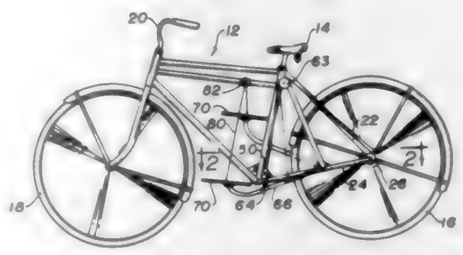
A transit crane includes a working frame with a counterweight removably mounted at the lower rear edge thereof. A pair of levers are vertically pivotally mounted intermediate their ends at the rear of the frame, and have their upper ends releasably connected to the counterweight. A pair of double acting hydraulic cylinders are connected and operable between subframe units and the lower ends of the levers to pivot them between a generally vertical, mounted position in which the counterweight is raised and against the frame and a generally horizontal, dismounted position in which the counterweight is lowered and removed from the frame. The points of connection of the levers to the counterweight are above and slightly forward of the points of connection of the levers to the frame when the counterweight is mounted to have an over center effect, and the levers have extensions which extend forwardly when the counterweight is mounted and are releasably connected to the frame to lock the counterweight in place.

3,375,022
DRIVES FOR BICYCLES
Mark Hattan, Pasadena, Calif., assignor of one-fourth to William P. Green, Pasadena, Calif.
Filed Dec. 14, 1965, Ser. No. 513,699
16 Claims. (Cl. 280—238)

A bicycle drive having an elliptical main pedal driven sprocket wheel carrying a correspondingly elliptical and slightly oversized deflector at the outer side of the sprocket wheel, with the teeth of the sprocket wheel having camming surfaces for camming an engaged chain laterally outwardly, while the deflector has a camming surface for deflecting the chain in an opposite laterally inward direction.

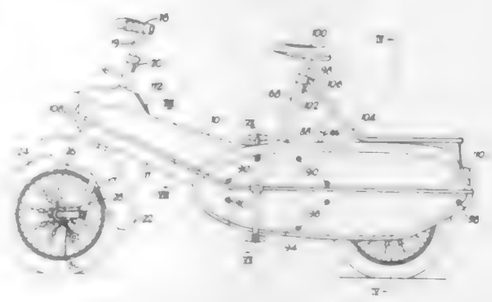


3,375,023
VELOCIPEDE DRIVING APPARATUS
James W. Cox, P.O. Box 193, Upper Lake, Calif. 95485
Filed Nov. 12, 1965, Ser. No. 507,419
1 Claim. (Cl. 280—251)



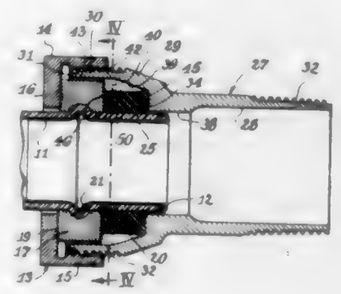
A pedal operated drive system for wheeled vehicles wherein the pedals are mounted on levers constrained for alternate pivotable movement. A drive train including a pair of over-running clutches for transmitting the pivotable movement of the levers to unilateral torque at the vehicle wheel.

3,375,024
BICYCLE FRAME
Benjamin George Bowden, Export, Pa., assignor to Mary Nora (Noreen) Bowden
Filed Feb. 8, 1966, Ser. No. 525,885
8 Claims. (Cl. 280—281)



A bicycle having a frame which includes an elongated upper member of inverted U-shaped cross section. A front wheel assembly including the wheel fork and steering post is supported in the front end of the upper frame member, and a mechanism unit is secured within the U-shaped upper frame member near its center. The mechanism unit has a separate housing and mounts therein a drive sprocket, a saddle post and a horizontally extending torsion bar. A rearwardly extending rear wheel suspension fork is carried by the torsion bar and a rear wheel and sprocket are mounted in the rear end of the suspension fork. Lower frame members extend across between the edges of the U-shaped upper frame member at the part of the frame located forwardly of the mechanism unit and downwardly from the rear part of the frame to enclose the mechanism unit and partially enclose the rear wheel.

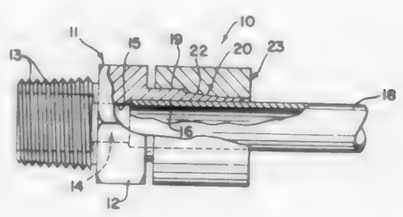
3,375,025
FITTINGS AND COMBINATIONS OF CONDUITS THEREWITH MAKING OR ADAPTED TO MAKE FLUID-TIGHT SEALS THEREWITH
Edward G. Engel, Westfield, N.J., assignor to Yara Engineering Corporation, Elizabeth, N.J., a corporation of New Jersey
Filed July 15, 1964, Ser. No. 382,909
7 Claims. (Cl. 285—15)



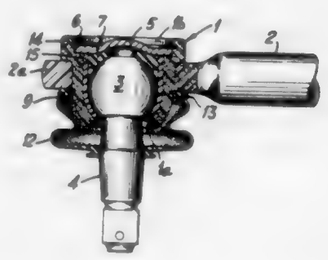
1. A combination comprising a pressure-deformable synthetic resinous plastic conduit, rigid sleeve first means located in one end of said conduit, rigid circumferential second means extending around said conduit and said first means, one of said means having a circumferential recess, a portion of said conduit being in said recess, said portion having a recess, the other of said means including a circumferential part disposed in said second mentioned recess, pressure-deformable rubbery resilient third means extending around said conduit and said sleeve, a body member and a member operatively connected with said body member, said third means disposed between a face of one of said means and a face of one of said members, one of said members being axially movable with respect to the other to reduce the distance between said faces thereby to apply axial pressure of at least 50 pounds per square inch to said third means to store sufficient energy therein that said third means will exert sufficient pressure on said conduit to provide effective sealing, said first and second means cooperating with each other to maintain said part in said second mentioned recess to prevent substantial axial movement of said end of said conduit with respect to said first and second means.

3,375,026
TUBE COUPLING
Zoltan Szohatzky, Mentor Township, Ohio, assignor to Crawford Fitting Company, Solon, Ohio, a corporation of Ohio
Filed Oct. 21, 1965, Ser. No. 499,433
1 Claim. (Cl. 285—322)

A wedge type tube coupling for miniaturized tubing. The coupling comprises a body member having a fluid passageway therethrough. A longitudinally extending gripping element integral with said body member is defined by an external tapered surface extending from the body to a free end of the gripping element. Adjacent the gripping element there is defined an external circular cylindrical surface. A circular cylindrical bore is defined in the gripping element to receive a tube. An annular coupling member is disposed about the tube. The annular coupling member is defined by a circular cylindrical bore having a diameter substantially equal to the outside diameter of the tube plus twice the transverse thickness of the free end of the gripping element. The annular coupling member is also defined by a counterbore having a diameter substantially equal to the diameter of the external circular cylindrical surface of the body. A tapered mouth portion is defined in the annular coupling member interconnecting the counterbore with the bore. Upon advancement of the coupling member over the external cylindrical surface of the body, mating engagement of the tapered surface of the body and the tapered mouth portion of the annular coupling member takes place to thereby deform the gripping element into engagement with the exterior of the tubing. Since the length of the tapered mouth portion of the annular coupling member is less than the length of the tapered surface of the body, full advancement of the coupling member over the external cylindrical surface of the body will cause the free end of the gripping element to be received within the bore of the annular coupling member.



3,375,027
UNIVERSAL JOINT CONSTRUCTION HAVING HOUSING OF EPOXY RESIN
Jürgen Ulderup, Bergstrasse, Lemforde, Hannover, Germany
Filed Mar. 24, 1965, Ser. No. 442,427
Claims priority, application Germany, Apr. 24, 1964, U 10,676
5 Claims. (Cl. 287—90)



The construction of a universal joint is disclosed herein in respect to a single embodiment. The universal joint includes a housing forming a socket for supporting a hinge pin for universal pivotal movement. The universal joint is provided for connecting steering linkages as well as axle and guide elements of motor vehicles, and in accordance with the invention the housing is formed of an epoxy resin material to which hardeners have been added, that is, chemical substances which are connected with the epoxy resin as a reaction partner by poly-addition or by polymerization into a high molecular spatially cross-linked state. In addition to the chemical hardners, fillers are added to the epoxy resin in order to improve the mechanical properties of the end product such as the

hardeners, the abrasion resistance and thermal resistance. For such purpose, mineral materials such as quartz or ground shell, chalk, sand and materials in fiber form such as glass fibers are added.

In accordance with a further feature of the invention, the housing is formed with an annular indentation in order to provide a support for a ring member which tightly secures a linkage member around the housing in a position against a shoulder formation at the top thereof. In addition, the annular ring member supports one end of a boot seal which is engaged at its opposite end around the body portion of the hinge pin of the universal joint.

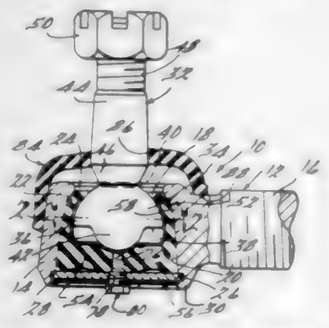
The universal joint housing produced in accordance with the invention is characterized by high mechanical strength and is thus excellently suitable for replacing conventional steel housings or plastic housings which have been reinforced by metal inserts. The housings also provide excellent resistance to grease and other harmful substances. It may be cast and will have a characteristic of high stability in dimension and form.

3,375,028

BALL JOINT FOR TIE ROD OR THE LIKE

De Lane D. Patton, Worthington, Ohio, assignor to Columbus Auto Parts Company, Columbus, Ohio, a corporation of Ohio

Filed June 24, 1965, Ser. No. 466,771
13 Claims. (Cl. 287—90)



A flexible joint construction comprising a housing section having an open end cavity defining a frusto-conical shaped side wall; a stud member extending through the opening in the housing section and having a head section located within the cavity, the head section comprising first and second hemi-spherical portions; a seat member disposed within the cavity and having a lower section having a central hemi-spherical recess complementary to and adapted to receive one of the portions of the head section, the seat member also comprising an upwardly extending wall section interposed between the head section of the stud member and the side wall of the housing section; the side wall including a pair of radially spaced spherical surface portions defined by radial lines having their centers located at axially spaced positions within said cavity, the seat member being formed with a plurality of grooves for retaining lubricant adjacent the head section of the stud member.

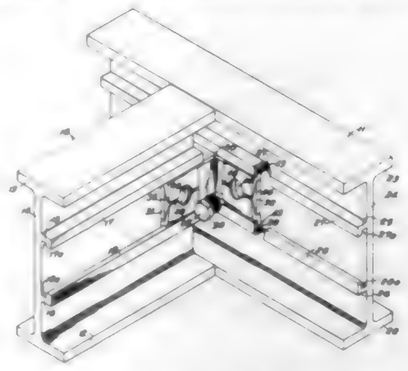
3,375,029

MEANS FOR CONNECTING STRUCTURAL MEMBERS

John S. Frye, 3098 Trafalgar, Chamblee, Ga. 30005, and James B. Fuss, 3245 Enon Road, College Park, Ga. 30022

Filed Dec. 22, 1966, Ser. No. 603,985
8 Claims. (Cl. 287—189.35)

A means for connection structural members of the type utilized to connect together I-beams, or similar structural shapes, in a single plane. The members to be connected together include a pair of holding members. The connector comprises an L-shaped bracket adapted to have its legs positioned between the grooves of adjacent structural shapes, and a pair of expanding locking elements adapted



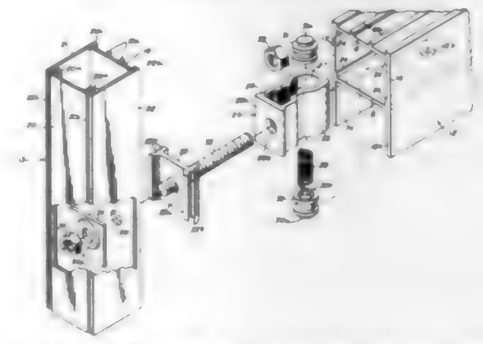
to connect a leg of the bracket to the grooves of each structural shape.

3,375,030

JOINT CONSTRUCTION FOR DOORS, WINDOWS AND THE LIKE

Alex S. Thompson, Irving, Tex., assignor to Southern Extrusions, Inc., Magnolia, Ark., a corporation of Arkansas

Filed Nov. 6, 1964, Ser. No. 409,401
11 Claims. (Cl. 287—189.36)



1. A construction for joining two frame members in rigid angular relation comprising, in combination, a first frame member having a box section wtih an inside web wall, an outisde web wall and spaced side walls, said inside web wall having a stud receiving aperture therethrough, said spaced side walls projecting in spaced relation outward of said inside web thereby leaving a recess in said first frame member, a second frame member having a box section with an inside web wall, an outside web wall and spaced side walls for abutting contact with the respective side walls of the first frame member, said web walls of the second frame member having apertures therethrough for receiving bushing members therein, a block assembly received in said second frame member box section and having a housing member narrower than the distance between said side walls and having a bore therethrough, a compression spring in the bore and a bushing in each end of the bore received in said apertures in the web walls of the second frame member as the compression spring urges said bushings outwardly of the housing thereby positioning sad housing member for pivotal movement, said housing having means for securing a stud thereto; a stud received in said securing means and projecting outward of said box section for reception by said aperture in the first frame member; an apertured stabilizer block slidably received over said stud and having a portion received in said recess in the first frame member between said projecting side walls and a portion received in said box section of the second frame member whereby the end of the second frame member is closed, said second frame member on receiving the bushings in the apertures in its webs being totally closed by its webs and side walls; and

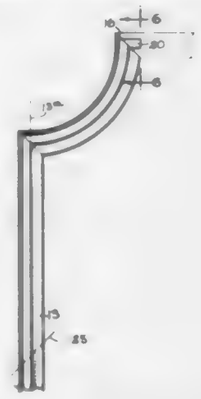
means received on said stud within the box section of the first frame member and applying tightening pressure between the stud and the inside face of the inside web of said member for securing said frame members in aligned abutting rigid angular relation.

3,375,031

ORNAMENTAL TRIM FOR DOOR PANELS

Carl J. Dargene, Rockford, Ill., assignor, by mesne assignments, to Amerock Corporation, Rockford, Ill., a corporation of Connecticut

Filed Aug. 26, 1965, Ser. No. 482,694
1 Claim. (Cl. 287—189.36)



1. A trim assembly for attachment to panels, comprising, in combination, a plurality of trim strips adapted to be joined together to form the trim assembly and having first and second ends of the same width and extending in substantially parallel directions, each of said strips including a straight section extending from the first end thereof and being of the same width along a predetermined length forming the longitudinal axis of the strip, said strip first and second ends being beveled at complementary angles to the strip longitudinal axis for forming a right angle corner when the strips are joined first end abutting a second end of an adjoining strip, each said strip having a corresponding side adapted to abut the panel for attachment thereto with a uniform undercut cross-sectioned groove in said one side running longitudinally along the strip straight section and opening into said beveled first end, a tab extending from said beveled second end at right angles to the strip longitudinal axis and positioned to interfit within a groove to form a flat, continuous surface with the back of the strips; when the strips are joined, first end abutting a second end of the adjoining strip, and said tab having a cross-section complementary to the cross section of the groove and a lateral width substantially greater than its front to back depth and fit therein with a snug but removable fit whereby said strips can be cut to length by severing the straight portion at any point at an angle complementary to the angle of the second end and thereafter be interlocked together to form a trim assembly by inserting said tabs in said grooves as the strips are joined with the first and second ends abutting to hold said strips together while the strips are attached to a panel.

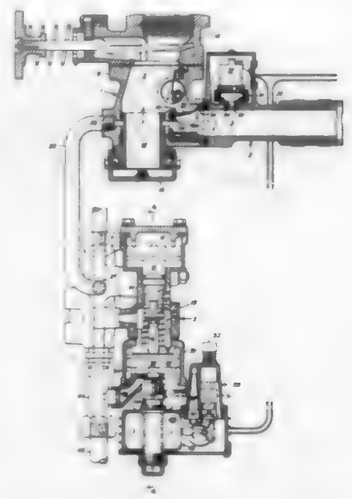
3,375,032

FLUID ACTUATED LOCOMOTIVE SANDING SYSTEM

Virgil L. Frantz, Salem, Va., assignor to Graham-White Sales Corporation, Salem, Va., a corporation of Virginia

Filed Nov. 27, 1963, Ser. No. 326,449
10 Claims. (Cl. 291—12)

1. A sanding system comprising a sander, a discharge pipe connected to said sander for receiving sand therefrom, means for sensing a clogging condition in said pipe, means responsive to said sensing means for applying air under high pressure to said pipe to remove said condition, and means for cutting off said air after a predetermined interval.



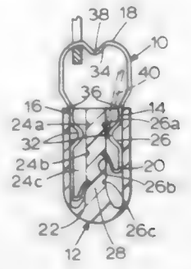
6. A sanding system comprising a sander, a discharge pipe connected to said sander for receiving sand therefrom, a control valve, a differential piston in said valve shiftable from a position to cut off air to said pipe alternately to positions to apply high pressure clean-out and low pressure sanding air to said pipe, an override piston connected to said valve and operable to override the setting of and shift said differential piston from sanding to clean-out position, a pressure sensitive switch for sensing a clogging condition in said pipe, a solenoid valve in circuit with and responsive to said sensing switch for operating said override piston, and by shifting thereby of said differential piston to clean-out position applying clean-out air to said discharge pipe to remove said condition, and thermal switch means in the circuit of said switch and solenoid valve for breaking said circuit after a predetermined interval and thereby cutting off said clean-out air application to remove said condition.

3,375,033

PADLOCK-TYPE SEAL WITH ANTI-TAMPERING MEANS

Sigurd M. Moberg, East Orange, N.J., assignor to E. J. Brooks Company, Newark, N.J., a corporation of New Jersey

Filed May 9, 1966, Ser. No. 548,493
2 Claims. (Cl. 292—320)



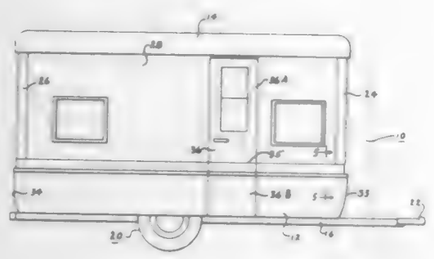
A padlock-type of seal includes a U-shaped shackle of stiff, spring-steel wire, having ends fixed to and held within a housing when the seal is locked. An external loop portion of the shackle includes two approximately quarter-circular portions adjoining each other at an inwardly extending, sharply-reversely bent portion of the shackle located approximately midway of the opposite limits of the loop portion to localize bending at said reversely bent

portion and induce breakage at the latter portion upon an attempt to pull the shackle from the housing. Further assurance that such breakage will occur may be achieved by providing a weakening score in the shackle at the sharply-reversely bent portion.

3,375,034
PIPE-PULLING TOOL
William H. Blackshear, Mineral Wells, Tex.
(P.O. Box 42, Garner, Tex. 76042)
Filed Nov. 3, 1966, Ser. No. 591,736
5 Claims. (Cl. 294—86.24)

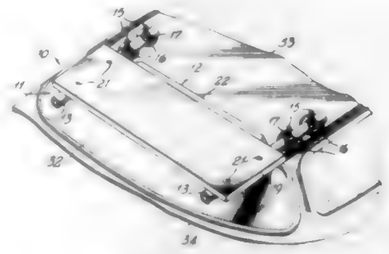
1. A pipe-pulling tool comprising, in combination, a head member having a hole therein, a radio receiver within said hole, an elongated cylinder extending downwardly from the bottom portion of said head member and cooperating with said hole, an intake and exhaust valve secured to the bottom portion of said receiver and electronically activated by it, an elongated air channel unit having a plurality of perforations therein secured within said cylinder, friction grips comprising a manifold enclosing said air cylinder and being adapted to expand and collapse in accordance with the supply of air and withdrawal thereof through perforations of said channel unit activated by said valve, and a centering cone secured to the bottom portion of said friction grip units and said air cylinder.

3,375,035
FOLDABLE TRAILER
Harold B. Schultz, 1820 E. Colfax,
South Bend, Ind. 46617
Filed Nov. 26, 1965, Ser. No. 509,985
5 Claims. (Cl. 296—27)



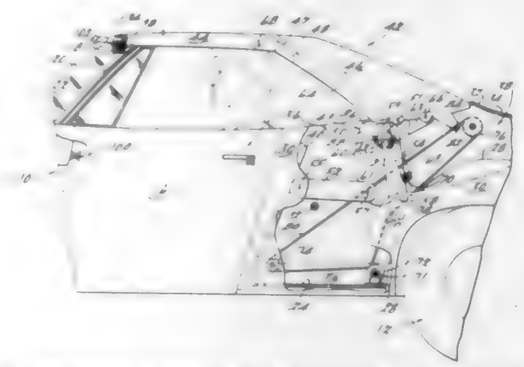
A trailer having a body, a top adapted to be raised from and lowered onto the body. Walls are pivoted to the upper edges of the body, and a spring means including torsion bars is used to assist in raising the pivoted walls when the top is raised. In practice, the pivoted walls would normally be the end walls of the trailer.

3,375,036
WINDSHIELD WEATHER VISOR
John P. Francis, 20 Boston St., Haverhill, Mass. 01830
Original application Jan. 3, 1966, Ser. No. 518,484. Divided and this application Dec. 13, 1966, Ser. No. 619,095
2 Claims. (Cl. 296—95)



This invention provides weather protection to the windshield of an automobile when the vehicle is in a parked position. The removably attached rain visor panel, and the removably attached longitudinally disposed visor supports with the attached roof engaging means, may be removably attached as a complete unit, or in part, to or from the roof top of the automobile. The rear laterally disposed vertical weather flap of the visor panel freely engages the roof top to provide rain sealing engagement.

3,375,037
RETRACTABLE HARDTOP
Letcher B. Hunt, Jr., Rochester, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware
Filed May 23, 1966, Ser. No. 552,001
8 Claims. (Cl. 296—117)

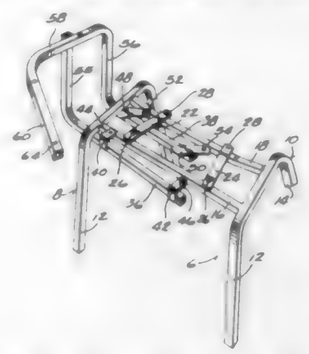


A retractable hardtop roof structure for an automobile including a rearward section and at least one forward section; to move the roof from its raised to its stowed position, the forward roof section is folded in accordion fashion against the rearward roof section while simultaneously rotating the rearward roof section backwardly about a generally horizontal axis, whereafter the forward and rearward roof sections are dropped as a unit substantially directly downwardly into the area immediately behind the seat of the automobile.

3,375,038
TABLET ARM ADAPTOR FOR CHAIRS
Allison F. Krueger, 226 Miramar Drive, Green Bay, Wis. 54301; Helen Van Nortwick Krueger, George E. Bills, F. N. Trowbridge, Sr., Philip J. Hendrickson, and John M. Rose, executors of said A. F. Krueger, deceased
Filed Sept. 16, 1966, Ser. No. 579,881
8 Claims. (Cl. 297—160)

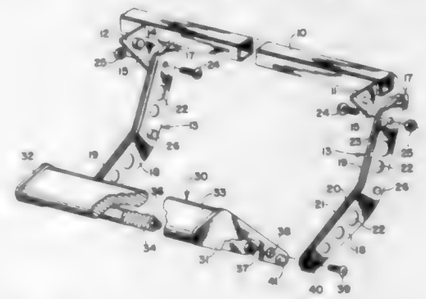
An adaptor for applying tablet arms to conventional single and multiple occupancy chairs, the adaptor comprising parallel bars having upstanding posts for supporting a tablet arm. The parallel bars extend along and

embrace the frame members of the chair and have apertured fingers which are interposed between the chair frame



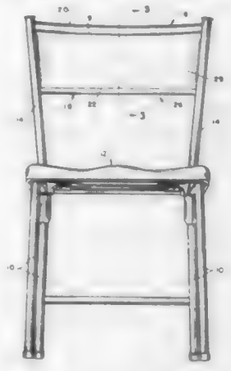
and the seat. The same bolts that secure the seat to the frame extend through the fingers on the adaptor bars.

3,375,039
ADJUSTABLE FOOTREST
George F. Gielow and Robert L. Edwards, Mansfield, Ohio, assignors to Artnell Company, Chicago, Ill., a corporation of Delaware
Filed Aug. 19, 1966, Ser. No. 573,586
9 Claims. (Cl. 297—425)



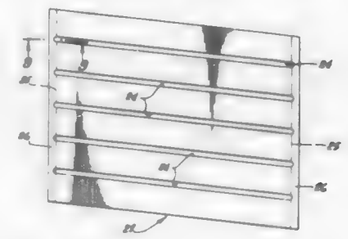
An adjustable footrest particularly useful in vehicle seating including a pair of hangers extending downwardly and toward the user from the seat ahead, a support pad assembly pivoted between the distal ends of the hangers between stops, the assembly including a pair of spaced foot support pads which are mounted on the assembly to provide alternate vertically spaced feet suporting surfaces at the opposite limits of movement of the pad assembly relative to the hangers.

3,375,040
CHAIR BACKREST
Earl F. Hamilton, Boca Raton, Fla., and Edwin K. Moore and Ralph B. Lay, Columbus, Ind., assignors to Hamilton Cosco, Inc., Columbus, Ind., a corporation of Indiana
Filed July 26, 1966, Ser. No. 567,923
5 Claims. (Cl. 297—460)



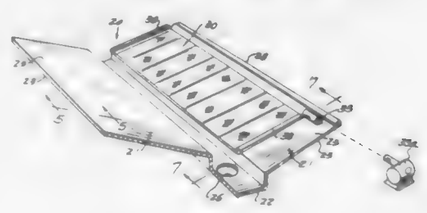
A chair backrest in which there is a pair of laterally spaced uprights interconnected by a pair of transverse, opposed channel members. The members are bowed rearwardly and a padded panel is retained between said members in a stressed rearwardly bowed condition with its upper and lower edges received in said members.

3,375,041
METHOD OF MAKING A BROOM ASSEMBLY
Simon Tamny, Los Angeles, Calif., assignor to Wayne Manufacturing Company, Pomona, Calif., a corporation of California
Original application Apr. 11, 1966, Ser. No. 541,552, now Patent No. 3,340,558, dated Sept. 12, 1967. Divided and this application July 3, 1967, Ser. No. 652,995
7 Claims. (Cl. 300—21)



The invention provides for the simple and low cost manufacture of disposable power-driven cylindrical sweeper brooms which mount brush strips extending in spaced relation longitudinally of the broom, the method employed involving formation of brush strip receiving slots within sheet metal in distended form, rolling the slotted sheet to cylindrical configuration and deforming the ends of the sheet to form outwardly extending flanges between which the brush strips are retained.

3,375,042
CARGO SUPPORTING FLOOR FOR BULK CARGO CONTAINERS
Werner Ostberg, Milan, and Michael D. Challis, Ann Arbor, Mich., assignors to Dundee Cement Company, Dundee, Mich.
Filed Oct. 17, 1966, Ser. No. 587,158
1 Claim. (Cl. 302—29)

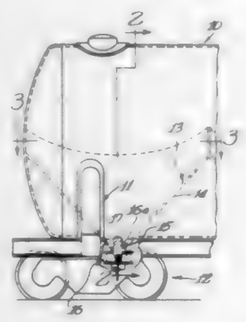


In a system for pumping dry material out of a cargo hold, using a sloping floor and an air pad or envelope, the provision of an air pipe parallel to the upper and higher edge of the pad to billow it for final material delivery.

3,375,043
METHODS OF AND MEANS FOR EFFECTING DISCHARGE OF MATERIALS FROM TANK CARS
William E. Fritz, Hinsdale, Ill., assignor to Union Tank Car Company, Chicago, Ill., a corporation of New Jersey
Filed Jan. 20, 1966, Ser. No. 521,765
6 Claims. (Cl. 302—52)

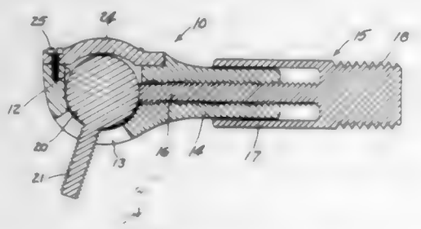
1. Apparatus for effecting the pressurized discharge and cleanout of material from hopper-type railroad tank cars wherein at least a substantial majority of the material is confined within at least one hopper compartment having a discharge port provided in the lowermost ex-

tremity thereof; which apparatus comprises means defining at least one inlet for accommodating the passage of pressurized air to each of said hopper compartments adjacent the discharge port provided therein, means for supplying pressurized air to each of said inlets, and means secured to said inlet defining means for translating pressurized air supplied through each of said inlets into



an upwardly directed high velocity air film, said last mentioned means being a non-porous deflector disc mounted in closely spaced relation to said inlet to ensure a sweeping deflection of said air film upwardly and across substantially the entire internal surface of said hopper compartment whereby undermining and discharge of the material confined therein is effected.

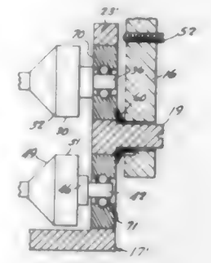
3,375,044
HANDLE ADAPTER FOR TOOLS
Arnold M. Peterson, 655 North 7th West, Provo, Utah 84601
Filed May 4, 1967, Ser. No. 636,093
1 Claim. (Cl. 306—9)



An adapter for connecting tools and tool handles, including a housing, a ball in the housing having a threaded stem projecting through a slot in the housing, a cover plate allowing easy access to the ball and removal of the ball from the housing and a coupling having a shaft threaded into the housing through a boss thereof and a sleeve slidable around the boss.

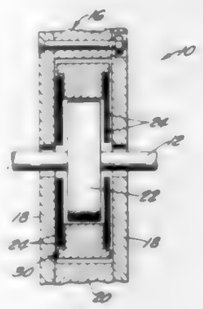
3,375,045
ADJUSTABLE V BEARING FOR GUIDING TRANSLATING SHAFTS
Herman Rudolf Zeidler, Plainview, N.Y. (3812 Dianne St., Bethpage, N.Y. 11714)
Filed Apr. 9, 1965, Ser. No. 446,950
9 Claims. (Cl. 308—6)

9. In a bearing assembly, a stationary support, a flat frame-like yoke member rotatably-mounted in said support on an axis in the plane of the yoke member, a first roller, means rotatably-supporting the ends of the first roller in opposite side portions of the yoke member, a second roller parallel to and spaced from the first roller, means rotatably and slidably supporting the ends of the second roller in said opposite side portions, the rollers being spaced on opposite sides of and being on axes parallel to said first-named axis, each of said rollers having a portion adapted to make rolling contact with an elon-



gated shaft extending through the yoke member between the rollers, and a coiled spring connected to the support and one of said side portions and acting to rotate the yoke member relative to the support.

3,375,046
FOIL THRUST BEARING ARRANGEMENTS
David John Marley, Buena Park, Calif., assignor to The Garrett Corporation, Los Angeles, Calif., a corporation of California
Filed Nov. 1, 1965, Ser. No. 505,808
11 Claims. (Cl. 308—164)

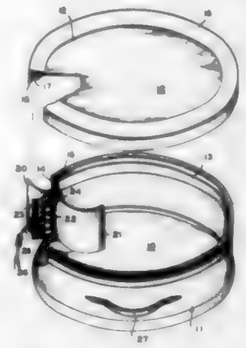


Foil thrust bearing arrangements are provided wherein a plurality of foils are held in fixed position by a thrust plate to provide bearing surfaces with an engaging shaft mounted thrust disk. The foils, which have a leading edge radially mounted on the thrust plate, extend about the shaft and overlap one another in shingle fashion, a convoluted portion in one or more foils increasing bearing resiliency. A bi-directional thrust bearing arrangement includes separate foil groups and associated thrust plates on opposite sides of the thrust disk, and retainer means between the opposite groups of foils minimizing foil contact with the disk.

3,375,047
CONTAINER FOR ROPE LARIAT
Blue H. Townsend, 2400 N. 49th, Waco, Tex. 76710
Filed Feb. 17, 1964, Ser. No. 345,351
9 Claims. (Cl. 312—31)

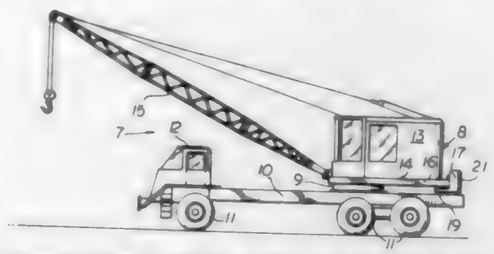
A container for drying lariats or the like including a cylindrical wall having an axis of lesser length than the diameter and defining a chamber for receiving a lariat, a top for tightly closing the container, tongue-and-groove seal means for removably holding the top of the container, and a drying element arranged within the bag and having cylindrical drying surface walls facing the lariat holding chamber. In one embodiment, the cylindrical drying element is an electric heater mounted between polyethylene impregnated layers forming the cylindrical wall of the container with an insulating layer having a heat reflecting

surface arranged to direct heat onto the lariat. In another embodiment, the cylindrical drying element is a cylindrical



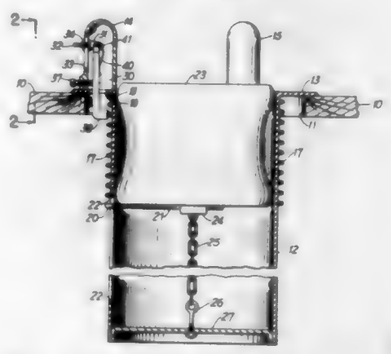
bag containing a desiccant located in the center of the lariat container.

3,375,048
COUNTERWEIGHT MOUNTING MECHANISM
Edwin Korensky and Joseph B. Tiffin, Cedar Rapids, Iowa, assignors to Link-Belt Company, a corporation of Illinois
Filed Nov. 21, 1966, Ser. No. 595,806
10 Claims. (Cl. 212—49)



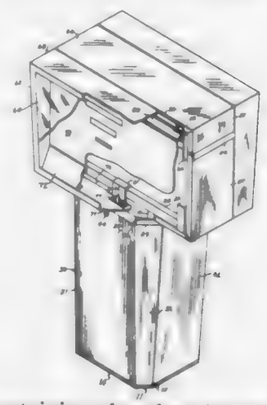
A construction machine having an under carriage with a platform rotatably mounted thereon, a boom pivotally associated with one end portion of the platform and a counterweight removably secured to the other end portion of the platform by means of a counterweight securing mechanism. The counterweight securing mechanism includes a linkage having a portion for operatively engaging and raising the counterweight and a hydraulic cylinder or other suitable power means for driving the linkage.

3,375,049
DISPENSING APPARATUS
Leo Rubinowitz, Westport, Conn., assignor to American Machine & Foundry Company, a corporation of New Jersey
Filed Feb. 25, 1966, Ser. No. 530,117
Claims priority, application Great Britain, Mar. 9, 1965, 9,918/65
4 Claims. (Cl. 312—71)



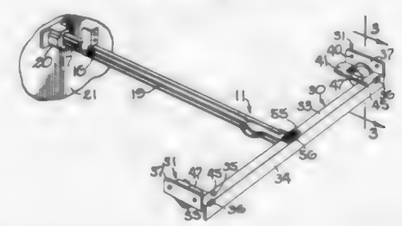
A self-leveling, storing, and dispensing apparatus comprising, in combination, a vertical cylinder having an open top and an opening in the side of said cylinder, an article carrier within said cylinder, and a coil spring disposed about said cylinder, the upper end of said coil spring being fixed in relation to said cylinder and the lower end of said coil spring having a projection extending through said opening in the side of said cylinder supporting said article carrier, and adjustment means to selectively immobilize upper coils of said coil spring, which comprises a clamp member disposed beyond said coil spring, said clamp member having a lower end containing a coil engaging portion, means vertically positioning said clamp member, and means urging the coil engaging portion in the lower end of said clamp member against a coil of said coil spring clamping the coil of said coil spring against said cylinder.

3,375,050
GASOLINE PUMP CASING
Bolling H. Sasnett, Jr., Box 2911, Station D, Atlanta, Ga. 30318
Filed Nov. 30, 1964, Ser. No. 414,743
2 Claims. (Cl. 312—100)



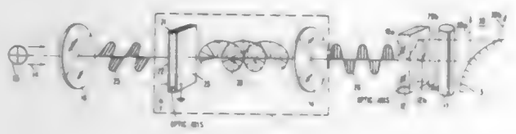
1. Means for retaining the glass holding bezel for the housing of a retail gasoline dispensing means in which the bezel includes an angularly extending bezel edge which includes, a U-shaped supporting piece adapted to receive the edge of a bezel between the side walls thereof and a spring retaining plate between the side walls of the supporting piece to bring pressure to bear against the bezel edge to restrain the edge from displacement from between the side walls of the supporting piece.

3,375,051
DRAWER GUIDING AND SUPPORTING ASSEMBLY
Donald L. Andersen, Fort Atkinson, Wis., assignor to Amerock Corporation, Rockford, Ill., a corporation of Connecticut
Filed Mar. 6, 1967, Ser. No. 621,021
11 Claims. (Cl. 312—343)



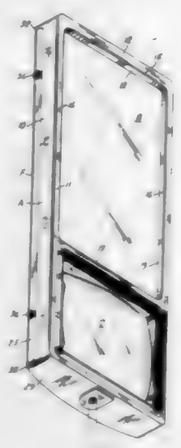
An assembly for guiding and supporting a drawer in a cabinet of the type manufactured without built-in cross rails. The assembly includes its own cross rail which simply may be placed on a pair of mounting brackets fastened to the cabinet side walls, and then locked securely to the brackets at the same time a central guide channel is anchored between the cross rail and the rear wall of the cabinet.

3,375,052
LIGHT BEAM ORIENTING APPARATUS
Kurt M. Kosanke and Werner W. Kulcke, Wappingers Falls, N.Y., assignors to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed June 5, 1963, Ser. No. 285,833
8 Claims. (Cl. 350—150)



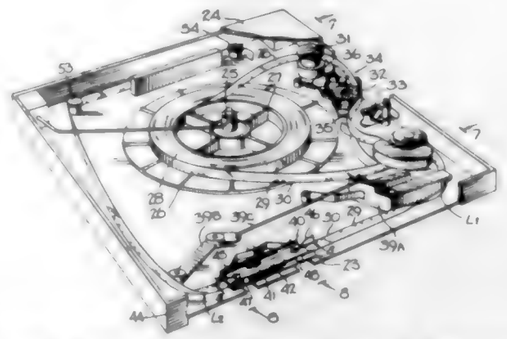
1. In optically aligned combination,
means for accepting a beam of plane polarized light,
means coupled to said accepting means for applying a force thereacross so that said accepting means provides a light beam with a polarization type dependent on the amount of force applied across it,
means for restoring the light beam to a plane polarized beam with an angle of polarization dependent on the polarization type of the light beam output emitted by the accepting means, and
birefringent optical means having its optic axis in alignment with the optic axis of the combination in the path of the output light beam for effecting conical refraction of the restored light beam to provide an output beam with an intensity distribution following a cosine function as determined by the polarization type of the beam emitted by the accepting means.

3,375,053
COMBINATION PLANE AND SPHERICAL REARVIEW TRUCK MIRROR
Wallace W. Ward, Chatham Township, Morris County, N.J., assignor to Diecasters, Inc., Closter, N.J., a corporation of New Jersey
Filed June 29, 1964, Ser. No. 378,525
1 Claim. (Cl. 350—293)



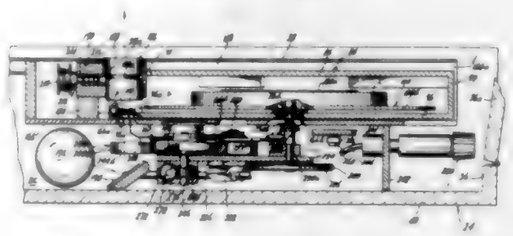
The present disclosure sets forth a truck mirror comprising an upper flat mirror and a lower spherical mirror received in substantially the same casing, with the plane of the upper mirror substantially constituting the tangent front plane of the lower mirror and with the lower mirror being pivotally mounted by means of ball adjustments in the rear of the casing.

3,375,054
CARTRIDGE TYPE SOUND MOTION PICTURE PROJECTOR
David Colson Hughes, White Plains, N.Y., assignor, by mesne assignments, to Bohn Benton Inc., New York, N.Y., a corporation of New York
Filed Dec. 11, 1964, Ser. No. 417,760
30 Claims. (Cl. 352—29)



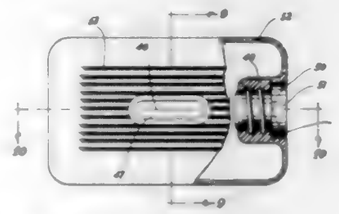
A sound motion picture projector which is cartridge loaded, including a projector mechanism and a foldable rear screen assembly contained within a readily portable carrying case.

3,375,055
CARTRIDGE TYPE SOUND MOTION PICTURE PROJECTOR
David Colson Hughes, White Plains, N.Y., assignor, by mesne assignments, to Bohn Benton Inc., New York, N.Y., a corporation of New York
Continuation-in-part of application Ser. No. 417,760, Dec. 11, 1964. This application Aug. 18, 1965, Ser. No. 480,600
11 Claims. (Cl. 352—72)



A sound motion picture projector which is cartridge loaded, including a projector mechanism and a foldable rear screen assembly contained within a readily portable carrying case.

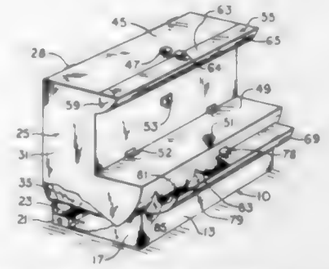
3,375,056
LIQUID SOAP DISPENSER HAVING INTEGRAL SELF-SEALING DISPENSING MEANS
José Rosán, Rancho San Juan, San Juan Capistrano, Calif. 92675
Filed June 17, 1965, Ser. No. 464,698
8 Claims. (Cl. 401—186)



1. A liquid dispenser, comprising:
a hollow body, said body being comprised of a pliable resilient material;
corrugation means formed on the outer surface of at least one wall of said body, said corrugation means having a plurality of intermittent elongated crests and roots;
an elongated protrusion carried by the inner wall of said body, said protrusion having a lateral dimension substantially less than its longitudinal dimension, said elongated protrusion projecting slightly inwardly from the inner wall surface of said body, the face area of said protrusion being substantially less than the area of the inner wall surface of said body, said protrusion face being in a plane substantially parallel to the inner wall of said body;
slit means provided in said body, said slit means comprised of an elongated normally closed aperture extending through said elongated protrusion coextensively with the longitudinal dimension thereof and coextensively aligned with a root of said corrugation means, the outermost edges of said slit means being in tight association and the innermost edges of said slit means being in spaced relation with each other; and
means for filling said hollow body with liquid or the like.

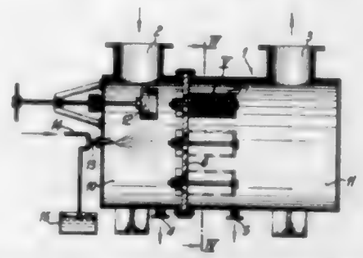
CHEMICAL

3,375,057
STERILIZING DEVICE FOR HAIR STYLING APPARATUS
Ellen M. Morris, 1700 E. 32nd St., Des Moines, Iowa
Filed Mar. 5, 1964, Ser. No. 349,610
8 Claims. (Cl. 21—91)



A sterilizing device for hair styling apparatus consisting of a J-shaped housing mounted on a rectangular housing. The rectangular housing is adapted to receive a disinfectant, the vapors of which pass upwardly into the J-shaped housing to sterilize the apparatus contained therein. The J-shaped housing includes an upper door for inserting the apparatus and a lower door at the front thereof for removing the apparatus after sterilization.

3,375,058
APPARATUS AND METHOD FOR SEPARATING SUSPENDED SUBSTANCES FROM GAS CURRENTS
Gerd Petersen, Wiesbaden-Sonnenberg, and Volker Fattinger and Walter Jäger, Wiesbaden, Germany, assignors to Firma Hugo Petersen, Wiesbaden, Germany, a corporation of Germany
Filed June 25, 1963, Ser. No. 290,364
Claims priority, application Germany, June 28, 1962, P 29,708; Mar. 27, 1963, P 31,454
16 Claims. (Cl. 23—2)



1. Apparatus for separating suspended substances from a gas current under a pressure differential of at least 30 mm. of water column, said apparatus comprising at least one hollow body extending longitudinally of the gas flow path and positioned in the gas current, said body being formed by juxtaposed similar closed annular structural elements which constitute the wall of said body and are arranged with the axial end edges of adjacent elements spaced apart from one another in the longitudinal axial direction of the hollow body to form parallel annular slots between said axial end edges which, in axial section of the hollow body, form sharply curved paths having angularly related annular gas entry and annular gas exit sections and a constriction at the sharpest curvature to impart a single abrupt change in direction to annular gas streams flowing therethrough.

3,375,059
OXIDATION OF WASTE GASES USING PLURAL CATALYSTS IN SERIAL ZONES
Clarence G. Gerhold, Palatine, Ill., assignor to Universal Oil Products Company, Des Plaines, Ill., a corporation of Delaware
No Drawing. Filed July 1, 1964, Ser. No. 379,748
3 Claims. (Cl. 23—2)

Combustion of vehicular exhaust gases by passing the gases in admixture with O_2, either upflow or downflow, through a particle-form catalyst bed containing a major portion of high ignition temperature catalyst particles and a minor portion of low ignition temperature or "ignitor" catalyst particles. The ignitor particles, as a class, are of different size than the bulk or high ignition temperature particles, so that when the bed is subjected to agitation, as by natural road vibration of the vehicle, the ignitor particles tend to stratify as a layer above (for downflow) or below (for upflow) the bulk particles, the purpose being to assure concentration of the ignitor particles in the inlet part of the bed.

3,375,060
METHOD OF PRODUCING HYDROGEN FLUORIDE AND SOLUBILIZED BERYLLIUM
Robert S. Olson, Concord, Elmer C. Tveter and Joseph P. Suris, Walnut Creek, Calif., and Raymond G. Shaw, Lake Jackson, Tex., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware
No Drawing. Filed July 31, 1964, Ser. No. 386,778
13 Claims. (Cl. 23—15)

A process for simultaneously producing hydrogen fluoride and solubilizing beryllium values in a beryllium containing mineral by reacting a beryllium-containing mineral and fluoride in predetermined ratios with sulfuric acid at a temperature of from 200 to about 300° C. and atmospheric pressure.

3,375,061
PYROHYDROLYTIC ATTACK OF RARE EARTH FLUOCARBONATE ORES
Robert M. Healy, Warrenville, Ill., and Lamar T. Royer, Oak Ridge, Tenn., assignors to American Potash & Chemical Corporation, Los Angeles, Calif., a corporation of Delaware
No Drawing. Filed Mar. 12, 1964, Ser. No. 351,511
10 Claims. (Cl. 23—15)

A process for recovering substantially all of the rare earth values from rare earth fluocarbonate ores by subjecting the ore to pyrohydrolytic attack in which heated

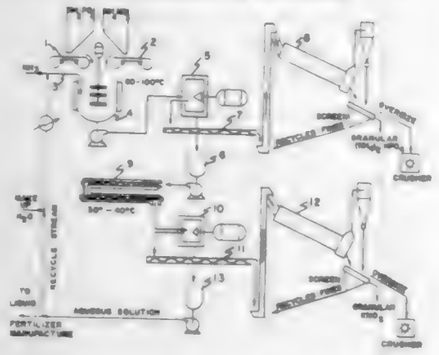
ore is contacted with steam whereby fluorine values in the ore are volatilized and removed therefrom and substantially all of the rare earth values in the ore are converted to acid soluble rare earth oxides which may subsequently be leached from the treated ore. Pyrohydrolytic attack of the ore is generally carried out at temperatures of between 700° C. and 1300° C. Lower temperatures may be used if the ore is digested with a concentrated mineral acid prior to pyrohydrolytic attack.

3,375,062

PROCESS FOR THE PREPARATION OF DIAMMONIUM PHOSPHATE AND POTASSIUM NITRATE FROM POTASSIUM PHOSPHATE AND AMMONIUM NITRATE

William T. Curless, Overland Park, Kans., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Oct. 30, 1964, Ser. No. 407,743
5 Claims. (Cl. 23—102)



By conducting phase reactions by changing concentrations or temperatures in a mixture of solid and aqueous solution phases consisting of aqueous solvent (water plus impurities) and the reciprocal salt pair;

$$K_2HPO_4+2NH_4NO_3 \rightleftharpoons (NH_4)_2HPO_4+2KNO_3$$

there is obtained preferably at elevated temperatures $(NH_4)_2HPO_4$ as a single solid phase and on cooling, the mother liquor yields KNO_3, also as a single solid phase, both products being suitable for use in fertilizer formulations.

3,375,063

AMMONIUM POLYPHOSPHATE PREPARATION

John Bernard Bookey and Barrie Bernett Pearce, Norton-on-Tees, England, assignors to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain

No Drawing. Filed Mar. 23, 1964, Ser. No. 354,101
Claims priority, application Great Britain, Mar. 27, 1963, 12,192/63
8 Claims. (Cl. 23—107)

A process for producing ammonium polyphosphate by reacting wet process phosphoric acid and ammonia gas in the presence of ammonium polyphosphate and at a temperature of 170° to 250° C., whereby cooling is provided by the evaporation of water from the reaction zone, is disclosed.

3,375,064

PRODUCTION OF THE HYDROGEN ION EXCHANGED FORM OF A CRYSTALLINE ZEOLITE

Joseph N. Miale, Trenton, N.J., and Paul B. Weisz, Media, Pa., assignors to Mobil Oil Corporation, a corporation of New York

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,342
21 Claims. (Cl. 23—111)

The invention is directed to producing the hydrogen ion exchanged form of a crystalline aluminosilicate zeolite by contacting an ammonium exchanged crystalline aluminosilicate with an anhydrous, gaseous acid.

3,375,065

METHOD OF CATION EXCHANGING SYNTHETIC FAUJASITE

Carl V. McDaniel, Laurel, and Philip K. Maher, Baltimore, Md., assignors to W. R. Grace & Co., New York, N.Y., a corporation of Delaware

No Drawing. Continuation-in-part of applications Ser. No. 318,249, Oct. 23, 1963, and Ser. No. 367,864, May 15, 1964. This application Jan. 25, 1965, Ser. No. 427,967
1 Claim. (Cl. 23—112)

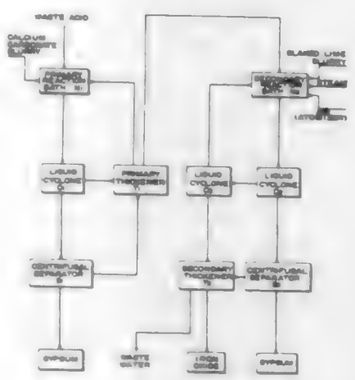
Method of cation exchanging crystalline zeolite aluminosilicates to reduce the sodium content, expressed as the oxide, of the zeolite to less than 1%. The process is characterized by a primary sequence comprising a cation exchange step followed by a heat treatment step followed by another cation exchange step. The sequence is applied either singly or multiply, depending upon the particular materials, temperatures, cation exchange solution concentrations, etc., used. In a further embodiment the second cation exchange solution contains desirable metal cations, such as rare earths.

3,375,066

PROCESS FOR THE CONTINUOUS PRODUCTION OF GYPSUM AND IRON OXIDE FROM WASTE SULFURIC ACID PICKLE LIQUOR AND A CALCIUM COMPOUND

Keiichi Murakami, Sendai, and Mitsuo Hanada and Hidehiko Miyairi, Kitakyushu, Japan, assignors to Yawata Chemical Industry Co., Ltd., Tokyo, Japan, a corporation of Japan

Filed Aug. 19, 1964, Ser. No. 390,675
Claims priority, application Japan, Aug. 24, 1963, 38/44,835 and 38/44,836
9 Claims. (Cl. 23—122)



This invention relates to a method for the continuous production of gypsum from a waste sulfuric acid pickle liquor containing iron comprising introducing into a reaction vessel said liquor, a slurry of a compound such as calcium carbonate or calcium hydroxide and water in such amounts that pH of the mixture is less than 2.5 and the concentration of $CaSO_4 \cdot 2H_2O$ in the mixture is 100 to 300 g./l., stirring the mixture to accelerate the formation of product gypsum of 100 to 200 microns in grain size and separating the reaction mixture into product gypsum and fine gypsum of less than 100 microns.

3,375,067

BENEFICIATION OF PHOSPHATE ORE CONTAINING CARBONATES

Joseph F. Haseman, Lakeland, Fla., assignor, by mesne assignments, to Armour Agricultural Company, a corporation of Delaware

No Drawing. Filed Nov. 4, 1964, Ser. No. 408,748
5 Claims. (Cl. 23—165)

Phosphate ores high in carbonate minerals are calcined to change the carbonate minerals to oxides and cooled.

The ores are then attritioned as by scrubbing, grinding, shaking, etc. to form a dry dust body, and the dust separated as dry dust by screening, air classification, etc. The phosphate ore remaining after separation from the dust is digested with acid for the production of wet process phosphoric acid, superphosphate fertilizer, etc. By removing the dust which contains the bulk of the carbonate materials in dry form, the acid-insoluble fraction is reduced and the acid requirements for phosphoric acid and fertilizer production are reduced.

3,375,068

PHOSPHORIC ACID EXTRACTION

Gerhard J. Frohlich, Ridgewood, N.J., and Thomas W. Segar and Ting Sin Go, Minneapolis, Minn., assignors to St. Paul Ammonia Products, Inc., St. Paul, Minn., a corporation of Minnesota

No Drawing. Filed Mar. 1, 1965, Ser. No. 436,338
8 Claims. (Cl. 23—165)

A liquid-liquid extraction procedure is provided using an organic amide in an inert solvent both to extract trivalent iron from phosphoric acid solutions and, by varying the amide concentration, to extract phosphoric acid itself.

This invention relates to the recovery of phosphoric acid from crude aqueous solutions thereof resulting from the hydrochloric acid acidulation of solid inorganic phosphate material, e.g., phosphate rock, which is composed predominantly of tricalcium phosphate. In particular this invention relates to a new and useful liquid-liquid extraction procedure enabling the economic production of super phosphoric acid, i.e., phosphoric acid containing by weight at least 70% P_2O_5, of high purity, from crude solutions of hydrochloric acid dissolved phosphate rock, which crude solutions may be contaminated with both calcium and iron impurities.

3,375,069

PROCESS FOR REMOVING ZINC OXIDE FROM IRON OXIDE FLUE DUST BY THE USE OF SPENT PICKLE LIQUOR

Leonard A. Duval, 207 Harmon Road, Aurora, Ohio 44202

Filed July 23, 1965, Ser. No. 474,436
2 Claims. (Cl. 23—200)

Undesirable amounts of zinc oxide are removed from iron oxide flue dust so as to render the flue dust valuable as a raw material for the blast furnace. The removal of the zinc oxide is accomplished by means of spent pickle liquor which is usually a waste product in the steel industry resulting from the use of hydrochloric acid or sulphuric acid for cleaning steel resulting in a product which is undesirable for dumping into lakes or streams. The method includes mixing the zinc-containing flue dust with the spent pickle liquor, reacting the mixture to convert a major portion of the zinc oxide to a salt of zinc and of the acid, either zinc chloride or zinc sulphate, then removing the iron oxide from the reacted mixture as a solid cake containing not over 0.50 percent by weight of zinc oxide which is acceptable for recharging in the blast furnace. The effluent from the reacted mixture which contains the zinc salt is evaporated to concentrate the salt and the water discharged from the evaporator is suitable for dumping into a lake or stream. The concentrated zinc salt may be further processed by roasting it to a zinc oxide which drives off HCl or SO_3 gas which may be passed through an absorption tower to recover hydrochloric or sulphuric acid.

3,375,070

PROCESS FOR SEPARATING TITANIUM TETRACHLORIDE FROM SOLUTIONS THEREOF IN CHLORO-SILOXANES

Walter Krings, Rheinfelden, and Werner Dittrich, Herten, Germany, assignors to Dynamit Nobel Aktiengesellschaft, Troisdorf, Bezirk Cologne, Germany, a corporation of Germany

No Drawing. Filed Sept 24, 1963, Ser. No. 311,203
Claims priority, application Germany, Sept. 29, 1962, D 39,943
5 Claims. (Cl. 23—203)

This disclosure pertains to the separating of titanium tetrachloride from solutions thereof containing chlorosiloxanes and silicon tetrachloride. The titanium chloride is separated from the solution by converting the same to titanium oxychloride as a result of the addition to the solution of aqueous hydrochloric acid of at least 30% concentration, the amount of water in the acid comprising 0.38 part by weight thereof to 1 part by weight of titanium tetrachloride in the solution treated.

3,375,071

GERMANIUM SELENIDES AND PROCESSES FOR THEIR PRODUCTION

Howard S. Young, Chadds Ford, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Dec. 23, 1964, Ser. No. 420,776
6 Claims. (Cl. 23—204)

Two new crystal forms of germanium diselenide can be made by heating the elements together at pressures greater than 30 kilobars. A black crystalline form having fibrillar cleavage has semiconductive and photoconductive properties. An orange-yellow tetragonal form also has photoconductive properties.

3,375,072

PREPARATION OF PERCHLORYL FLUORIDE

Anthony W. Yodis, Whippany, and William J. Cunningham, Rockaway, N.J., assignors to Allied Chemical Corporation, New York, N.Y., a corporation of New York

No Drawing. Filed May 21, 1964, Ser. No. 369,301
10 Claims. (Cl. 23—203)

Perchloryl fluoride is prepared by reacting elemental fluorine with an aqueous solution of a water soluble inorganic metal chlorate, particularly an alkali metal chlorate.

3,375,073

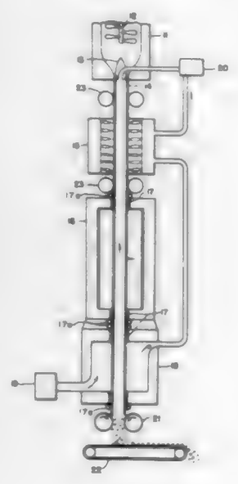
PROCESS AND APPARATUS FOR EFFECTING SOLID-STATE REACTIONS

John C. McMullen, Niagara Falls, N.Y., assignor to The Carborundum Company, Niagara Falls, N.Y., a corporation of Delaware

Filed Nov. 14, 1960, Ser. No. 68,855
12 Claims. (Cl. 23—204)

1. A continuous process for producing a non-oxidic refractory material of the group consisting of carbides and borides which includes the steps of providing an extrudable mixture containing finely divided materials which are thermally reactive to form said refractory materials; continuously extruding said mixture vertically to form a continuous, reinforced, elongated shape; moving said continuous shape vertically while progressively drying it to render it self-supporting; continuing vertical movement of said dried, continuous, self-supporting shape while

progressively heating it without any separate support in a neutral atmosphere to such temperature as to effect reaction of the materials in said shape to form said refractory material without loss of said shape; progressively cooling said continuous shape; and recovering the reaction products therefrom.

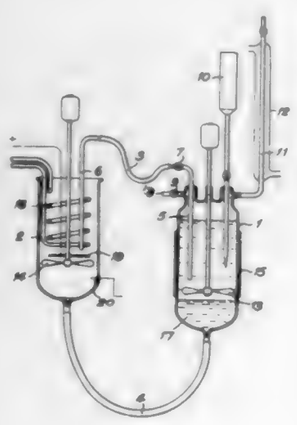


3,375,074

MANUFACTURE OF PHOSPHINE

Malcolm George Palmer, Lakedown, near Kidderminster, England, assignor to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

Filed Jan. 10, 1962, Ser. No. 165,729
Claims priority, application Great Britain, Jan. 19, 1961, 2,209/61
5 Claims. (Cl. 23—204)



1. A process for preparing phosphine comprising reacting white phosphorus, an amalgam of mercury and a metal selected from the group consisting of zinc and cadmium, and a composition consisting essentially of an aqueous solution of an acid at a pH ranging up to pH 5, said reacting taking place at an interface of said aqueous solution of acid, white phosphorus and amalgam which forms a layer beneath said aqueous solution of acid, said aqueous solution of acid further having a specific gravity less than that of said white phosphorus, and in which said reacting includes dropping said white phosphorus, a drop at a time, through said aqueous solution of acid, whereby it drops to the bottom of said aqueous solution of acid and reaches the surface of the amalgam and forms a thin layer thereon.

3,375,075

METHOD AND APPARATUS FOR PRODUCING CARBON BLACK

Theodore A. Ruble, Houston, Tex., assignor to Continental Carbon Company, Houston, Tex., a corporation of Delaware

Filed Nov. 3, 1964, Ser. No. 408,585
6 Claims. (Cl. 23—209.4)

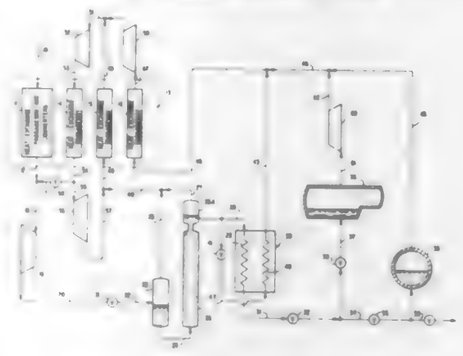
Process for making carbon black by introducing feedstock and an oxygen containing gas into a reactor for ignition of the mixture of the feedstock and gas for the formation of gaseous effluent containing carbon black by partial combustion, passing the effluent through a throttled zone of the reactor at a velocity of at least 1,126 feet per second and thereupon into an expansion zone of the reactor for rapid expansion and partial cooling, whereafter the effluent is passed through a further cooling zone to terminate the carbon black forming reaction and then recovering the effluent from the reactor for separation of the carbon black from the effluent. Apparatus for making carbon black comprising a closed elongate reactor, means for introducing feedstock and oxygen containing gas into the reactor, said reactor having reaction, throttled, expansion, and cooling zones together with means for removing the gaseous effluent containing carbon black from the reactor.

3,375,076

LIQUEFACTION AND CONVERSION PROCESS

Peter C. Vander Arend, Huntsville, Ala., assignor to Air Products and Chemicals, Inc., a corporation of Delaware

Filed Jan. 6, 1964, Ser. No. 335,906
6 Claims. (Cl. 23—210)



Process for producing liquid hydrogen of high para composition in which compressed hydrogen gas of normal equilibrium composition (75% ortho hydrogen-25% para hydrogen) is cooled by heat interchange with relatively cold fluid and passed in contact with a catalyst which accelerates conversion of ortho-hydrogen to para-hydrogen and in which the hydrogen gas is then expanded to a lower pressure to effect at least its partial liquefaction and the liquefied portion is separated and then catalytically converted to further increase its para composition.

3,375,077

STORAGE OF BROMINE

Moshe Rudolf Bloch, Beersheba, and Isaac Schnerb, Jerusalem, Israel, assignors to Mifalei Yam Hamelah, B.M., Beersheba, Israel

No Drawing. Filed July 13, 1964, Ser. No. 382,339
Claims priority, application Israel, July 19, 1963, 19,621
9 Claims. (Cl. 23—216)

1. Method for the storage of bromine wherein the bromine is introduced into a stainless steel container in admixture with a nitrogen oxide.

2. The method according to claim 1, wherein the nitrogen oxide is introduced into the bromine by intimately mixing the bromine with fuming nitric acid.

3,375,078

DETERMINATION OF DEPLETION OF DISSOLVED OXYGEN CONTENT IN WATER

John Stiles Dendy, 315 Woodfield Drive, Auburn, Ala. 36830

No Drawing. Filed Feb. 12, 1964, Ser. No. 344,238
9 Claims. (Cl. 23—230)

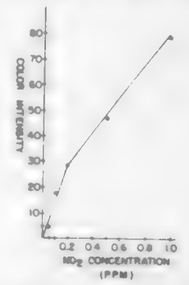
A method and means of determining dissolved oxygen in water by disposing in the water a color indicator comprising a carrier containing tannic acid thereon which will change color due to the reaction of dissolved ferrous iron in the water from which can be determined the amount of oxygen in the water.

3,375,079

COLORIMETRIC REAGENT FOR ANALYSIS OF NITROGEN DIOXIDE IN AIR AND METHOD OF USE

Norman A. Lyshkow, Chicago, Ill., assignor to Precision Scientific Company, Chicago, Ill., a corporation of Illinois

Filed June 8, 1965, Ser. No. 462,226
12 Claims. (Cl. 23—232)



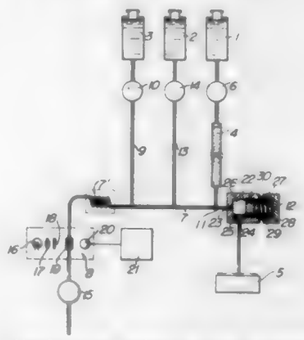
A Greiss-type colorimetric reagent for the analysis of nitrogen dioxide in air, the reagent containing one to four grams sulfanilamide or sulfanilic acid per liter of reagent, 0.025 to 0.75 gram N(1-naphthyl) ethylenediamine dihydrochloride per liter of reagent, 0.025 to 0.075 gram 2-naphthol 3,6 disulfonic acid disodium salt per liter of reagent, and the balance tartaric acid or acetic acid in an amount such that the reagent has a pH of less than four. The disodium salt is described as improving both the rate and intensity of color development, as well as the absorption efficiency of the reagent even at extremely low nitrogen dioxide levels.

3,375,080

APPARATUS FOR CHROMATOGRAPHIC ANALYSIS OF LIQUIDS

Yoshio Fujii, Katsuta-shi, and Kyoichi Ozawa, Kyoto, Japan, assignors to Hitachi, Ltd., Tokyo, Japan, a corporation of Japan

Filed Apr. 7, 1964, Ser. No. 357,926
Claims priority, application Japan, Apr. 10, 1963, 38/17,661
2 Claims. (Cl. 23—253)



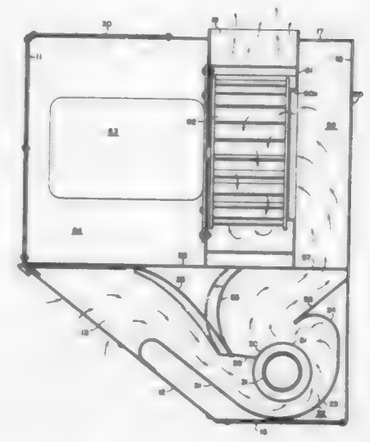
The present disclosure relates to an apparatus for the chromatographic analysis of liquids. More particularly, the present disclosure concerns the chromatographic analysis of liquids wherein means are provided so that the various components of a liquid sample separated in a chromatographic column will no remix before they are passed through a flow-through type photometer. Furthermore, the ratio of the amount of effluent supplied to the photometer to the amount of the effluent collected in a fraction collector, that is the fraction ratio can be freely varied and accurately established.

3,375,081

GREASE INCINERATOR

Alexander M. Papp, Lorain, and Louis P. Hine, Jr., Elyria, Ohio, assignors, by mesne assignments, to American Gas Association, Inc., New York, N.Y., a corporation of New York

Filed June 17, 1965, Ser. No. 464,638
6 Claims. (Cl. 23—277)



1. A grease vapor incinerator comprising, a housing through which grease vapors are to be passed and having an inlet opening and an exhaust opening, baffle and duct means in said housing defining a toroidal chamber between said inlet opening and said outlet opening for imparting a circular motion to grease vapors passing from said inlet opening to said exhaust opening, power fan means in said duct means on the downstream side of said toroidal chamber for positively moving grease vapors from said inlet opening through said toroidal chamber towards said exhaust opening, a member having a cylindrical surface positioned substantially coaxially within said toroidal chamber, means comprising a foraminous burner surface coaxially mounted within said member, means to convey combustible fuel to said foraminous surface, the surface of said member being provided with at least one opening therethrough for the passage of products of combustion from said burner surface contained therein whereby grease particles in the vapor passing through said toroidal chamber are directed by the walls of said chamber toward the heated generally cylindrical surface and impinging on the heated surface of said member are caused to be incinerated.

3,375,082

PROCESS FOR THE CONTINUOUS SEPARATION OF CRYSTALLIZABLE SUBSTANCES

Roderich Graf, Hofheim, Taunus, Germany, assignor to Farbwerke Hoechst Aktiengesellschaft vormals Meister Lucius & Brüning, Frankfurt am Main, Germany, a corporation of Germany

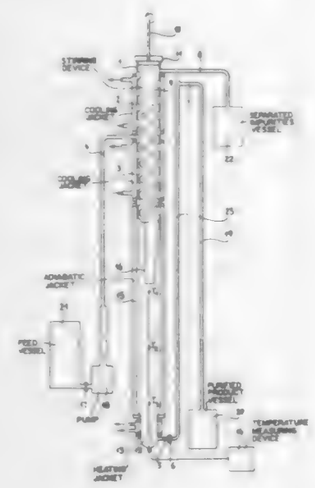
Filed Apr. 28, 1965, Ser. No. 451,559
Claims priority, application Germany, Apr. 29, 1964, F 92,741
5 Claims. (Cl. 23—295)

1. A process for a continuous separation by rectification crystallization of a mixture of crystallizable sub-

stances, containing at least two components crystallizing at a higher and lower temperature with respect to each other, a solid phase of said mixture having a higher specific gravity at its equilibrium melting point than its molten phase, said rectification being carried out in a vertical rectification zone, in which at least three different temperature zones are present, an upper zone being at the lowest temperature, an intermediate, adiabatic zone being at a temperature intermediate the upper zone and a lower zone, which lower zone is at the highest temperature, this temperature corresponding to a temperature at least at which the component crystallizing at a higher temperature melts, said process comprising the steps of:

(a) continuously introducing into the upper zone of the rectification zone, the mixture of substances to be separated, dissolved in at least one solvent, said solvent having a lower specific gravity than a melt of the component which crystallizes out at a higher temperature, said mixture of substances being soluble in said solvent and variably soluble in said solvent depending on temperature;

(b) cooling in the upper zone the introduced mixture while maintaining the upper zone at a temperature at which the liquid phase of the mixture of components has the lowest specific gravity to obtain at least crystals of the component crystallizing at a higher temperature;



(c) forming and maintaining in the intermediate, adiabatic zone a dynamic state of equilibrium between the crystals of the component which crystallizes at a higher temperature and its melt, and wherein said component crystallizing at a higher temperature forms a crystal slurry at an equilibrium melting point;

(d) measuring the temperature at a plurality of points in the intermediate, adiabatic zone;

(e) collecting by means of gravity, at the bottom of the rectification zone in the lower zone, said crystal slurry of the component crystallizing at higher temture;

(f) melting said collected crystal slurry in the lower zone;

(g) modifying the heat input to the lower zone responsive to the temperature measured at the plurality of points in the adiabatic zone;

(h) withdrawing said component crystallizing at a higher temperature from the bottom of the rectification zone in the form of a melt; and

(i) withdrawing a solvent solution containing the component crystallizing at a lower temperature from the top of the rectification zone.

3,375,083
METHOD FOR THE PREPARATION OF COMPLEX FLUORONITRONIUM SALTS

Stephen J. Kuhn, Sarnia, Ontario, Canada, assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Dec. 19, 1963, Ser. No. 331,932
6 Claims. (Cl. 23—356)

A process for preparing complex fluoronitronium salts which comprises introducing nitrylchloride and anhydrous hydrogen fluoride into a solvent for the reactants along with a Lewis acid fluoride, agitating the mixture at a temperature below 20° C. whereby the corresponding nitronium salt product precipitates in the reaction mass and separating this salt product from the residual reaction mixture.

3,375,084
METHOD FOR THE PREPARATION OF COMPLEX FLUORONITROSONIUM SALTS

Stephen J. Kuhn, Sarnia, Ontario, Canada, assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Dec. 19, 1963, Ser. No. 331,959
6 Claims. (Cl. 23—356)

A process for preparing complex nitrosonium salts which comprises introducing nitrosylchloride and anhydrous hydrogen fluoride into a solvent for the reactants along with a Lewis acid fluoride, agitating the mixture at a temperature below 20° C. whereby the corresponding nitrosonium salt product precipitates in the reaction mass and separating this salt product from the residual reaction mixture.

3,375,085
(DIFLUOROAMINO)SULFUR PENTAFLUORIDE

Anestis L. Logothetis, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Aug. 10, 1961, Ser. No. 130,492
1 Claim. (Cl. 23—357)

Claimed is the compound SF_5NF_2 useful as a polymerization initiator.

3,375,086
HYDRAZINATED LITHIUM BOROHYDRIDES AND PREPARATION THEREOF

Frank C. Gunderloy, Jr., Menlo Park, N.J., assignor to Esso Research and Engineering Company, a corporation of Delaware

No Drawing. Filed Oct. 30, 1959, Ser. No. 851,188
7 Claims. (Cl. 23—358)

1. Bis-hydrazinemonoborane lithium borohydride having the formula $LiH_{13}N_4B_3$.

2. A composition of matter consisting of solid bis-hydrazine lithium borohydride having the empirical formula $LiH_{12}N_4B$ and further characterized by having a density of 0.96 gm./cm.^{3} and a melting point of 115° C.

5. Process for making hydrazinated lithium borohydride which comprises reacting a compound selected from the group consisting of hydrazine and hydrazine monoborane with lithium borohydride in the presence of tetrahydrofuran solvent, and recovering the hydrazinated lithium borohydride product.

3,375,087
PROCESS FOR PREPARING HYDRAZINE MONOBORANE

Frank C. Gunderloy, Jr., Menlo Park, N.J., assignor to Esso Research and Engineering Company, a corporation of Delaware

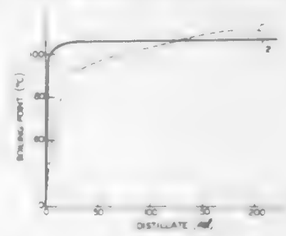
No Drawing. Continuation-in-part of application Ser. No. 820,823, June 15, 1959. This application Nov. 25, 1959, Ser. No. 855,471
4 Claims. (Cl. 23—358)

1. Process for preparing hydrazine monoborane having the empirical formula $H_1N_2H_7$ which comprises reacting a borohydride salt selected from the group consisting of alkali metal, alkaline earth metal, aluminum, and quaternary ammonium borohydride salts with an ionic hydrazine salt containing the monoprotic hydrazinium ion ($N_2H_5^+$) in the presence of an inert liquid diluent with evolution of hydrogen to form the hydrazine monoborane, said borohydride salt and said hydrazine salt being mixed as solids in the diluent, forming in the diluent a solid by-product salt from the cation of the borohydride salt and the anion of the hydrazine salt, separating the hydrazine monoborane product in solution from the unreacted salt and by-product salt solids, and recovering the hydrazine monoborane from solution by separation of solvent in the solution.

3,375,088
TREATMENT OF CRUDE CHLOROSULFURYL ISOCYANATE

Norio Onodera and Motohiko Nishide, Urawa-shi, Saitama-ken, and Hisao Takahashi, Kawagoe-shi, Saitama-ken, Japan, assignors to Nitto Chemical Industry Co., Ltd., Chiyoda-ku, Tokyo, Japan, and Zaidanhojin Nitto Rikagaku Kenkyujo, Urawa-shi, Saitama-ken, Japan

Filed Feb. 25, 1964, Ser. No. 347,233
2 Claims. (Cl. 23—359)

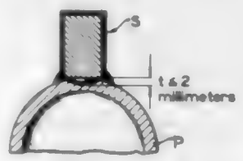


A process for purifying crude chlorosulfuryl isocyanate by contacting it with benzonitrile or a derivative thereof.

3,375,089
STEEL STUDS

Werner Oehler and Werner Müller, Gummersbach, Germany, assignors to L. & C. Steinmuller G.m.b.H., Gummersbach, Germany

Filed June 17, 1965, Ser. No. 464,688
Claims priority, application Germany, June 23, 1964, St 22,295
7 Claims. (Cl. 29—183)



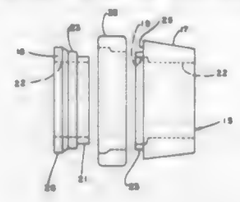
7. In combination with a boiler pipe: a steel stud having a steel core with one end face thereof welded to said boiler pipe and having a cover of steel extending over all of the surfaces of said core with the exception of said one end face, said cover containing at least 1 percent more alloying ingredients than said core and extending up to the outer surface of said pipe.

3,375,090
PROTECTIVE DEVICES FOR TORCH TIPS

Daniel A. Marra, Jr., Wildwood, Pa., assignor, by mesne assignments, to Norman E. White, Butler, Pa.

Filed Sept. 15, 1965, Ser. No. 487,535
5 Claims. (Cl. 29—183.5)

1. In a torch tip for scarfing steel slabs or the like, a protective device comprising an inner base member and an outer base member secured together to form a unit mounted on the outer end of the torch tip, the base unit having a groove cut on its outer diameter and a wearing ring having sides of less width than the width of

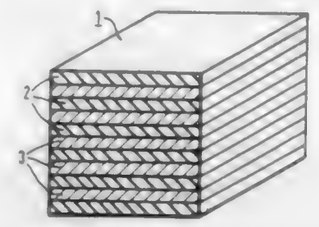


the groove and an inside diameter greater than the outside diameter of the groove for rotatably mounting the wearing on the base unit.

3,375,091
STORER WITH MEMORY ELEMENTS BUILT UP OF THIN MAGNETIC LAYERS

Ernst Feldtkeller, Munich, Germany, assignor to Siemens Aktiengesellschaft, a corporation of Germany

Filed Mar. 17, 1965, Ser. No. 440,646
Claims priority, application Germany, Mar. 17, 1964, S 90,051; May 25, 1964, S 91,223
11 Claims. (Cl. 29—194)



A memory element having several magnetic layers superimposed in stack formation wherein each of the layers are separated from one another by non-magnetic partially electrically conductive interlayers. Thus, there is created a magnetic storer element which is largely free of wall creeping, wherein the upper field strength limit for the reversible rotation and the lower field strength limit for the coherent rotation are located close to each other.

3,375,092
ANTI-ICING GASOLINE

William M. Sweeney, Wappingers Falls, N.Y., assignor to Texaco Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Dec. 3, 1964, Ser. No. 415,816
10 Claims. (Cl. 44—64)

This invention relates to an additive material and to a motor fuel composition containing same having anti-icing properties. The additive material is the reaction product of alkenyl succinic acid or anhydride in which the radical has from 8 to 24 carbon atoms and hydrazine having the formula R_2NNR_2 in which each R represents a member selected from the group consisting of hydrogen and an alkyl radical having from 1 to 4 carbon atoms.

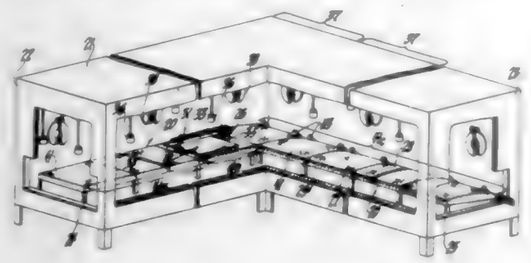
3,375,093
METHOD AND APPARATUS FOR CURVING GLASS SHEETS OR THE LIKE ON A GAS SUPPORT BED

Paul J. Reising, Birmingham, Mich., assignor to Permaglass Inc., Woodville, Ohio, a corporation of Ohio

Filed Jan. 11, 1965, Ser. No. 424,531
11 Claims. (Cl. 65—25)

An apparatus for treating sheets of glass comprising a furnace with a flat bed portion disposed in the furnace and a curved bed portion disposed in the furnace and abutting the flat bed portion along at least a portion of one side thereof. The curved bed portion is curved in a direction generally away from the abutment between the

flat and curved bed portions. The curved bed portion is elongated so that serially arranged spaced sheets of glass may be moved in a first direction over the flat bed portion and then over the curved bed portion while still moving



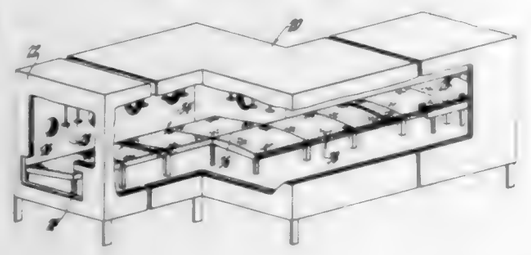
in the first direction and thereafter moved in a second direction over and along the curved bed portion.

3,375,094

METHOD AND APPARATUS FOR SHAPING GLASS OR THE LIKE ON A CURVED GAS SUPPORT BED

Harold A. McMaster, Woodville, Ohio, and Paul J. Reising, Birmingham, Mich., assignors to Permaglass Inc., Woodville, Ohio, a corporation of Ohio

Filed Jan. 11, 1965, Ser. No. 424,632
13 Claims. (Cl. 65—25)



An apparatus for treating sheets of glass including a furnace with a bed having an elongated flat portion and a curved portion disposed within the furnace. There is also included means for providing a blanket of fluid above the bed for floating respective sheets of glass over the bed. There is also included means adjacent the bed for moving the sheets along the bed as they float thereabove. The curved portion of the bed is disposed in abutting relationship to one side of and adjacent one end of the flat portion with the curved portion being curved in a direction laterally away from the longitudinal axis of the flat portion so that a sheet of glass may move along the flat portion as it is being heated and then moved in a different direction over the curved portion while being curved and then moved in a different direction along the curved portion of the bed.

3,375,095

TREATMENT OF MELTING GLASS WITH SO_2

James P. Poole, Brockport, Pa., assignor to Brockway Glass Company, Inc., Brockway, Pa.

Filed Oct. 9, 1964, Ser. No. 402,732
6 Claims. (Cl. 65—134)

In a continuous glass melting furnace wherein raw batch materials are continuously introduced at one end of the melting tank and molten glass is continuously withdrawn from the other, the improvement of substantially continuously discharging gaseous SO_2 in the molten glass body at the batch feeding end of the melting tank and adjacent to the body of the tank whereby the SO_2 rises through the molten glass to the surface and thus forms a sulfate-rich surface layer which dissolves silica scum at the surface of the molten glass body.

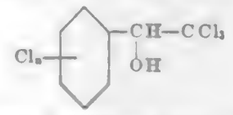
3,375,096

METHOD OF CONTROLLING PLANT GROWTH

Theodore A. Girard, Wayne, N.J., assignor to Tenneco Chemicals, Inc., a corporation of Delaware

No Drawing. Filed June 2, 1964, Ser. No. 372,073
6 Claims. (Cl. 71—122)

1. The method for the control of plant growth which comprises applying to the locus to be treated a phytotoxic amount of a compound having the structure



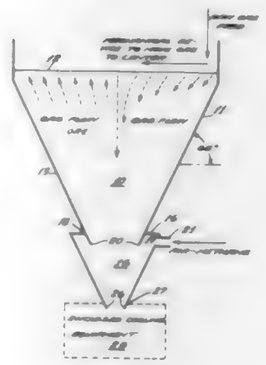
wherein *n* represents a number in the range of 1 to 5.

3,375,097

REDUCING TO MnO THE MnO_2 OF A MANGANESE ORE

Jay Y. Welsh, Catonsville, Md., assignor to Manganese Chemicals Corporation, Baltimore, Md., a corporation of Maryland

Filed Oct. 18, 1965, Ser. No. 496,965
12 Claims. (Cl. 75—1)



The higher oxide of manganese in a manganiferous ore material, in which the manganese values are present in the form of a higher oxide of manganese, is reduced to MnO by a method which comprises feeding an air-natural gas mixture (air ratio accurately controlled) through a hot bed of MnO, and then causing the resulting gaseous products (which have a net reducing effect) to pass immediately into, and upwardly and outwardly through, a bed of the ore the surface of which bed is being fed with raw ore.

3,375,098

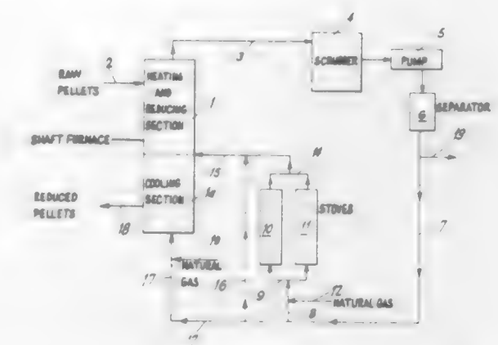
GASEOUS REDUCTION OF IRON ORES

William E. Marshall, Middletown, Ohio, assignor to Armco Steel Corporation, Middletown, Ohio, a corporation of Ohio

Filed July 22, 1964, Ser. No. 384,373
3 Claims. (Cl. 75—35)

1. A process for the gaseous reduction of iron ores to iron by means of a gaseous mixture consisting essentially of carbon monoxide and hydrogen in a reduction zone at high temperature, whereby carbon dioxide and water vapor are produced in said gaseous mixture, comprising the steps of regenerating the said gaseous mixture by withdrawing the top gases from the said reaction zone, cooling the top gases whereby to abstract water from them while allowing carbon dioxide to remain therein, enriching the said top gases solely with a methane-bearing gas, passing the enriched gases through a heating zone at about 2000° to 3000° F. in which a reaction between carbon dioxide and methane is caused to take place with the

production of carbon monoxide and hydrogen, moderating the temperature of the gases to a temperature substantially between about 1300° F. and about 1800° F., and returning the regenerated gases to the reduction zone.



3,375,099

PRODUCTION OF IRON FROM PELLETIZED IRON ORES

William E. Marshall, Middletown, Ohio, assignor to Armco Steel Corporation, Middletown, Ohio, a corporation of Ohio

Filed June 30, 1964, Ser. No. 379,282
2 Claims. (Cl. 75—35)

1. A process for the gaseous reduction of pelletized iron ores to iron which comprises subjecting said ores to gaseous reduction in a shaft furnace at a temperature of substantially 1300° to substantially 1800° F. in a highly reducing gaseous atmosphere consisting principally of carbon monoxide and hydrogen, said atmosphere being generated by the incomplete combustion of a mobile fuel with oxygen and introduced at about the mid-section of the furnace, withdrawing gases at the top of the furnace into a recirculatory system, cooling the said gases in said system so as to abstract moisture from them, reintroducing said gases into said shaft furnace at a point below the mid-section thereof whereby said cooled gases act to cool the reduced ore pellets, and mixing a quantity of a methane-containing gas with said cooled gases before reintroduction thereof into said shaft furnace whereby said methane-containing gas reacts with some of the carbon dioxide in said cooled gases with the production of carbon monoxide and hydrogen.

3,375,100

VACUUM DEGASSSING OF METAL MELTS

Eugen Vopel, Dortmund, and Horst Kutscher, Dortmund-Berhofen, Germany, assignors to Dortmund-Horder Huttenunion Aktiengesellschaft, Dortmund, Germany

No Drawing. Filed July 22, 1965, Ser. No. 474,140
Claims priority, application Germany, Aug. 4, 1964, D 45,110
3 Claims. (Cl. 75—49)

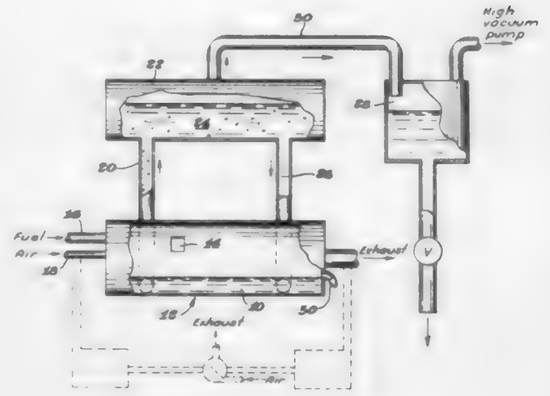
1. A process for the acceleration and improvement of the vacuum degassing of metal melts, characterised in that after the beginning of a vacuum degassing treatment, seeds of finely comminuted metals of the same composition as the metal melt being degassed are introduced into the surface part of the metal melt to initiate the formation of gas bubbles.

3,375,101

PREPARATION OF MAGNESIUM

Thomas W. Mulcihy, Jr., Freeport Tex., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

Filed June 2, 1965, Ser. No. 460,696
4 Claims. (Cl. 75—67)



1. A process for preparing a volatile metal which comprises:

(a) providing at about atmospheric pressure a molten slag material, said slag material produced by the reaction of a reducing agent and a metallothermically reducible volatile metal source material,

(b) adding to said molten slag quantities of said reducing agent and a metallothermically reducible volatile metal source material,

(c) raising the resulting fluid mixture of said slag to an elevated reaction chamber and providing a layer of said fluid mixture in said reaction chamber while maintaining the fluid mass at a temperature at which metallothermic reduction to the volatile metal takes place and wherein the volatile metal is in the vapor state and providing a low absolute pressure in said elevated reaction chamber above the surface of said layer,

(d) removing volatile product metal as vapor from the fluid mass and from the reaction chamber by the low pressure maintained above said layer of fluid mixture,

(e) returning the co-produced molten slag material to said heating apparatus, and

(f) removing said slag in a controlled manner from said heating apparatus without breaking the low pressure in the reaction chamber.

3,375,102

PREVENTION OF MAGNESIUM BURN-OUT IN ALUMINUM-MAGNESIUM ALLOYS

Henry C. Kawecki, Fleetwood, Pa., assignor to Kawecki Chemical Company, New York, N.Y., a corporation of Pennsylvania

No Drawing. Filed Apr. 9, 1965, Ser. No. 447,052
4 Claims. (Cl. 75—68)

2. The method of substantially preventing burn-out of magnesium added to molten aluminum in the production of an aluminum base alloy containing at least 1% by weight of magnesium which comprises incorporating in the molten aluminum an amount of cerium sufficient to introduce between about 0.0001% and 0.1% by weight of cerium into the molten aluminum.

3,375,103
ALLOYED CAST IRON
Albert Collaud, Fribourg, and Jochem Thieme, Balsthal, Switzerland, assignors to Von Roll AG., Gerlafingen, Switzerland, a corporation of Switzerland
No Drawing. Filed Nov. 30, 1964, Ser. No. 414,906
Claims priority, application Switzerland, Dec. 4, 1963, 14,891/63
7 Claims. (Cl. 75—123)

An extremely tough cast iron containing 2.5% to 3.8% carbon; less than 0.08%, and preferably less than 0.04% phosphorus; less than 0.08%, and preferably less than 0.04% chromium; less than 3 ml./100 g. hydrogen; less than 0.3%, and preferably less than 0.15% manganese; less than 0.03% sulfur; the remainder being iron with trace amounts of disturbing elements such as arsenic, boron, antimony, lead, tellurium, selenium, and a silicon content which is lower than that of conventional gray cast iron. This product is extremely tough and has good casting properties.

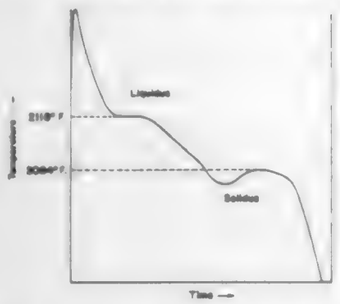
3,375,104
METHOD OF PRODUCING MAGNESIUM FERROSILICON
Melvin L. McClellan, Grand Island, N.Y., assignor to Union Carbide Corporation, a corporation of New York
No Drawing. Filed May 27, 1965, Ser. No. 459,456
1 Claim. (Cl. 75—129)

Method of producing magnesium-containing ferrosilicon without excessive loss of magnesium by adding magnesium to molten ferrosilicon containing more than 53% silicon and then diluting the ferrosilicon with iron to obtain the desired ferrosilicon composition.

3,375,105
METHOD FOR THE PRODUCTION OF FINE GRAINED STEEL
Dunstan W. P. Lynch, Cambridge, Ohio, assignor to Vanadium Corporation of America, New York, N.Y., a corporation of Delaware
No Drawing. Filed Oct. 22, 1965, Ser. No. 502,476
6 Claims. (Cl. 75—129)

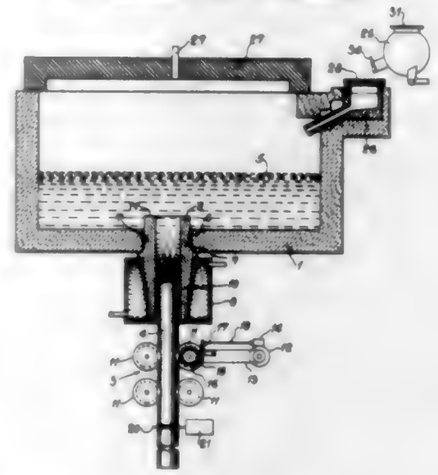
Method of producing fine grained steel by adding to said steel prior to teeming an alloy containing aluminum and silicon and another alloy containing vanadium and silicon.

3,375,106
DETERMINATION OF CARBON EQUIVALENCE OF HYPEREUTECTIC CAST IRON
Dale C. McKissick, Anchorage, and James H. Bauer, Louisville, Ky., assignors to American Standard Inc., a corporation of Delaware
Filed Feb. 2, 1965, Ser. No. 429,869
4 Claims. (Cl. 75—130)



A sample of hypereutectic iron is made hypoeutectic so that the carbon equivalence can be determined by conventional thermal analysis techniques. A relatively pure iron additive is added to the hypereutectic iron sample by melting the sample and the additive and mixing them together. The hypereutectic iron is thus converted to hypoeutectic iron and the molten mixture is permitted to cool and the cooling curve recorded. The carbon equivalence of the mixture is determined by the means of the thermal arrest technique.

3,375,107
COPPER BASE ALLOY AND METHOD FOR ITS MANUFACTURE
Paul J. Kranz, South Plainfield, N.J., assignor to American Smelting and Refining Company, New York, N.Y., a corporation of New Jersey
Filed Oct. 11, 1965, Ser. No. 494,533
10 Claims. (Cl. 75—156.5)



A brass, which when continuously cast, has mechanical properties equal to or superior to those of a high quality leaded tin bronze. The brass contains, by weight, 0.25 to 2.5% P, 1.5 to 4% Sn, 0.25 to 4% Ni, more than 3 to less than 20% Pb, about 4 to less than 20% Zn, and balance copper and contains more zinc than tin.

3,375,108
SHAPED CHARGE LINERS
Le Roy Linwood Wyman, Sr., Bethesda, and John C. Everts, Bowie, Md., and Rolla Estus Pollard, deceased, late of Kensington, Md., by Mabel Pollard, executrix, Kensington, Md., assignors to the United States of America as represented by the Secretary of the Army
Original application Apr. 30, 1964, Ser. No. 364,891. Divided and this application Aug. 10, 1965, Ser. No. 487,952
6 Claims. (Cl. 75—202)

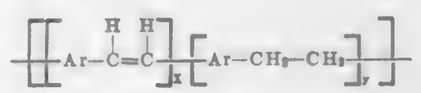
A method for the preparation of a shaped charge liner in which a powdered high refractory material is fed through a floating die to a cavity provided by an inverted conical mold, compressed and sintered to form a porous unitary hollow shaped charge liner and thereafter removed from the mold; the pores of the liner are infiltrated or densified with a ductile metal at a temperature below the sintering temperature but above the melting point of the metal for maximum densification so that on firing the shaped charge the liner will collapse to form a jet of comminuted particles directed at a target, with the refractory material making the hole in the target and the ductile metal impregnating the walls for a smooth hole.

3,375,109
PROCESS FOR PREPARING RHENIUM-REFRACTORY ALLOYS
John E. Peters, Wolcott, Conn., assignors to The Chase Brass & Copper Company, Incorporated, Cleveland, Ohio, a corporation of Connecticut
No Drawing. Filed June 24, 1966, Ser. No. 560,098
7 Claims. (Cl. 75—212)

4. The method of preparing a homogeneous binary alloy of rhenium and a refractory metal selected from the group consisting of tungsten and molybdenum wherein the tungsten-rhenium alloy contains up to about 25% rhenium and the molybdenum-rhenium alloy contains up to about 47% rhenium, which method comprises completely wetting a powder of said refractory metal in elemental condition with an aqueous solution of perrhenic acid, drying the wetted powder and subjecting this to a hydrogen atmosphere at temperatures up to 800° to 1200° C. to reduce the rhenium content to elemental rhenium intimately adhered to and at least in part alloyed with individual particles of said refractory metal powder, compacting the thus treated powder and sintering the resulting compact at temperatures of from about 2000° C. to 2550° C. in a hydrogen atmosphere to produce a homogeneous alloy of said rhenium and refractory metal by solid state diffusion.

3,375,110
PHOTO-MASKING SYSTEM USING p-XYLYLENE POLYMERS
William E. Loeb, Martinsville, N.J., assignor to Union Carbide Corporation, a corporation of New York
No Drawing. Filed Dec. 24, 1964, Ser. No. 421,107
14 Claims. (Cl. 96—36)

8. Method for selectively etching substrate surfaces which comprises:
(a) masking an etchable substrate coated with a substantially unsaturated p-xylylene polymer having the repeating unit:

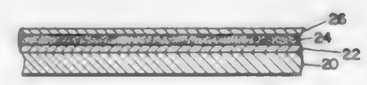


wherein Ar— is a divalent benzenoid nucleus, x is a number from 3 to about 10, inclusive, and y is a number from 0 to about 3, inclusive, to selectively expose predetermined portions of said substrate;
(b) exposing the composite structure to light in the presence of oxygen to render soluble the exposed portions of said p-xylylene polymer on said substrate;
(c) dissolving the soluble portions of said p-xylylene polymer on said substrate; and thereafter,
(d) etching the exposed substrate with a suitable etchant.

3,375,111
PREPARATION OF PRINTING PLATES AND CYLINDERS WITH RESIST-FORMING FILM USED DIRECTLY IN A CAMERA
Marcel Verdooner, Demarest, N.J., William A. Milanese, Jr., Huntington, N.Y., and Hermann Kott, Essex Fells, N.J., assignors to Publication Corporation, New York, N.Y., a corporation of New York
Continuation-in-part of application Ser. No. 365,680, May 7, 1964. This application Feb. 9, 1965, Ser. No. 431,394
8 Claims. (Cl. 96—38)

A process of making printing plates and cylinders in which copy material is exposed on high contrast orthochromatic resist-forming film in a camera by making screen and continuous tone exposures with white light free of ultraviolet light to avoid the loss of tone gradation and to improve dot formation and further exposing the resist material by illuminating the copy material with ultraviolet light to accentuate highlights or drop out portions of the copy treated with fluorescent material and filtering out ultraviolet light entering the camera so that the highlights and drop out areas are exposed on the film entirely by fluorescent light from the copy material.

3,375,112
BINDER-FREE SILVER HALIDE PHOTOGRAPHIC PROCESS
Ignatius E. Theodorou, Watertown, Mass., assignor, by mesne assignments, to Technical Operations, Incorporated, a corporation of Delaware
Filed Oct. 28, 1963, Ser. No. 319,452
4 Claims. (Cl. 96—67)



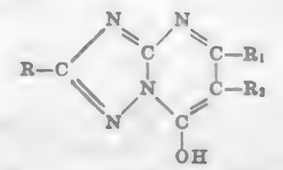
1. A photographic medium comprising a support sheet, a first high molecular weight organic polymer disposed in a subbing layer on a surface of said sheet, a stratum of substantially binder-free microcrystalline photosensitive silver halide disposed on said subbing layer, a second high molecular weight organic polymer disposed on said stratum, said polymers being characterized in that upon exposure, development and chemical fixing of said medium said polymers combine in the area of silver formation to form an insolubilized polymeric matrix in which developed silver is embedded, said polymers being different and each being selected from the group consisting of poly-N-methylethyleneimine, a copolymer of vinylpyrrolidone and vinylacetate, and polyvinylbutyral and polyvinylpyridine.

3,375,113
SENSITIZING PLANOGRAPHIC PLATES FOR PHOTO-LITHOGRAPHY
Towers Doggett, Westbrook, Maine, assignor, by mesne assignments, to Scott Paper Company, Delaware County, Pa., a corporation of Pennsylvania
No Drawing. Filed Sept. 21, 1962, Ser. No. 225,380
4 Claims. (Cl. 96—91)

1. A presensitized printing plate comprising a base material having thereon a coating comprising (1) the double metal salt of the condensation product of a diazotized para-amino-diphenylamine and formaldehyde and (2) phosphoric acid.

3,375,114
HIGH EDGE GRADIENT SILVER HALIDE EMULSION
Yoshihide Hayakawa and Yosuke Nakajima, Minamiashigara-machi, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa-ken, Japan, a corporation of Japan
No Drawing. Filed Mar. 29, 1965, Ser. No. 443,662
Claims priority, application Japan, Dec. 26, 1961, 37/47,418
6 Claims. (Cl. 96—107)

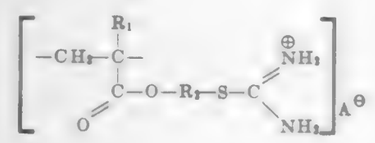
1. A photographic emulsion of silver halide characterized in that in order to increase the edge gradient of image the said emulsion contains (1) at least one compound selected from the group consisting of 4-hydroxy-1,3,3a,7-tetrazaindenes which are represented by the following structural formula:



in which R and R_1 represent a member selected from the group consisting of hydrogen atom and alkyl groups and R_2 represents a member selected from the group consisting of hydrogen atom, alkyl groups, carboxy groups, and carboalkyl groups, and (2) at least one compound selected from the group consisting of lysine, arginine and their salts.

3,375,115
SILVER HALIDE EMULSIONS CONTAINING POLY-ISOTHIURONIUM SALTS AS STABILIZERS
William F. Smith and Bernard D. Illingsworth, Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey
No Drawing. Filed Feb. 10, 1965, Ser. No. 431,701
10 Claims. (Cl. 96—109)

1. A photographic silver halide emulsion having incorporated therein a stabilizing quantity of a polymer in which at least one-third of the repeating units have the following formula:



wherein R_1 is selected from the group consisting of hydrogen and alkyl, R_2 is alkylene, n is a whole number, and A is an anion.

3,375,116
PROCESS OF RECOVERING FEED PRODUCTS FROM ANIMAL WASTES
Wilson Brady Anthony, P.O. Box 447, Auburn, Ala. 36830
Filed Nov. 26, 1963, Ser. No. 326,123
7 Claims. (Cl. 99—2)

A method of recovering nutrients and feed from animal manure comprising forming a mixture of manure and water, dewatering the mixture and using the dewatered matter as feed, and subsequently allowing the wash water to settle. The wash water forms two layers, the bottom layer of which is used as a feed for animals, either liquid, or it can be dried and used as a solid feed.

3,375,117
METHOD OF PRODUCING FROZEN DOUGH
Sebastian Schremmer, 6 Lexenriederweg 8908, Krumbach, Swabia, Germany
No Drawing. Filed Feb. 17, 1965, Ser. No. 433,520
Claims priority, application Germany, Feb. 18, 1964, Sch 34,661
10 Claims. (Cl. 99—90)

A baking dough of prolonged storability is produced of flour and dough-forming constituents by cooling the flour and preferably the constituents to a temperature below about 0° C. so that upon subsequent mixing of the flour and dough-forming constituents a dough will be formed which ab initio has a temperature of between about 0.5° C. and −10° C., and preferably of no more than 0° C. Without permitting intermediate increasing of the temperature of the dough to a significant extent, the thus-formed cold dough is then further cooled, i.e. subjected to deep freezing down to a temperature not higher than about −20° C. The thus-formed dough, due to the fact that at no time the temperature thereof has been higher than +5° C. or preferably 0° C., will be of prolonged storability.

3,375,118
RIPENING CHEESE WITH FILBERT NUT EXTRACT AND *SACCHAROMYCES CEREVISIAE* ENZYMATIC MATERIAL
James P. Cox, Portland, Oreg., assignor to Robert W. Beach, Seattle, Wash.
No Drawing. Filed Jan. 9, 1964, Ser. No. 336,645
13 Claims. (Cl. 99—116)

1. In the method of making cheese, the step of expediting ripening of unripened cheese including subjecting the cheese to the ripening action of material selected from the group consisting of filbert nut extract and *Saccharomyces cerevisiae* enzymatic material.

3,375,119
METHOD OF PRESERVING FRESH MEAT
Said A. Assaf, 7136 S. Bennett, Chicago, Ill. 60649
No Drawing. Filed Oct. 22, 1963, Ser. No. 318,103
1 Claim. (Cl. 99—157)

1. The method of preserving the desirable characteristics of fresh meat which comprises the steps of: dialyzing a slurry of meat and water; concentrating and ashing the diffusate from the dialysis; and contacting at least the surface tissues of meat with the resultant ash and sufficient alkali to raise the pH of said surface tissues to a value of from approximately 6.8 to approximately 13.0.

3,375,120
PRINTING AND COATING COMPOSITIONS
Robert K. Remer, 1500 Central St., Evanston, Ill. 60201
No Drawing. Original application July 17, 1961, Ser. No. 124,329, now Patent No. 3,303,160, dated Feb. 7, 1967. Divided and this application Aug. 4, 1966, Ser. No. 570,177
1 Claim. (Cl. 106—27)

A carbon ink composition in which the major constituents by weight are about equal parts of sugar cane wax and of a mixture of fatty acid amides in which oleamide predominates. The major constituents are: chlorinated paraffin, carbon black, alizarine blue and 2,2'-methylene-bis(4-methyl-6-tertiary-butylphenol). In use the ink is dispersed in volatile chlorinated solvent and applied by a rotogravure cylinder.

3,375,121
ADHESIVE
Vytautas E. Bildusas, Chicago, Ill., assignor to Swift & Company, Chicago, Ill., a corporation of Illinois
No Drawing. Filed Oct. 24, 1962, Ser. No. 232,885
12 Claims. (Cl. 106—146)

1. An adhesive composition comprising casein, an aqueous dispersion of about 1 to about 12.5 parts by weight of a member selected from the group consisting of zinc oxide, aluminum oxide and mixtures thereof, and about 10 to about 37.5 parts by weight of diammonium phosphate per 100 parts of said casein, and including from about 33 to about 400 parts by weight per 100 parts casein adhesive base of an aqueous emulsion of a material selected from the group consisting of natural and synthetic elastomers.

3,375,122
INERT AMMUNITION FILLER COMPOSITION COMPRISING AN ALUM
Milton Roth, Rockaway, N.J., assignor to the United States of America as represented by the Secretary of the Army
No Drawing. Filed Nov. 4, 1966, Ser. No. 592,682
9 Claims. (Cl. 106—204)

Dimensionally stable inert practice ammunition fillers which are compatible with high explosives, comprising, in the main, alums combined with cellulose or dextrin to lower the overall specific gravity of the alumn combination, and with $BaSO_4$ or Fe_2O_3 to raise the overall specific gravity of the alum combination.

3,375,123
PIGMENT PREPARATIONS
Werner Krocker and Roderich König, Riehen, Switzerland, assignors to J. R. Geigy A.G., Basel, Switzerland
No Drawing. Continuation-in-part of application Ser. No. 447,945, Apr. 14, 1965. This application Feb. 11, 1966, Ser. No. 526,717
Claims priority, application Switzerland, Apr. 17, 1964, 5,023/64; Apr. 13, 1965, 5,183/65; Apr. 14, 1965, 5,255/65
14 Claims. (Cl. 106—308)

Pigment preparations are provided which consist essentially of

(a) a pigment powder the particle size of which does not exceed 15 microns, and

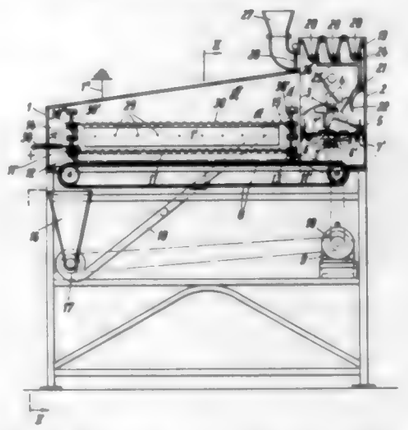
(b) a coating about each of the pigment particles which coating consists of a mixture of

a metal resinate the metal of which is a member selected from the metals of Groups II and III of the Periodic Table of Mendeleyev, and the resinate moiety being that of an acid selected from the group consisting of dihydroabietic acid and a tetrahydroabietic acid, and the partial esterification products of these acids with aliphatic saturated alcohols of from 1 to 6 carbon atoms and from 1 to 6 hydroxyl groups per molecule, said partial esterification products having an acid number of at least 80, and

an ammonium resinate, the resinate moiety of which is that defined under (b) and the ammonium moiety of which is the radical of an organic amine.

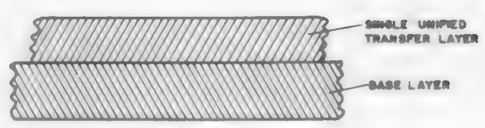
The ammonium resinate/metal resinate mixture is substantially insoluble in water, but is at least colloidally dispersible in the organic solvent constituent of gravure printing ink. The pigment preparations provided are readily dispersible preparations. The pigment preparations are useful in connection with printing inks, lacquers and plastics. There is also provided a process for the production of the new pigment preparations, as well as, industrial products, the printing inks, lacquers and plastics containing the pigment preparations of the invention.

3,375,124
METHOD AND APPARATUS FOR ELECTROSTATICALLY APPLYING FLOCK TO FILAMENT MATERIAL
Walter Linneborn, 5 Monschauer-Platz, Cologne, Germany
Continuation-in-part of application Ser. No. 11,929, Feb. 29, 1960. This application Nov. 7, 1963, Ser. No. 322,092
15 Claims. (Cl. 117—17)



Method and apparatus for applying flock under the influence of electrostatic fields produced by two electrodes positioned in a grounded conductive enclosure. Means for moving adhesive-coated filament material at substantially ground potential in longitudinal direction thereof along a predetermined path through a treatment zone within the enclosure. Negatively charged support means arranged below the predetermined path spaced therefrom in transverse direction and adapted for carrying flock material particles. Aperture-defining first electrode means through which the particles are adapted to pass, and arranged to apply an electrostatic charge to such particles, the first electrode means being located between the support means and the filament material. Means for establishing between the support means and the first electrode means a first electrostatic field having a first gradient in the transverse direction for effecting movement of the flock material particles in such transverse direction. Second electrode means in the encolsure located above the path in substantial parallelism therewith and arranged to apply an electrostatic charge to the flock particles, and means for establishing between the first and second electrode means a second electrostatic field having a second gradient opposite to the first gradient.

3,375,125
METHOD OF MAKING TRANSFER SHEET AND RESULTANT ARTICLE
Popkin Shenian, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Filed Oct. 14, 1963, Ser. No. 316,001
4 Claims. (Cl. 117—36.4)



1. The method of forming a coated sheet article suitable for use in transferring characters to a receiving surface responsive to the application of pressure to the reverse side thereof which comprises the steps of:

(1) Disposing a coating on a polymeric base sheet, said coating being in the form of a dispersion with the particulate material having a maximum average particle size of approximately 10 microns, the coating containing the following ingredients:

(a) a major portion of a sensable component,

(b) a minor portion of a plastic binder and a plasticizer for said plastic binder, said binder and plasticizer combination being capable of forming a coating that has a releasable adherence to the base sheet and is blendable with a wax blend top coating at temperatures above 30° C.

(c) a wetting agent capable of assisting in the dispersion of the sensable material in a solvent, and

(d) an inert organic solvent medium;

(2) maintaining the temperature of said base sheet and coating above 30° C. for a time sufficient to substantially dry said coating on said base sheet;

(3) depositing on said dried sub-coat a top coating, said coating being in the form of a dispersion with the particulate material having a maximum average particle size of approximately 10 microns, the top coating containing a wax blend of a vegetable wax and mineral oil in dispersion form in a lower aliphatic alcohol and a solution of a synthetic resin ester prepared from rosin in a ketonic solvent; and

(4) maintaining the temperature of the two deposited layers at a level above 30° C. to induce the comingling of the ingredients thereof into a single unitary layer.

3,375,126
COMPOSITE FILM STRUCTURE AND PROCESS
Herbert Nagel, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 4, 1964, Ser. No. 408,744
6 Claims. (Cl. 117—46)

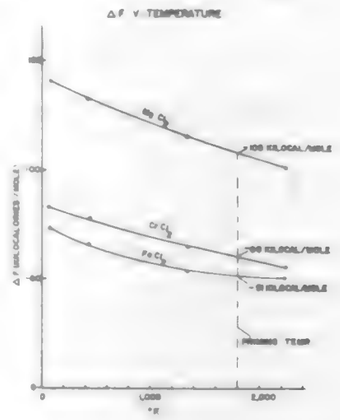
One surface of biaxially oriented polypropylene film is passed through the primary cone of a flame produced by the combustion of a gaseous mixture consisting of gaseous hydrocarbon fuel and oxygen-enriched air, the fuel equivalence ratio of said mixture being between 0.90 and 1.25, and the oxygen ratio being between 0.25 and 0.30, while supporting the film on a surface maintained at a temperature between 45° and 75° C. The resulting treated surface is coated with a vinylidene chloride copolymer coating which is, in turn, flame-treated under the same conditions, and the treated surface of the coating is top coated with an ionic copolymer coating to form a composite film structure.

3,375,127
PLASMA ARC SPRAYING OF HAFNIUM OXIDE AND ZIRCONIUM BORIDE MIXTURES
Clarence Howard Mellor, Saxonville, Mass., assignor to Fenwal Incorporated, Ashland, Mass., a corporation of Massachusetts
No Drawing. Continuation-in-part of application Ser. No. 264,206, Mar. 11, 1963. This application Feb. 19, 1964, Ser. No. 345,837
9 Claims. (Cl. 117—93.1)

1. A method of preparing a high temperature oxidation resistant coating material which comprises: introducing a mixture of hafnium oxide and zirconium boride into a high temperature plasma arc at a temperature above the melting point of the mixture to form an ionized plasma arc jet stream, said mixture consisting of not more than about 50 atomic percent, based on the metal, of hafnium oxide and the amount of hafnium oxide being sufficient to form with the zirconium diboride an oxidation resistant protective coating capable of more than one heating-cooling cycle at 3000° C. for three minutes; and thereafter condensing this stream in a nonoxidizing atmosphere and recovering the condensed material.

3,375,128
CHROMIZING AND PRIMING EMPLOYING CHROMIUM AND ANHYDROUS MAGNESIUM CHLORIDE
Alfonso L. Baldi, Drexel Hill, and William E. Nice, Chadds Ford, Pa., assignors to Alloy Surfaces Company, Wilmington, Del., a corporation of Delaware
Filed Sept. 2, 1965, Ser. No. 484,711
8 Claims. (Cl. 117—107.2)

The present invention relates to priming a porous metal source of chromium for chromizing by anhydrous magnesium chloride, to chromizing accomplished by such



primed porous metal source of chromium and to a chromizing retort for use in such priming and chromizing.

3,375,129
ALUMINUM PLATING EMPLOYING AMINE COMPLEX OF ALUMINUM HYDRIDE
David R. Carley and James H. Dunn, Baton Rouge, La., assignors to Ethyl Corporation, New York, N.Y., a corporation of Virginia
No Drawing. Continuation-in-part of applications Ser. No. 255,662, Feb. 1, 1963, and Ser. No. 243,693, Nov. 16, 1962, which are continuations-in-part of application Ser. No. 25,838, May 2, 1960. This application Sept. 22, 1966, Ser. No. 581,187
17 Claims. (Cl. 117—107.2)

A process for depositing an aluminum coating on a substrate by contacting the substrate at an elevated temperature with thermally decomposable vapors of an amine complex of aluminum hydride. Diffusion of the coating may be effected into the substrate without intervening treatment.

3,375,130
ADHESION OF POLYOLEFINS TO HYDROPHILIC SUBSTANCES
William O. Kincannon, Jr., Wilmington, Del., assignor to Hercules Incorporated, a corporation of Delaware
No Drawing. Filed June 25, 1964, Ser. No. 378,056
5 Claims. (Cl. 117—126)

The bonding of a molten polyolefin to a hydrophilic substrate of the group consisting of cellulose and glass is effected by first forming a thin film of a mixture of polymerized terpene resin and a reaction product of maleic anhydride and a polymerized terpene resin on the surface of said substrate prior to bonding.

3,375,131
FLEXIBLE COATED FILM STRUCTURE AND PROCESS OF MANUFACTURE THEREFOR
Paul Gordon Schmidt, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Mar. 29, 1963, Ser. No. 269,190
5 Claims. (Cl. 117—211)

4. A process comprising: heating a film of a polyimide derived from a dianhydride of an aromatic tetracarboxylic acid and an organic diamine to a temperature within the range of 300 to 600° C. and applying to at least one surface of said film at said temperature and atmospheric pressure a partially reduced partially hydrolyzed metal chloride to produce a metal oxide coating on said film surface which is flexible, electrically conductive and substantially transparent.

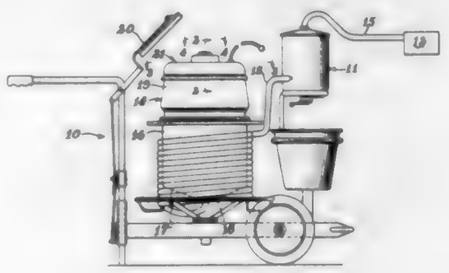
3,375,132
PROCESS FOR IMPREGNATING A CARBON ELECTROLYTIC ANODE AND ARTICLE
Robert H. Geise, Tonawanda, N.Y., assignor to Union Carbide Corporation, a corporation of New York
No Drawing. Filed Mar. 3, 1964, Ser. No. 349,137
12 Claims. (Cl. 117—228)

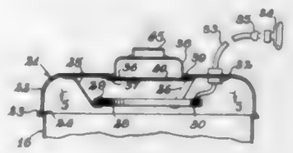
This invention relates to the impregnation of carbon electrodes with a thermosetting impregnant containing a tarry hydrocarbon, furfural and an acid catalyst.

3,375,133
ULTRASONIC METHOD FOR TREATING SINTERED BEARINGS
James J. Scott, Bedminster, N.J., assignor to Bound Brook Bearing Corporation of America, Middlesex, N.J., a corporation of Delaware
No Drawing. Filed Mar. 31, 1964, Ser. No. 356,071
3 Claims. (Cl. 134—1)

Interstitially trapped metallic particles are removed from oil-impregnated sintered metal bearings by immersing the bearings in a petroleum aliphatic solvent of low viscosity to insure the effective coupling of the bearings with a source of ultra-sonic impulses, of low solvency to preserve the impregnating oil, and of high volatility to permit rapid drying at ambient temperature to avoid surface blemishes, the solvent used having a Kauri Butanol value within the range of 25 to 50, and an ASTM distillation range of no more than 40° F., elevating the temperature of the solvent to about 150° F., subjecting the bearings so immersed to the action of ultra-sonic impulses within the range of 30,000 to 35,000 cycles per second for a period of 3 to 5 minutes to remove interstitial free particles of metal powder of which the bearings are formed, and thereafter removing the bearings from the solvent and permitting the same to dry at ambient temperature under an exhaust hood whereby the drying operation is accelerated and the driving off of impregnating oil by elevated temperature is avoided.

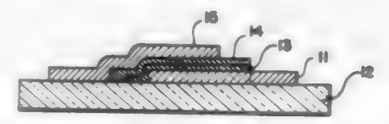
3,375,134
METHOD FOR CLEARING POLYVINYL TUBING
Alfred Paul Hope, South Haven, Mich., assignor to Werner Machinery Company, Grand Rapids, Mich., a corporation of Michigan
Filed Mar. 27, 1963, Ser. No. 268,393
4 Claims. (Cl. 134—21)





1. The method of clearing a hose made of polyvinyl acetate of a milky coating therein resulting from use with milk followed by cleaning solutions containing chlorine, said method comprising heating said coating until said coating disappear.

3,375,135
GALVANIC CELL WITH THIN METAL ELECTRODE AND METHOD OF MAKING SAME
Charles W. Moulton, Columbus, Ohio, and Michael Hacskaylo, Falls Church, and Charles Feldman, Alexandria, Va., assignors to Melpar, Inc., Falls Church, Va., a corporation of Delaware
Filed June 4, 1965, Ser. No. 461,470
16 Claims. (Cl. 136—6)



A thin film galvanic cell and method of fabrication thereof comprising an insulating substrate, a first metal electrode layer deposited on the substrate, a thin film electrolyte layer of a solid salt of said metal deposited on said first metal layer, a second solid electrolyte layer of a salt of a second metal deposited on said first electrolyte layer, and a layer of said second metal forming an electrode deposited on said second electrolyte layer. Each of said layers is deposited on the preceding layer by vacuum deposition techniques at succeedingly reduced temperatures, all of the deposition steps being carried out in the same vacuum without exposure of the substrate to an atmosphere containing an oxidizing agent. The cell may be activated either by applying a reverse charge current to the electrodes or by subjecting the cell to an environment having an elevated temperature to promote galvanic current flow between the electrodes. A portion of the upper electrode is deposited so as to be in contact with the substrate, isolated from the first electrode by the electrolyte layers, whereby a substantially planar load circuit for the cell may be deposited on the substrate in contact with both electrodes.

3,375,136
LAMINATED THIN FILM FLEXIBLE ALKALINE BATTERY
Allan M. Biggar, Arlington, Va., assignor to the United States of America as represented by the Secretary of the Army
Filed May 24, 1965, Ser. No. 458,522
8 Claims. (Cl. 136—6)

1. A thin film flexible battery capable of operating at low temperatures and pressures comprising:
(a) a negative electrode of a thin, flexible, cadmium-plated, copper-coated, felted fabric;
(b) a positive electrode of a thin, flexible, nickel oxide coated, cadmium-plated, copper-coated, felted fabric;
(c) a thin, flexible, porous, insulating spacer separating said negative electrode and said positive electrode;
(d) an aqueous alkaline solution electrolyte wetting the assembly of said negative electrode, said positive electrode and said spacer; and
(e) a vacuum sealed envelope of a thin, flexible, imperivous plastic enclosing said assembly.

3,375,137
ELECTRIC STORAGE BATTERIES OF THE LEAD-SULPHURIC TYPE AND METHOD OF MAKING THE SAME
Frank A. Rossi, York, Pa., assignor to R & C Kem Lab. Co. Inc., Hopewell Junction, N.Y.
Continuation-in-part of application Ser. No. 418,718, Dec. 16, 1964. This application Sept. 3, 1965, Ser. No. 485,042
18 Claims. (Cl. 136—27)

1. A method of making battery plates which comprises tumbling substantially pure lead balls in an entrapped body of air to form a powder while maintaining the temperature below about 135° F., mixing this powder with sulphuric acid to form a paste, applying the paste on a

grid to form a plate and forming and finishing the resulting plate, the quantity of air being such as to produce surface oxidized lead substantially free of lead suboxide and composed principally of lead oxide (PbO) and lead hydrate [$Pb_2O(OH)_2$].

17. A battery plate comprising a grid having thereon a sulfuric acid paste of a powder consisting essentially of lead-oxide in the form of surface oxidized and partly hydrated spiculate, foliate and roseate lead substantially free of lead suboxide and composed principally of lead oxide (PbO) and lead hydrate [$Pb_2O(OH)_2$].

3,375,138

FUEL CELL AND ELECTROLYTE COMPRISING A BOROPHOSPHORIC ACID-PHOSPHORIC ACID GEL

William B. Mather, Jr., Fishkill, N.Y., assignor to Texaco Inc., New York, N.Y., a corporation of Delaware

Filed Sept. 25, 1963, Ser. No. 311,415
7 Claims. (Cl. 136—86)

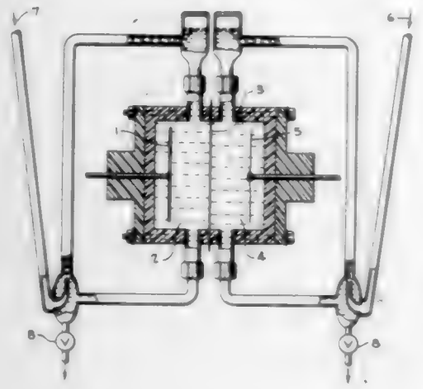
A borophosphoric acid-phosphoric acid gelled electrolyte serves as the electrolyte in a fuel cell operating at 100 to 250° C. The gelled electrolyte is prepared by mixing phosphoric acid with boric acid in a mole ratio of boric acid to phosphoric acid of between 1:7 and 1:2, while maintaining a temperature between 150° and 250° C. for as long as 72 hours. In fuel cells utilizing this electrolyte, such fuels as hydrogen, saturated aliphatic hydrocarbons, carbon monoxide and methanol may be used. Either pure oxygen or air is suitable as the oxidizing gas.

3,375,139

FUEL CELL

Johann G. Tschinkel, South Glastonbury, Ralph E. Schachat, Bloomfield, and Herman B. Urbach, Windsor, Conn., assignors, by mesne assignments, to Leesona Corporation, Cranston, R.I., a corporation of Massachusetts

Filed Nov. 14, 1963, Ser. No. 323,657
4 Claims. (Cl. 136—86)



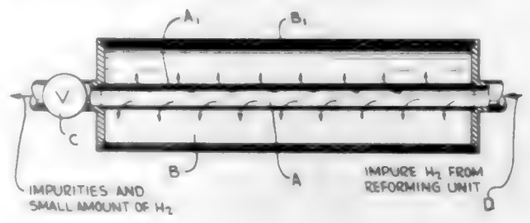
1. A fuel cell for the direct generation of electricity from a fuel and oxidant comprising a fuel electrode, an oxygen electrode, and a substantially invariant electrolyte in contact with each of said electrodes, said electrolyte consisting essentially of an aqueous solution of an alkaline hydroxide having from 0.10 to 8 percent of an oxygen complexing agent selected from the group consisting of nickel dimethyl glyoxime; nickel methyl ethyl glyoxime; nickel hydroxymethyl glyoxime; nickel methyl amyl glyoxime; nickel histidine; cobalt histidine; iron histidine; iron bisindigo; nickel phthalocyanine; iron phthalocyanine; copper nitrosonaphthol; iron dimethyl glyoxime; copper phthalocyanine; nickel oxaldihydroxamic acid; nickel glyoxaldioxime; and nickel methyl bromo glyoxime.

3,375,140

FUEL CELL WITH HYDROGEN PURIFICATION MEANS AND PROCESS OF USING SAME

Harry G. Oswin, Chauncey, N.Y., assignor to Leesona Corporation, Warwick, R.I., a corporation of Massachusetts

Continuation-in-part of application Ser. No. 51,678, Aug. 24, 1960. This application Sept. 8, 1964, Ser. No. 394,829
4 Claims. (Cl. 136—86)



1. A fuel cell for the generation of electrical energy directly from a fuel and oxidant comprising an electrolyte, at least one oxidizing electrode, at least one fuel electrode, said electrodes being in contact with said electrolyte, means for providing fuel to said fuel electrode and means for providing oxidant to said oxidizing electrode, said fuel electrode comprising a porous body in combination with a non-porous hydrogen diffusion membrane, said porous body and said non-porous hydrogen diffusion membrane being spaced apart to form a chamber therebetween and said non-porous hydrogen diffusion membrane being adjacent said means for providing fuel to said electrode, said means for providing fuel being so constructed and arranged that the fuel initially contacts the diffusion membrane when entering the electrode such that only hydrogen diffuses therethrough to the porous body.

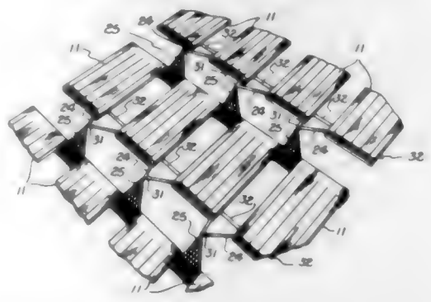
4. The in situ process of supplying a fuel gas to a hydrogen diffusion fuel cell comprising reforming hydrocarbons into gaseous components, flowing said gaseous components through a non-porous hydrogen diffusion tube under pressure whereby the hydrogen gas diffuses through said tube into a porous tube, said porous tube in combination with said non-porous tube forming the fuel gas compartment, and said porous tube being the fuel electrode, the pressure of the gas between said porous tube and non-porous tube being maintained at a lower pressure than in the non-porous tube, said non-porous tube being a member of the group consisting of palladium and palladium-silver alloys containing from 5 to 40 percent by weight silver.

3,375,141

SOLAR CELL ARRAY

Richard F. Julius, Silver Spring, Md., assignor to Aiken Industries, Inc., a corporation of Delaware

Filed July 22, 1963, Ser. No. 296,626
3 Claims. (Cl. 136—89)



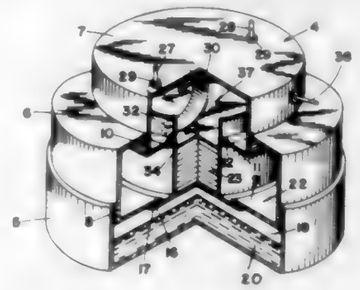
1. A solar cell array comprising
a plurality of solar cells,
each of said cells comprising a laminated structure having a slab of semiconductor material with first and second substantially planar contact surfaces, and
means for interconnecting said solar cells to produce an array in which individual cells are flexibly mounted,
said means comprising an expanded metallic mesh tab connected to said first contact surface and being disposed at an obtuse angle thereto other than parallel,
a wire tab connected to said second contact surface and being disposed at an obtuse angle thereto other than parallel,
said mesh tab and said wire tab being formed from a nickel and copper alloy which is nonmagnetic, and
means joining the mesh tabs to the wire tabs to form a series array.

3,375,142

LOW-VOLTAGE DORMANT POWER-SUPPLY APPARATUS

Virgil K. Concannon, 285 Mount Arlington Blvd., Landing, N.J. 07850

Filed Nov. 26, 1965, Ser. No. 510,460
2 Claims. (Cl. 136—90)



A dormant battery-type power supply unit is provided with a cylindrical casing structure having a cup-shaped bottom section for storing a body of activating electrolyte, an annular intermediate section and a dome-shaped top closure section interconnected and aligned in coaxial relation with each other. A cup-shaped inner cylindrical battery casing or unit holds a plurality of battery cells and is positioned to move longitudinally, from a normal withdrawn position within and coaxial with the intermediate and top sections, into the bottom section and the body of electrolyte to activate the battery. A fluid pressure chamber is provided in the top section and an annular expansion chamber in the intermediate section about the battery unit. Means are provided for applying fluid pressure to the pressure chamber to move the battery unit into the electrolyte which then rises into the expansion chamber and flows through perforations in the sidewall of the unit about the battery cells, thus rapidly activating the battery. The electrolyte body is normally sealed off in the bottom section by the engagement of complementary internal sealing flanges on the intermediate section and the battery unit.

3,375,143

METHOD OF MAKING TUNNEL DIODE

Philip L. Garner, Palm Bay, Fla., and Nicholas Fuschillo, Falls Church, Va., assignors to Melpar, Inc., Falls Church, Va., a corporation of Delaware

Filed Sept. 29, 1964, Ser. No. 399,989
5 Claims. (Cl. 148—1.5)

1. A method for fabricating a tunnel diode junction comprising the steps of sandwiching a metal slab between a degeneratively doped P type monocrystalline semiconductor wafer and a degeneratively doped N-type monocrystalline semiconductor wafer, said wafers and said slab having approximately the same sized adjacent faces, said wafers having the same bulk material, said material having a eutectic temperature with said slab, and heating the interfaces of said wafers and said slab to a value slightly in excess of the eutectic temperature of said slab and said material, said heating being discontinued and cooling

initiated following melting at the interfaces at said value slightly in excess of the eutectic temperature, said metal slab being sufficiently thin relative to the thicknesses of said semiconductor wafers to go entirely into eutectic mixture with only a portion of each of said wafers during said heating step.

3,375,144

PROCESS FOR PRODUCING ORIENTED SILICON STEELS IN WHICH AN ANNEALING SEPARATOR IS USED WHICH CONTAINS A SODIUM OR POTASSIUM, HYDROXIDE OR SULFIDE

David W. Taylor, Middletown, Ohio, assignor to Armco Steel Corporation, Middletown, Ohio, a corporation of Ohio

No Drawing. Filed June 9, 1965, Ser. No. 462,708
10 Claims. (Cl. 148—113)

1. In a process of producing 2.0% to 4.0% oriented silicon-iron sheet stock having good die life, the steps of subjecting the stock to a continuous anneal in an atmosphere oxidizing to carbon and silicon and reducing to iron, applying an annealing separator comprising a glass forming substance and a material chosen from the class consisting of sodium and potassium hydroxides and sulfides to the surfaces of said stock, subjecting said sheet stock to a heat treatment at a sufficient temperature to cause some of said glass-forming substance to fuse with silica on the surface of said sheet stock in the presence of the stated alkali metal compounds whereby to form on the surfaces of said stock a thin and substantially uniform film of a material readily removable from the surfaces of said stock, and removing the said film from the sheet stock surfaces.

3,375,145

METHOD OF MAKING SEMICONDUCTOR DEVICES

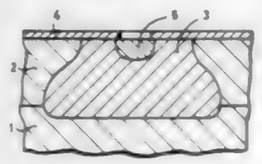
John Bernard Setchfield and Stanley George Allen, London, England, assignors to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware

Filed Aug. 25, 1965, Ser. No. 482,423
11 Claims. (Cl. 148—177)

1. A method of manufacturing a semiconductor junction device which includes the steps of providing a layer of semiconductor material of one conductivity type on part of a face of an effectively insulating base, providing an electrically conducting layer on another part of said face spaced from said semiconductor layer, placing a pellet of impurity material of the opposite conductivity type in the space between said semiconductor layer and said conducting layer with the pellet in contact with each of

said layers, and heating so as to alloy said impurity material with said semiconductor layer to form a junction therein and with said conducting layer to establish ohmic electrical connection between said opposite conductivity type material and said conducting layer.

3,375,146
METHOD FOR PRODUCING A P-N JUNCTION IN A MONOCRYSTALLINE SEMICONDUCTOR MEMBER BY ETCHING AND DIFFUSION
Richard Wiesner, Munich, Germany, assignor to Siemens Aktiengesellschaft, a corporation of Germany
Filed July 16, 1964, Ser. No. 383,040
Claims priority, application Germany, July 23, 1963, S 86,327
2 Claims. (Cl. 148—186)



1. The method for producing a p-n junction in a monocrystalline semiconductor member, which comprises placing upon the surface of a semiconductor of a given conductance type, a dopant material of opposite conductance type, etching the dopant from areas not to be doped, diffusing the remaining dopant into the semiconductor body; precipitating a monocrystalline silicon layer of from 5 to 10 μm thick upon the monocrystalline substrate at a temperature from 1050° to 1150° C. by pyrolytic dissociation of a gaseous semiconductor compound at the surface of the heated substrate; and after termination of the growing process tempering the resulting semiconductor body at 1100° C. for about 75 minutes whereby only one dopant diffused from the substrate into the grown layer produces the desired type of conductance at the layer side facing away from the substrate, whereas the other dopant has virtually not yet reached a large portion of the grown layer.

3,375,147
ENCAPSULATED PROPELLANT AGENT AND METHOD OF ENCAPSULATION
William J. Sparks, Westfield, and Lawrence Spenadel, Fanwood, N.J., assignors to Esso Research and Engineering Company, a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 802,257, Mar. 26, 1959. This application Oct. 9, 1961, Ser. No. 144,285
10 Claims. (Cl. 149—6)

1. A method for encapsulating a liquid oxidizing agent containing nitric acid as a nitrating agent which comprises contacting discrete drops of the liquid oxidizing agent with a hydrocarbon polymer solution so that the nitric acid in said drops reacts with the polymer in solution to form a nitrated hydrocarbon film around the drops, and recovering the thus encapsulated drops of said oxidizing agent.

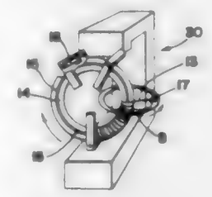
3,375,148
PYROTECHNICS COMPRISING SILVER IODATE, AMMONIUM NITRATE, NITROCELLULOSE AND NITRATE ESTERS
William G. Finnegan and Lohr A. Burkardt, China Lake, Calif., assignors to the United States of America as represented by the Secretary of the Navy
No Drawing. Filed Jan. 17, 1967, Ser. No. 609,968
4 Claims. (Cl. 149—18)

An improved silver iodate containing pyrotechnic which upon combustion on the ground under quiet atmospheric conditions yields active nuclei in a size of about 1×10^{15} particles per gram. These nuclei induce regular and uniform ice crystal formation.

3,375,149
PLUTONIUM ETCHING PROCESS
Morris Kolodney, New York, N.Y., assignor to the United States of America as represented by the United States Atomic Energy Commission
No Drawing. Filed Apr. 28, 1948, Ser. No. 23,865
4 Claims. (Cl. 156—18)

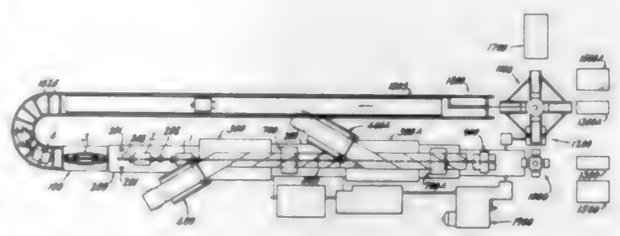
1. The method of etching the surface of a plutonium metal composition which comprises immersing a plutonium metal composition in concentrated orthophosphoric acid for a period of time sufficient to etch the plutonium surface and then withdrawing the plutonium metal composition from said acid.

3,375,150
TIRE MANUFACTURING METHODS
Alexander V. Alexeff, Cleveland, Ohio, assignor to Industrial Ovens, Incorporated, Cleveland, Ohio, a corporation of Ohio
Original application May 27, 1965, Ser. No. 459,305, now Patent No. 3,336,964, dated Aug. 22, 1967. Divided and this application Nov. 21, 1966, Ser. No. 605,118
3 Claims. (Cl. 156—117)



A method of making a reinforcing member for a radial-type pneumatic tire comprising winding a cord in a helical pattern around an annular form and then shaping the form into a U by moving a central circumferential zone of the form radially outwardly.

3,375,151
BEAD-SETTING METHOD USED IN TIRE CARCASS BUILDING PROCESS
Sheppard A. Black, Wayne, and John D. Heide, Ramsey, N.J., assignors to United States Rubber Company, New York, N.Y., a corporation of New Jersey
Original application Dec. 4, 1962, Ser. No. 242,116, now Patent No. 3,281,304, dated Oct. 25, 1966. Divided and this application Mar. 23, 1966, Ser. No. 536,848
4 Claims. (Cl. 156—132)



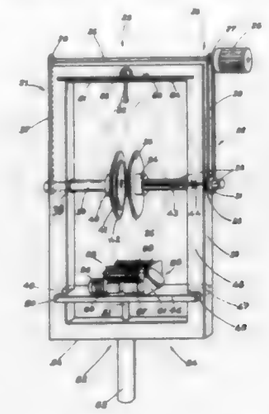
1. In a method of setting a bead on a bead region of a tire carcass ply cylinder wound on a drum no greater in diameter than the internal diameter of said carcass in the region of said bead after said carcass has been completely formed and of thereafter turning up said bead region of said ply cylinder about said bead and adhering said bead region to said ply cylinder, said bead having a greater inside diameter than the outside diameter of said ply cylinder the steps comprising: positioning said ply cylinder and said bead coaxially; first holding said bead in said coaxial relationship while advancing said bead to a position encircling said ply cylinder bead region and spaced therefrom; radially expanding said ply cylinder end region into a set position of contact with said bead; holding said ply cylinder and said bead in said set position by force applied from inside said ply cylinder with said bead concentric with the axis of said ply cylinder while releasing said first hold; and turning up said ply cylinder bead region about said bead and adhering the end of said ply cylinder to said ply cylinder while maintaining said hold from within said ply cylinder; said force being applied to said ply cylinder in such directions that said fabric in said bead region of said carcass ply cylinder, when turned up and adhered to said ply cylinder, forms an angle with the axis of said ply cylinder greater than 0° but less than approximately 70°.

3,375,152
METHOD AND APPARATUS FOR APPLYING CONTINUOUS LENGTHS OF POLYMERIC FILM TO THE SIDES OF A RIGID SUBSTRATE
Ronald E. Lundberg, Grand Island, and Frank J. Wegrzyn, Williamsville, N.Y., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Nov. 4, 1963, Ser. No. 321,066
10 Claims. (Cl. 156—212)

1. A process for applying continuous lengths of polymeric film to the sides of a rigid substrate comprising: continuously advancing successive lengths of a rigid substrate having a polylateral cross-section bounded by at least four substantially planar surfaces; adhesively applying a portion of the width of a continuous length of flexible polymeric film to a first substantially planar surface of each successive length of substrate; adhesively applying the remaining unadhered portion of the width of said film into contact with at least two additional serially contiguous substantially planar surfaces of each successive length of substrate to substantially wrap said substrate with said film and severing said film intermediate said successive lengths of film wrapped substrate.

3,375,153
MACHINE FOR TREATING PNEUMATIC TIRES
Roger Antraigue, 202 Quai de Jemmapes, Paris 10°, Seine, France
Filed Mar. 19, 1964, Ser. No. 353,659
Claims priority, application France, Mar. 21, 1963, 928,798; July 2, 1963, 940,154
11 Claims. (Cl. 156—410)

Machine for reconditioning a worn tire which is held between a pair of parallel disks engaging the beads of the tire and sealing the interior thereof to enable the introduction of a pressure fluid (air) to stiffen the tire for a treatment of its outer surface by cutting and scraping tools.



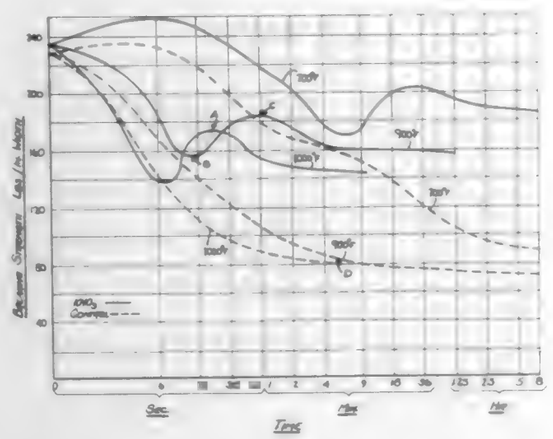
3,375,154
TIRE BUILDING DRUM
William C. Ruttenberg, Stow, and Woodrow Teater, Barberton, Ohio, assignors to The Akron Standard Mold Company, Akron, Ohio, a corporation of Ohio
Filed Apr. 9, 1965, Ser. No. 446,924
15 Claims. (Cl. 156—418)

1. A collapsible tire building drum comprising, a plurality of segment assemblies arranged to form a continuous tire building surface, a shaft spaced within said segment assemblies and adapted for rotating said drum, a cone member mounted on and adapted for axial movement relative to said shaft, a plurality of angularly disposed pin means mounted on and in circumferentially spaced relationship around said cone member, said segment assemblies being slideably mounted on said pin means for radial collapsing and expanding movement of said segment assemblies upon axial movement of said cone member relative said shaft.

3,375,155
TREATMENT OF FIBROUS GLASS
Richard G. Adams, Upper Montclair, N.J., assignor to J. P. Stevens & Co., Inc., New York, N.Y., a corporation of Delaware
Continuation-in-part of application Ser. No. 284,220, May 29, 1963. This application Aug. 15, 1966, Ser. No. 572,249
10 Claims. (Cl. 161—93)

A process for heat-cleaning fibrous glass, such as textiles, in such a manner as to inhibit strength loss by following the steps of treating the glass with an oxygen yielding salt of potassium, sodium, cesium and rubidium, drying the treated glass (if not already dry), and then heating the fibrous glass at a temperature of between about 600° F. and 1250° F. until substantially all of the sizing has been removed, i.e, until the ignition loss is about

0.1% or less. Optionally, further heat treatment is applied to increase tensile strength.



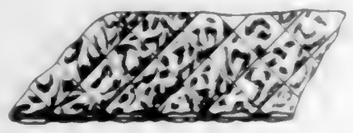
Also, the fibrous glass which has been desized according to the foregoing procedure, said glass being characterized by a tensile strength of at least 70% of that of the untreated greige fabric, and having an excellent white color.

3,375,156

NONWOVEN FABRICS AND METHOD FOR THE PRODUCTION THEREOF

James Macmillan Edgar, Jr., Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Filed May 15, 1963, Ser. No. 280,691
9 Claims. (Cl. 162—132)



1. Method for producing a high bulk laminated fabric comprising the steps of

(a) providing at least one waterleaf (I) comprising synthetic polymer fibers,

(b) providing at least one waterleaf (II) comprising spontaneously elongatable synthetic polymer fibers selected from the group consisting of polyesters, polyamides, polyurethanes, and polyolefins,

each of said waterleaves (I) and (II) being separately prepared by depositing an aqueous slurry onto a papermaking screen, the fibers of waterleaf (II) being spontaneously elongatable by at least 3% in length more than the fibers of waterleaf (I),

(c) forming a fibrous body by arranging said waterleaves (I) and (II) in a superposed relationship, and

(d) fusing said body into a coherent integral fabric of densified and essentially undensified portions by applying mechanical pressure thereto in a predetermined pattern of intersecting lineal regions defining enclosed geometrical shapes large enough to permit said waterleaf (II) containing spontaneously elongatable fibers to expand freely beyond the confines of the said pattern and to buckle away from said waterleaf (I) not containing spontaneously elongatable fibers, while simultaneously heating said body to spontaneously elongate fibers of said waterleaf (II) by at least 3% in length more than the fibers of said waterleaf (I).

3,375,157

CONTROLLING AND ERADICATING AGRICULTURAL NEMATODES WITH HALOGENATED PHENYL PROPYNYL ETHERS

Earl P. Williams, Pen Argyl, Pa., assignor to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Oct. 24, 1963, Ser. No. 318,533
8 Claims. (Cl. 167—30)

A method is provided for controlling and eradicating nematodes from nematode infested soil by applying to or spraying such soil with a nematocidal amount of a halogenated phenyl propynyl ether.

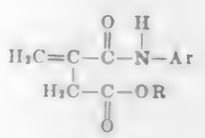
3,375,158

PROCESS FOR CONTROLLING FUNGI WITH ITACONAMIC ESTERS

Ralph P. Neighbors, Olathe, Kans., assignor, by mesne assignments, to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Filed Nov. 13, 1963, Ser. No. 323,255
6 Claims. (Cl. 167—30)

1. A process for the control of fungi comprising applying to the locus of the fungus attack a fungicidally effective amount of an intaconamic ester of the formula



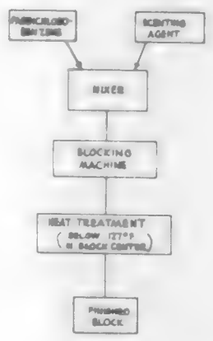
in which Ar is selected from the group consisting of phenyl, 3,4-dichlorophenyl, 3-chlorophenyl, 5-chloro-2-methylphenyl, 3-chloro - 2 - methylphenyl, 3-nitrophenyl, 4 - chlorophenyl, 2 - methylphenyl, 2,5 - dimethylphenyl, 3,5-dichlorophenyl, 3-bromophenyl, 2 - methoxy - 5-nitrophenyl and naphthyl and R is an alkyl group having from 1 to 3 carbon atoms.

3,375,159

PARADICHLOROBENZENE BLOCK

Francis E. Batton, New Martinsville, W. Va., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa., a corporation of Pennsylvania

Filed Sept. 17, 1964, Ser. No. 397,296
5 Claims. (Cl. 167—30)



A method of improving the strength of scented paradichlorobenzene blocks or cakes is described in which the paradichlorobenzene block or cake containing the scenting agent is passed through a heat source and heated to a temperature and for a period of time sufficient to coalesce the particles on the surface of the block or cake without deforming it. Specifically the heat treatment is conducted at such temperatures and for periods of time

sufficient to prevent the block from achieving a temperature of 127° F. in the center thereof. Various methods of heating the block are described. A specific example on electrical heating is shown.

3,375,160

METHODS OF COMBATTING GASTROPODS WITH NITRO SUBSTITUTED SALICYLANILIDES

Jack D. Early, Bethesda, Md., and John P. Chupp, Kirkwood, Mo., assignors to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 462,127, June 7, 1965. This application Mar. 22, 1966, Ser. No. 536,257
7 Claims. (Cl. 167—31)

Gastropodicidal methods employing 2'-chloro-4'-nitrosalicylanilides characterized by having a branched chain alkyl grouping in the 3-position of the salicyl nucleus.

3,375,161

4-CYANO-3,5-DICHLOROISOTHIAZOLE AS A MICROBIOCIDE

Gert P. Volpp, Princeton, N.J., assignor to FMC Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed May 12, 1967, Ser. No. 637,931
2 Claims. (Cl. 167—33)

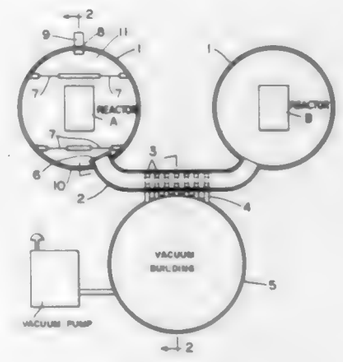
Compositions containing 4-cyano-3,5-dichloroisothiazole are effective in suppressing or eliminating microorganisms which attack oil, emulsion paints and textiles and cause slime formation in paper pulp.

3,375,162

NUCLEAR REACTOR CONTAINMENT SYSTEM AND RELIEF VALVE

Ivan L. Wilson, Islington, Ontario, Canada, assignor to Atomic Energy of Canada Limited, Ottawa, Ontario, Canada, a corporation of Canada

Filed Aug. 9, 1965, Ser. No. 478,070
9 Claims. (Cl. 176—37)



A containment system for a nuclear reactor is described, in which the reactor may be subject to breakdown and release of gaseous radioactive materials into the surroundings. The reactor is enclosed in a gas-tight building and connected through a pressure relief valve to a vacuum building. A sub-atmospheric pressure is maintained in this vacuum building and the relief valve is made to open to connect the reactor and vacuum buildings if at any time the pressure in the reactor building, normally maintained at atmospheric, rises slightly above it. The volume of the reactor and vacuum buildings is so chosen with respect to the pressure maintained in the vacuum building that upon connection of the two buildings the pressure will not be above atmospheric for the worst possible breakdown contemplated.

3,375,163

PARASITICIDE METHODS AND COMPOSITIONS EMPLOYING ORGANOFLUOROSILANES

Wendell K. Whitney, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed May 18, 1964, Ser. No. 368,413
7 Claims. (Cl. 167—39)

1. A method for controlling arthropods and fungi which comprises exposing matter infested with these organisms to the vapors of an organofluorosilane corresponding to the formula

$$(R)_n—Si—F_{(4-n)}$$

wherein each R represents a member of the group consisting of lower alkyl, lower alkenyl and lower alkynyl and n represents one of the integers 1, 2, and 3; the exposure being carried out in an enclosed space and with an amount of organofluorosilane sufficient to provide a concentration of at least 0.10 pound per 1000 cubic feet of enclosed space.

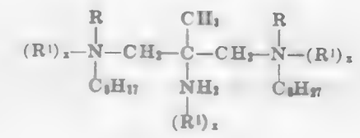
3,375,164

TRIAMINE ACID ADDITION SALTS IN ANTIFUNGAL METHODS AND COMPOSITIONS

Michael G. Mulinos, Westfield, N.J., assignor to Commercial Solvents Corporation

No Drawing. Continuation-in-part of application Ser. No. 56,661, Sept. 19, 1960. This application Nov. 17, 1964, Ser. No. 411,702
17 Claims. (Cl. 167—58)

1. A process for treating superficial fungus infections which comprises applying to the skin as the essential antifungal agent a triamine acid salt having the following general formula:



wherein R represents a member selected from the group consisting of hydrogen and methyl, with the proviso that if one R is methyl then the other R must be hydrogen; R^1 represents a member selected from the group consisting of caprylic, propionic and undecylenic acids, and x is selected from the group consisting of 0 and 1, with the proviso that at least one x is 1, in an effective antifungal amount.

3,375,165

FUSIDIC ACID SALTS OF TETRACYCLINE BASES AND THERAPY

Guy Hagemann, Nogent-sur-Marne, and Lucien Penasse, Paris, France, assignors to Roussel-UCLAF, Paris, France, a corporation of France

No Drawing. Filed Aug. 11, 1964, Ser. No. 388,954
Claims priority, application France, Oct. 22, 1963, 951,378; Jan. 22, 1964, 961,175
6 Claims. (Cl. 167—65)

1. A salt of fusidic acid and the free base form of an antibiotic of the tetracyclic group.

3. A therapeutic composition comprising from 150 mg. to 600 mg. of the fusidic acid salt of tetracycline and a major amount of an inert pharmaceutically acceptable excipient.

3,375,166

METHODS OF PROLONGED INFLAMMATORY TREATMENT

Robert E. Harman, Avenel, Frederick A. Kuehl, Jr., Rumson, Robert G. Strachan, Summit, and Ralph F. Hirschmann, Scotch Plains, N.J., assignors to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Original application July 18, 1963, Ser. No. 296,111, now Patent No. 3,285,935, dated Nov. 15, 1966. Divided and this application Sept. 14, 1965, Ser. No. 510,999

3 Claims. (Cl. 167—65)

1. A method of prolonged localized treatment of inflammation which comprises the topical administration to a mammal of a compound selected from the group consisting of the glucuronide of 1-p-chlorobenzoyl-2-methyl-5-methoxy-3-indolyl acetic acid and the lower alkyl esters of per-lower alkanoylated glucuronide of 1-p-chlorobenzoyl-2-methyl-5-methoxy-3-indolyl acetic acid.

3,375,167

6 - HYDROXYMETHYL - 3 - OXO - 4,6 - DIENIC STEROIDS, ACYL DERIVATIVES THEREOF, AND PROCESS FOR PREPARING SAME

Derek Burn, Michael George Lester, and Vladimir Petrow, London, England, assignors to The British Drug Houses Limited

No Drawing. Filed May 20, 1965, Ser. No. 457,522

Claims priority, application Great Britain, June 3, 1964, 22,960/64; Sept. 1, 1964, 35,827/64

28 Claims. (Cl. 167—74)

5. A compound selected from the group consisting of 6-hydroxymethyl-pregna-4,6-dienic-3,20-diones and 6-hydroxymethylandrosta-4,6-dienic-3-ones and their corresponding 6-acyl derivatives, wherein the said acyl group is a residue of an alkanoic acid having up to 10 carbon atoms.

26. A pharmaceutical preparation comprising a 6-hydroxy- or acyloxymethyl-3-oxo-4,6-dienic steroid according to claim 5 in admixture with one or more solid or liquid pharmaceutically acceptable inert carriers.

3,375,168

WATER-SOLUBLE PHOSPHATE COMPOSITIONS AND PROCESS FOR PREPARING

John Hedley Curtin, North Ryde, New South Wales, and Julian Gagolski, Chatswood, New South Wales, Australia, assignors to The Colonial Sugar Refining Company, Sydney, New South Wales, Australia

Continuation-in-part of application Ser. No. 262,230, Mar. 1, 1963. This application Nov. 27, 1964, Ser. No. 414,074

13 Claims. (Cl. 167—93)

1. A composition of matter consisting of a complex association of two components (a) and (b), said component (a) consisting of at least one salt of a sugar phosphate, and said component (b) consisting of an inorganic phosphate, wherein the cation is selected from the group consisting of Ca^{2+}, Cu^{2+}, Mn^{2+}, Zn^{2+}, Ni^{3+}, Sn^{2+}, Fe^{2+}, Fe^{3+}, Al^{3+}; said association being such that a least 2% by weight of component (b) based on the weight of component (a) is soluble in water under ambient conditions when the total dissolved sugar phosphate and inorganic phosphate exceeds about 5 parts per 100 parts water by weight.

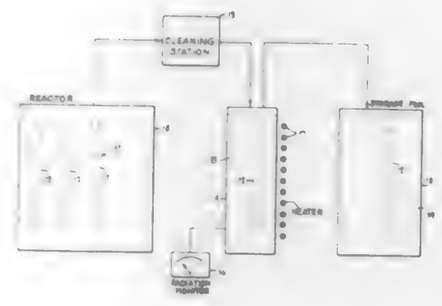
3,375,169

METHOD FOR MINIMIZING CORROSION OF REACTOR ELEMENTS

William E. McHugh, Madison Heights, and Albert A. Shoudy, Jr., Royal Oak, Mich., assignors to Atomic Power Development Associates, Inc., Detroit, Mich., a corporation of New York

Filed Aug. 23, 1966, Ser. No. 574,445

2 Claims. (Cl. 176—30)



A method of minimizing the corrosion of a reactor element by removing the element from a reactor core and placing it in a tank of liquid. Then the element is treated with an electrolysis metal plating additive of nickel or chromium to form a corrosion resistant plating thereon, and then the element is transferred to a storage pool.

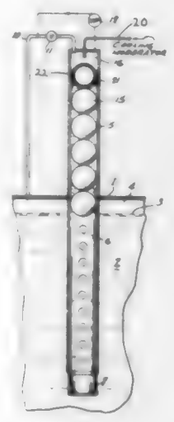
3,375,170

FLOATING ABSORBER SHUTOFF DEVICE FOR NUCLEAR REACTOR

Philip H. Stubley, Clarkson, Ontario, Canada, assignor to Atomic Energy of Canada, Limited, Ottawa, Ontario, Canada, a corporation of Canada

Filed July 8, 1966, Ser. No. 563,791

7 Claims. (Cl. 176—35)



1. In a nuclear reactor, said reactor including a core and a moderator liquid within said core, a channel in said core extending vertically through said core and above the normal level of the surface of the moderator liquid and the interior of said channel being in communication with the moderator liquid, a buoyant neutron absorber material in said channel, a pressure gas supply source, a conduit connecting the upper end of said channel to the source, the pressure of said gas supply source being greater than that on the said surface of said moderator liquid in said core, valve means in said conduit for preventing flow of pressure gas into said channel, and pump means for evacuating gas from said channel and for causing liquid entry into said channel and rising of the surface of the last mentioned liquid above the level of said surface of liquid in said core, said absorber floating in the liquid in said channel, and the level of the surface of the liquid in said channel being chosen whereby said absorber rises above said level of the surface of moderator liquid in said core, said absorber dropping into said core below the said level of the surface of the moderator liquid in said core upon opening of said valve and consequent connection of said channel to said pressure gas source, a dump space below said core for receiving moderator liquid upon its release from said core, means for maintaining gas in said dump space under pressure and means retaining said moderator liquid within said core in the presence of chosen gas pressure within said dump space, and means connecting said conduit to gas in said dump space, said pressure gas supply source comprising said gas in said dump space.

3,375,171

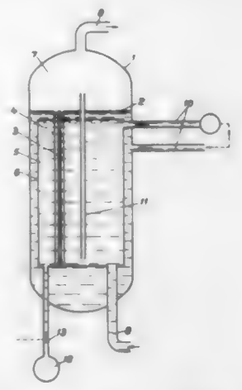
BOILING HEAVY WATER REACTOR

Kare Hannerz, Vasteras, Sweden, assignor to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden

Filed Oct. 12, 1965, Ser. No. 495,129

Claims priority, application Sweden, Oct. 23, 1964, 12,768/64

5 Claims. (Cl. 176—54)



A boiling heavy water reactor having a submerged, pressure regulated, separate moderator tank provided with a plurality of tubes extending from the inside of the moderator tank into a steam space of the reactor above the tank. These tubes can, after a fast shutdown of the reactor, provided that the pressure in the moderator tank is reduced, lead the heavy water steam formed by the residual power into the cooler liquid moderator, where the steam will be condensed.

ERRATUM

For Class 176—37 see:
Patent No. 3,375,162

3,375,172

FUEL ASSEMBLY FOR NUCLEAR REACTORS

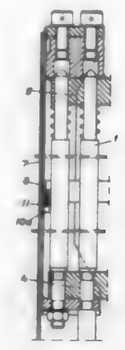
Ragnar Mansson, Vasteras, and Harald Skar, Lidingo, Sweden, assignors to Allmanna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a corporation of Sweden

Filed May 4, 1966, Ser. No. 547,541

Claims priority, application Sweden, May 4, 1965, 5,789/65

9 Claims. (Cl. 176—78)

A nuclear fuel assembly having a number of parallel fuel rods spaced apart by cross-spacers and an axial spacer for determining the axial position of the cross-spacers. The fuel rods are supported by fixing plates, being secured to one and guided in holes in another. The



axial spacer forms a supporting part of the fuel assembly, and all fuel rods are undivided; have no supporting function; and are alike with regard to their mode of connection and support.

3,375,173

FERMENTATION PROCESS FOR THE PRODUCTION OF L-THREONINE

Sukeji Nishimura, Tokyo, Yutaka Sugawara, Higashi-Murayama-shi, Tokyo, and Takeshi Nozaki, Tokyo, Japan, assignors to Chugai Seiyaku Kabushiki Kaisha, Chuo-ku, Tokyo, Japan, a corporation of Japan

No Drawing. Filed June 22, 1965, Ser. No. 466,103

Claims priority, application Japan, July 1, 1964, 39/37,014

8 Claims. (Cl. 195—29)

A process for preparing L-threonine useful in the synthesis of peptides by cultivating a bacteria of the genus Proteus under submerged aerobic conditions in an aqueous nutrient medium. The medium contains homoserine unless isoleucine requiring mutants of Proteus are cultivated in which case the medium must contain isoleucine or α-aminobutyric acid.

3,375,174

MICROBIOLOGICAL HYDROXYLATION OF STEROIDS

Pierre Crabbé and Carlos Casas-Campillo, Mexico City, Mexico, assignors to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Filed Jan. 21, 1965, Ser. No. 427,085

4 Claims. (Cl. 195—51)

Microbiological process of preparing the 15α-hydroxy derivatives of estrone and estradiol and the 6β-hydroxy derivatives of the 3-methyl ethers of estrone and estradiol by subjecting the corresponding desoxy compounds to the enzymes of *Gibberella fujikuroi* (*Fusarium moniliforme*), the thus prepared hydroxy compounds being estrogenic agents useful in fertility control.

3,375,175

PYROLYSIS OF COAL

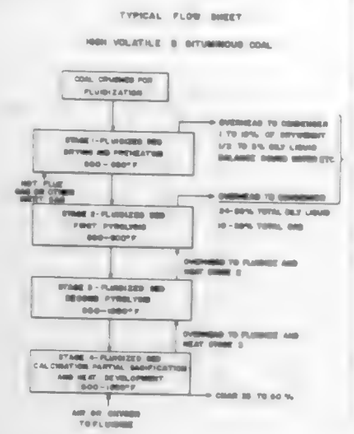
Ralph Tracy Eddinger, Princeton Junction, and John F. Jones, Princeton, N.J., and Leonard Seglin, New York, N.Y., assignors to FMC Corporation, New York, N.Y., a corporation of Delaware

Filed Jan. 21, 1965, Ser. No. 426,812

8 Claims. (Cl. 201—31)

Increased yield of oils and tars are obtained from the pyrolysis of coal by conducting the pyrolysis in at least three fluidized stages, the first being carried out under oxygen free conditions below the fusion temperature of the coal by sufficiently high temperature to remove about

1–10% volatiles from the dry coal, conducting the so treated coal to at least a second stage to remove nearly



TYPICAL FLOW SHEET
HIGH VOLATILE B BITUMINOUS COAL
COAL CRUSHED FOR FLUIDIZATION
STAGE 1 - FLUIDIZED BED DRYING AND PREHEATING 600 - 650°F
OVERHEAD TO CONDENSER 1 TO 10% OF BITUMINOUS 1/2 TO 2% OILY LIQUID BALANCE DOMES WATER ETC.
HOT FLUE GAS OR OTHER HEAT SOURCE
OVERHEAD TO CONDENSER 20-25% TOTAL OILY LIQUID 10 - 20% TOTAL GAS
STAGE 2 - FLUIDIZED BED FIRST PYROLYSIS 800–900°F
OVERHEAD TO FLUIDIZE AND HEAT STAGE 2
STAGE 3 - FLUIDIZED BED SECOND PYROLYSIS 900–1000°F
OVERHEAD TO FLUIDIZE AND HEAT STAGE 3
STAGE 4 - FLUIDIZED BED CALCINATION PARTIAL GASIFICATION AND HEAT RECOVERY 900–1000°F
COKE 30 TO 50 %
AIR OR OXYGEN TO FLUIDIZE

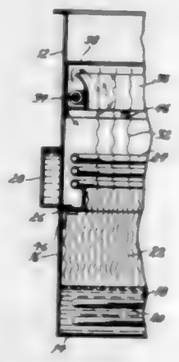
all the volatiles from the coal, and to a final stage to substantially devolatilize the coal, and recovering the condensables from the overheads of the stages.

3,375,176
CHEMILUMINESCENT FORMULATION
Lee E. Humiston, China Lake, Calif., assignor to the United States of America as represented by the Secretary of the Navy
No Drawing. Filed Sept. 23, 1964, Ser. No. 399,429
2 Claims. (Cl. 252—188.3)

1. A chemiluminescent formulation comprising the following

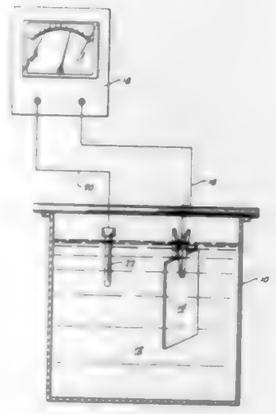
Ingredients:	Percent by weight
Paraffin	15–55
Microcrystalline wax	15–55
Mineral oil	5–25
Methylphenylsilicone	1–20
Tetrakis(dimethylamino)ethylene	20–30

3,375,177
VAPOR DEGREASING WITH SOLVENT DISTILLATION AND CONDENSATION RECOVERY
Burton Rand, Narberth, Pa., assignor to Autosonics, Inc., Conshohocken, Pa., a corporation of Pennsylvania
Continuation of application Ser. No. 368,116, May 18, 1964. This application May 5, 1967, Ser. No. 637,318
5 Claims. (Cl. 203—39)



1. Apparatus comprising:
(a) an open-topped receptacle adapted to be partially filled with a volatile solvent,
(b) means adjacent the bottom of said receptacle for containing the solvent to be vaporized,
(c) first condenser means supported by said receptacle above the solvent for condensing vapors generated from said solvent and thereby defining the upper limit of a vapor zone above the solvent,
(d) a discrete second condenser means supported by said receptacle above said first condenser means and substantially below the upper edge of the receptacle for condensing solvent vapors unaffected by said first condenser means, and
(e) said second condenser means being spaced from walls of the receptacle, means defining a convection flow path for solvent vapors between said wall and outer periphery of said second means, and said second condenser means being substantially colder than said first condenser means,
(f) and a condensate collection trough below said condenser means for collecting condensate and preventing condensed moisture for mixing with the solvent,
(g) said second condenser means including at least one refrigerant-carrying coil, a shield for said second condenser means, said shield being hollow, and said second condenser means being between a portion of said shield and a wall of said receptacle.

3,375,178
METHOD OF CONFIRMING THE OCCURRENCE OF PLATING IN ELECTROLESS NICKEL-PLATING
Carl E. Locke, Ponca City, Okla., assignor to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Filed May 28, 1964, Ser. No. 370,886
2 Claims. (Cl. 204—1)



A method of confirming the occurrence of plating in electroless nickel-plating wherein the bath contains hypophosphite anions comprising adjusting the pH to between about 4.0 and about 6.0 and measuring the potential difference between the material being plated and a reference electrode in electrochemical communication with the plating bath.

3,375,179
METHOD OF ANODIZING BERYLLIUM AND PRODUCT THEREOF
Richard D. Pittman, Burbank, Calif., assignor to Litton Systems, Inc., Beverly Hills, Calif.
Filed Oct. 29, 1964, Ser. No. 407,454
4 Claims. (Cl. 204—32)

1. A method of coating beryllium comprising the steps of immersing a piece of beryllium in an aqueous alkaline bath having a free hydroxyl ions and borate ions, placing a potential between said piece and a second terminal sufficient to generate a current in said bath wherein said piece is anodic, and anodizing said piece to produce a coating thereon.

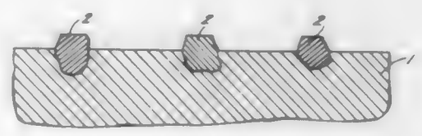
2. The product produced by the process of claim 1.

3. A process of anodizing beryllium comprising the steps of preparing a desired surface on the beryllium metal by a selected cleaning technique, immersing the beryllium metal in an aqueous alkaline bath of an alkali metal borate solution containing free hydroxyl ions, connecting a source of potential between the beryllium metal as anode and a cathode, and passing current through the electrolyte bath by means of the source for a selected time.

3,375,180
ELECTROCHEMICAL PREPARATION OF METAL SULFIDES
Harold J. Heinen, Don H. Baker, Jr., and John M. Gomes, Reno, Nev., assignors to the United States of America as represented by the Secretary of the Interior
No Drawing. Filed Apr. 2, 1965, Ser. No. 445,280
11 Claims. (Cl. 204—61)

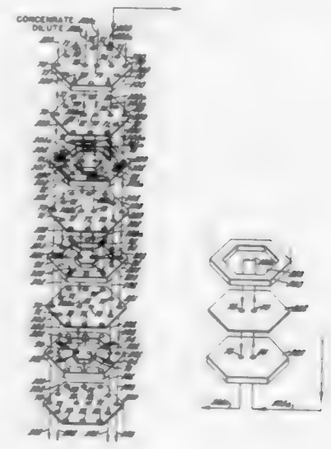
1. A method for production of a high-purity. Group VI–B metal sulfide comprising electrolyzing a molten salt bath containing a feed material from the group consisting of (1) a mixture of the corresponding Group VI–B metal oxide and free sulfur and (2) an impure Group VI–B metal sulfide.

3,375,181
METHOD OF FORMING AN ABRASIVE SURFACE INCLUDING GRINDING AND CHEMICALLY DRESSING
Günther Koech, Hellweg 97, Bielefeld, Germany
Continuation-in-part of application Ser. No. 44,353, July 21, 1960. This application Apr. 21, 1964, Ser. No. 369,048
Claims priority, application Germany, July 2, 1956, K 29,247
9 Claims. (Cl. 204—141)



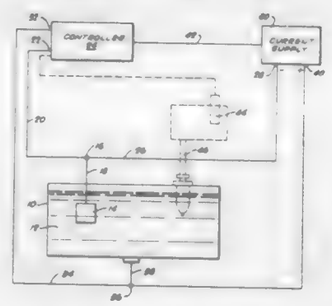
1. A method of producing a coarse, rough operating surface portion on metal bodies such as tools, friction wheels, belt pulleys, clutch discs and the like having at least at said operating surface portion a surface zone of heterogeneous structure including a metallic main component having distributed therethrough and embedded therein a plurality of sharp-edged metal carbide particles, the latter terminating in a common surface plane outwardly spaced from said main component, comprising the steps of grinding said surface portion of a metal body of substantially the desired shape so as to remove therefrom a layer having a thickness equal to only a fraction of the thickness of said harder particles, thereby also removing the outer portions of said harder particles and forming sharp edges on the remainders of the same which remain anchored in said metallic main component of said surface zone and terminate in the surface plane formed by said grinding; and chemically selectively removing the upper layer of only said main component of the thus ground surface zone, so as to form an operating surface portion consisting of said softer main component and of said sharp-edged metal carbide particles projecting outwardly from said softer main component and terminating in said surface plane of said operating surface portion, whereby due to the sharpening of said harder particles by said grinding and due to the subsequent removal of said upper layer of said main component a rough operating surface portion is formed.

3,375,182
ELECTRODIALYSIS METHOD AND APPARATUS HAVING RADIALLY SYMMETRICAL FLOW PATHS
William Kwo-wei Chen, Stamford, Conn., assignor to American Machine & Foundry Company, a corporation of New Jersey
Original application Mar. 30, 1962, Ser. No. 195,352, now Patent No. 3,228,867, dated Jan. 11, 1966. Divided and this application July 19, 1965, Ser. No. 484,499
3 Claims. (Cl. 204—180)



1. A method of fluid demineralization in a multi-compartment electrodialysis device characterized by the steps of flowing a solution in radially symmetrical flow paths defined by a plurality of membrane gaskets spaced alternately between membranes to form concentrating and diluting chambers, said flow paths commencing in a plurality of source inlets located in the outer periphery of said flow paths and moving toward a constricted central flow path wherein there is established a solution velocity gradient in inverse relationship to a solution salinity gradient at constant applied voltage between a pair of electrodes while demineralizing said solution and separating the central constricted flow path into product and concentrate streams.

3,375,183
APPARATUS FOR MINIMIZING CORROSION OF METALS
William P. Banks and Merle Hutchison, Ponca City, Okla., assignors to Continental Oil Company, Ponca City, Okla., a corporation of Delaware
Filed Sept. 23, 1964, Ser. No. 398,597
1 Claim. (Cl. 204—196)

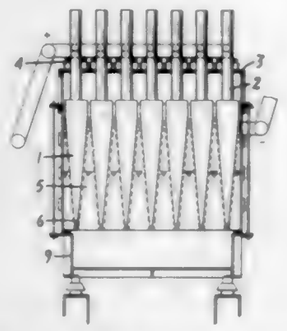


A method for anodically passivating a vessel containing a corrosive electrolyte without the necessity of utilizing a reference electrode except for the period of time in which a polarization curve is obtained. When obtaining the polarization curve, the potential between the cathode and the vessel is monitored to pick out the passive range of the vessel. The cathode is then connected directly to the controller and the controller is set to control the potential within the passive region.

3,375,184
ELECTROLYTIC CELL WITH CONTROLLABLE MULTIPLE ELECTRODES

Umberto Giacopelli, Rosignano Solvay, Livourne, Italy, assignor, by mesne assignments, to Solvay & Cie, Brussels, Belgium, a corporation of Belgium

Filed Oct. 19, 1964, Ser. No. 404,792
Claims priority, application Belgium, Oct. 23, 1963, 512,368
5 Claims. (Cl. 204—225)

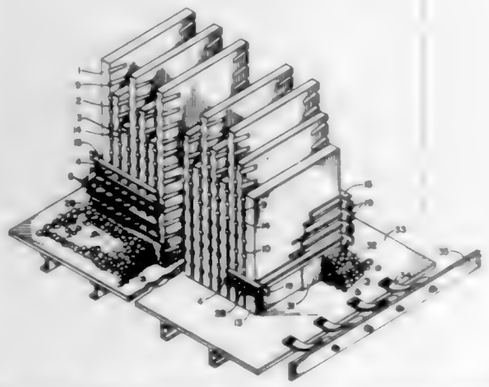


1. Electrolytic cell with diaphragm comprising a succession of alternating anodes and cathodes, characterised in that the electrodes are in the form of alternately reversed wedges, the anodes and cathodes having the same wedge angle, and that every anode fits in the free space left between two adjacent cathodes, the distance between the parallel surfaces of the electrodes being determined by the height of one series of electrodes of the same sign relative to that of the electrodes of opposite sign.

3,375,185
ANODE FOR ALUMINA REDUCTION CELLS

Robert M. Kibby, Florence, Ala., assignor to Reynolds Metals Company, Richmond, Va., a corporation of Delaware

Filed July 17, 1964, Ser. No. 383,370
6 Claims. (Cl. 204—280)

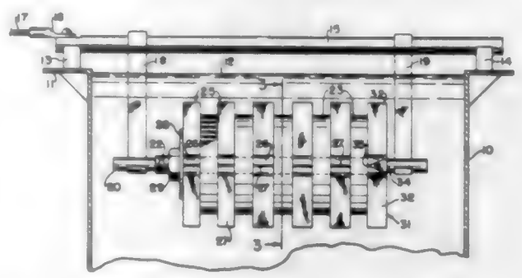


The anode for alumina reduction cells comprises a pack of vertically disposed prebaked carbon slabs including electrical contact members extending into spaces between the slabs. In a preferred embodiment adjacent faces of the slabs are formed with opposed elongate recesses into which the contact pins extend to key adjacent slabs together against relative movement, and in another embodiment the slabs are spaced apart from one another, the contact members being flat bars extending inwardly between slabs. Carbon paste between the slabs surrounds the contact members, holding them in place forming an integral structure. As the paste is consumed somewhat more rapidly than the slabs, channels are created to assist in removing gas, with the lowermost contact members being removed from time-to-time as the anode is consumed, thus creating preformed gas channels to relieve the shrouding effect of the gas.

3,375,186
APPARATUS FOR THE MANUFACTURE OF ELECTRICAL COILS

Addison Romaine Smith II, Louisville, Ky., assignor to Anaconda Aluminum Company, a corporation of Montana

Original application Feb. 19, 1962, Ser. No. 174,171, now Patent No. 3,334,413, dated Aug. 8, 1967. Divided and this application Mar. 9, 1967, Ser. No. 643,755
4 Claims. (Cl. 204—297)

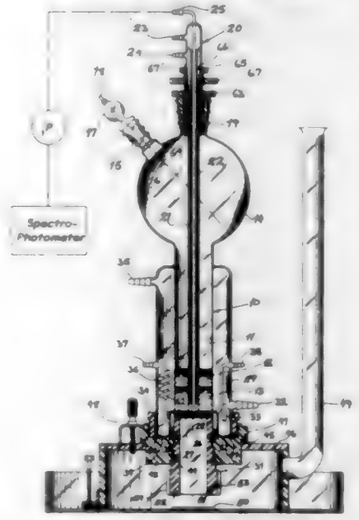


An anodizing rack for anodizing the side edges of rolls of strip conductor material prior to winding the edge anodizing strip into coil which includes anode contact members mounted on a support which have a contact arm extending radially outward from the supporting member on opposite sides of each roll to span the multiplicity of turns and the arm having a minute thickness in cross section adjacent the roll to make knife edge contact along the edge portions of a plurality of turns of each roll.

3,375,187
APPARATUS FOR TEMPERATURE CONTROLLED PREPARATIVE AND ANALYTICAL ELECTROPHORESIS

Joseph Buchler, Fort Lee, N.J., assignor to Buchler Instruments, Inc., Fort Lee, N.J., a corporation of the United States

Filed May 13, 1965, Ser. No. 455,401
16 Claims. (Cl. 204—301)



1. In an apparatus for gel electrophoresis having an upright gel column, a buffer reservoir above said gel column, a buffer reservoir above said gel column, a membrane below said gel column defining therewith an elution chamber, an elution tube extending centrally through said column, means for supplying an elution liquid to said chamber around the periphery thereof, and a cooling jacket surrounding said gel column, the improvement which comprises annular collar means connected with said column; and generally tubular membrane-support means adjustably mounted in said collar means and carrying said membrane.

3,375,188
PROCESS FOR DEASHING COAL IN THE ABSENCE OF ADDED HYDROGEN

Ward J. Bloomer, Westfield, N.J., assignor to The Lummus Company, New York, N.Y., a corporation of Delaware

Continuation of application Ser. No. 326,030, Nov. 26, 1963. This application Dec. 19, 1966, Ser. No. 603,053
8 Claims. (Cl. 208—8)

1. A process for deashing a coal selected from the group consisting of bituminous coal, subbituminous coal and lignite comprised of extractable carbonaceous matter, fusain and mineral matter, which comprises:

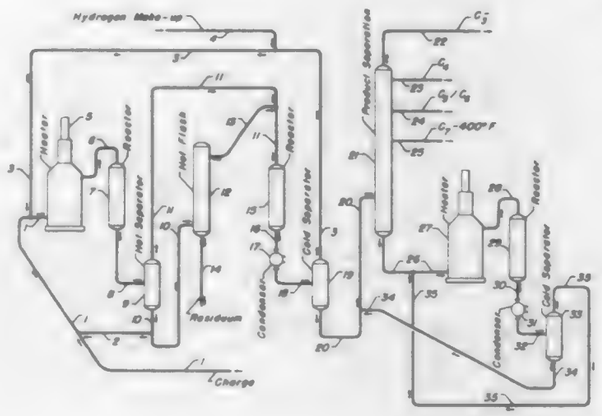
(a) mixing the coal in crushed form in the absence of added hydrogen with a high boiling aromatic liquid solvent having cutpoints, converted to one atmosphere, of from about 600 to about 900° F. to form a solution of said extractable carbonaceous matter wherein solids including insoluble fusain and mineral matter are suspended; and

(b) separating said suspended solids from said solution.

3,375,189
CONVERSION OF BLACK OILS TO MAXIMIZE GASOLINE PRODUCTION

Robert J. J. Hamblin, Deerfield, Ill., assignor to Universal Oil Products Company, Des Plaines, Ill., a corporation of Delaware

Filed Nov. 30, 1966, Ser. No. 598,055
5 Claims. (Cl. 208—59)



1. A process for the conversion of a hydrocarbon charge stock of which at least about 10.0% boils above about 1050° F., and which contains more than about 1.0% by weight of sulfur, into lower boiling, substantially sulfur-free hydrocarbon products, which process comprises the steps of:

(a) admixing said charge stock with hydrogen, heating the resulting mixture to a temperature above about 700° F. and contacting the heated mixture with a catalytic composite in a first reaction zone maintained under an imposed pressure above about 1000 p.s.i.g.;

(b) separating the resulting reaction zone effluent in a first separation zone at substantially the same pressure imposed upon said first reaction zone and at a temperature above about 700° F., to provide a first vapor phase and a first liquid phase;

(c) combining at least a portion of said first liquid phase with said charge stock and hydrogen, and separating the remainder of said first liquid phase in a second separation zone at a substantially reduced pressure to provide a residuum fraction and a second vapor phase;

(d) combining said first and second vapor phases, and reacting the resulting mixture in a second reaction zone at conditions selected to convert sulfurous compounds into hydrogen sulfide and hydrocarbons, and to produce lower molecular weight normally liquid hydrocarbons;

(e) separating the resulting second reaction zone effluent in a third separating zone into a first hydrogen-rich gaseous phase and a second liquid phase, fractionating the latter to provide at least a first lighter fraction having an end boiling point of from about 300° F. to about 450° F. and a second heavier fraction having an initial boiling point above about 300° F.;

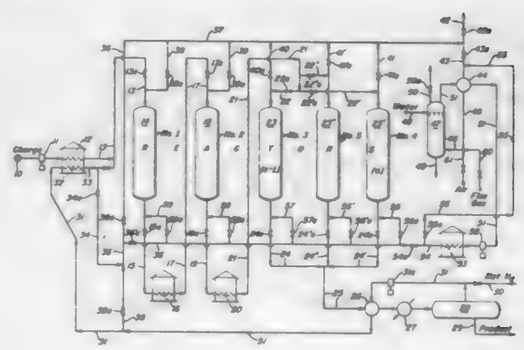
(f) admixing said second heavier fraction with hydrogen and reacting the resulting mixture in a third reaction zone at hydrocracking conditions, and in contact with a hydrocracking catalyst, selected to convert a portion of said second fraction into lower-boiling hydrocarbons; and

(g) separating the third reaction zone effluent, in a fourth separation zone, into a second hydrogen-rich gaseous phase and a third liquid phase, recycling said second hydrogen-rich gaseous phase to combine with said second heavier fraction, and combining said third liquid phase with said second liquid phase prior to fractionating the latter as aforesaid.

3,375,190
SOLUBLE PLATINUM CONTENT OF FIRST REACTOR BELOW 40% AND SUBSEQUENT REACTOR ABOVE 40%

Keith W. McHenry, Jr., Park Forest, Ill., Harry M. Brennan, Hammond, Ind., and Edmond L. d'Ouville, La Grange, Ill., assignors to Standard Oil Company, Chicago, Ill., a corporation of Indiana

Continuation-in-part of application Ser. No. 41,336, July 7, 1960. This application Dec. 27, 1963, Ser. No. 333,815
3 Claims. (Cl. 208—65)



1. A process for hydroforming desulfurized petroleum hydrocarbons in the presence of hydrogen gas, which process comprises passing said hydrocarbons and hydrogen gas into an initial hydroforming stage containing a first quantity of platinum-alumina-chloride reforming catalyst under hydroforming conditions, said platinum-alumina-chloride catalyst comprising 0.01 to 2.0 weight percent platinum, 0.05 to 5.0 weight percent chlorine, and an alumina-containing base, said first quantity of catalyst having a soluble platinum content of less than about 40 weight percent, withdrawing a stream of hydrocarbons and hydrogen from said initial stage and passing said stream to at least one subsequent hydroforming stage, said subsequent stage containing a second quantity of platinum-alumina-chloride reforming catalyst, said platinum being in the plus-four valence state, effecting additional hydroforming in said subsequent hydroforming

stage under processing conditions favoring the dehydrocyclization of paraffins to aromatics, maintaining in the catalyst of said subsequent stage a plus-four valence platinum content of at least 40 weight percent by periodically discontinuing hydroforming over at least a portion of catalyst in said subsequent stage and contacting said catalyst with an oxygen-containing gas to restore the soluble platinum content to a substantially high level, and recovering the thus hydroformed petroleum hydrocarbons.

3,375,191

PROCESS FOR THE HYDROCRACKING OF HYDROCARBONS WITHOUT A NET CONSUMPTION OF HYDROGEN

William Charles Pfefferle, Middletown, N.J., assignor to Engelhard Industries, Inc., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 203,487, June 19, 1962. This application Mar. 25, 1966, Ser. No. 537,310

4 Claims. (Cl. 208—112)

1. A process for the conversion of relatively higher molecular weight hydrocarbons to hydrocarbons of relatively lower molecular weight without a net consumption of hydrogen which comprises introducing into and maintaining in a reaction zone and reacting a mixture consisting essentially of (A) a relatively higher molecular weight hydrocarbon, (B) a C_1 to C_3 alkane and (C) hydrogen in a ratio of at least one mole of (B) per mole of (A) and a molar ratio of (C) to (B) less than 1:1 at a total pressure of about 50 to about 700 p.s.i.g., a hydrogen partial pressure of less than 200 p.s.i.g., a temperature of about 650° to about 900° F., a weight hourly space velocity of 0.05 to 20 and in contact with a platinum group metal on acidic alumina catalyst, the reaction period being at least 48 hours in duration and the carbon yield on feed at the end of the reaction period being less than 0.5% by weight.

3,375,192

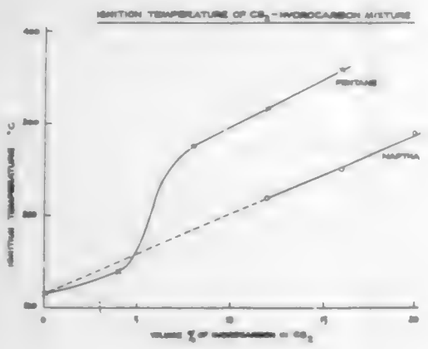
METHOD FOR CLEANING OIL AND GAS WELLS EMPLOYING CARBON DISULFIDE-PENTANE MIXTURES

Hugh Charles Rowlinson, St-Hilaire, Quebec, Canada, assignor to Canadian Industries Limited, Montreal, Quebec, Canada, a corporation of Canada

Filed Sept. 10, 1965, Ser. No. 486,497

Claims priority, application Great Britain, Sept. 25, 1964, 39,139/64

2 Claims. (Cl. 252—8.55)



The use of a mixture of 92% to 84% by volume of carbon disulfide and 8% to 16% by volume of pentane for cleaning oil and gas wells, particularly for removal of wax and sulfur deposits therein. The addition of 8% to 16% by volume of pentane to the carbon disulfide raises the ignition temperature of the carbon disulfide and thereby reduces the fire hazard of the same.

3,375,193

METALWORKING LUBRICANT

Sergio A. Ruzza, Warren, and Homer C. Brush, Royal Oak, Mich., assignors to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

No Drawing. Filed July 5, 1966, Ser. No. 563,641

9 Claims. (Cl. 252—23)

A water dispersible composition which when applied to the surface of metal stock forms a fast drying, continuous protective film which serves as a lubricant when the metal stock is worked. The composition comprises a protective colloid, a fatty acid soap, an organic acid, a lubricant pigment and potassium-sodium tartrate.

3,375,194

PIEZOELECTRIC LEAD ZIRCONATE TITANATE CONTAINING RHODIUM

Tsuneo Akashi, Masao Takahashi, Fumio Yamauchi, Norio Tsubouchi, and Tomeji Ohno, Tokyo, Japan, assignors to Nippon Electric Company Limited, Tokyo, Japan

Filed Feb. 5, 1965, Ser. No. 430,550

Claims priority, application Japan, Feb. 13, 1964, 39/7,525

3 Claims. (Cl. 252—62.9)

A lead zirconate titanate piezoelectric ceramic containing 0.01 to 1.0 weight percent of rhodium sesquioxide in solid solution. The rhodium sesquioxide causes the lead zirconate titanate to assume extremely high electromechanical coupling and mechanical quality factors.

3,375,195

ELECTROMECHANICAL TRANSDUCER EMPLOYING PIEZOMAGNETIC MANGANESE FERROUS FERRITE

Frank G. Brockman, Dobbs Ferry, Paul W. Beck, Irvington, and Walter G. Steneck, Ossining, N.Y., assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Continuation of application Ser. No. 312,687, Sept. 30, 1963. This application Nov. 14, 1966, Ser. No. 594,255

1 Claim. (Cl. 252—62.56)

A manganese-ferrous ferrite core suitable for use in an electromechanical transducer. The core has a coupling coefficient of 30% or more. The core is prepared by mixing manganese and ferric oxides in proportions corresponding to the composition of the core, followed by prefiring the mixture, molding cores, and sintering and cooling in atmospheres in which the ratio of carbon dioxide to carbon monoxide is adjusted to result in the formation of an amount of ferrous oxide corresponding to the amount of ferrous iron in the composition.

3,375,196

METHOD FOR INTRODUCING CALCIUM OXIDE INTO MANGANESE-ZINC FERRITE MAGNETIC MATERIALS

Kiyoshi Muramori, Koichi Yaguchi and Katsumi Watanabe, Yokohama, and Hideo Abe, Yokosuka-shi, Japan, assignors to Hitachi, Ltd., Tokyo, Japan, a corporation of Japan

Filed Feb. 2, 1965, Ser. No. 429,727

Claims priority, application Japan, Feb. 5, 1964, 39/5,741

9 Claims. (Cl. 252—62.63)

The present disclosure relates to a method for producing a manganese-zinc ferrite magnetic material which comprises preparing a mixture of manganese-zinc ferrite-forming raw materials, subjecting the mixture to preliminary firing so that at least a portion of the mixture is crystallized in the form of ferrite, adding a calcium salt in an amount of about .01 to .1% by weight of the mixture, pulverizing the fired mixture, molding the pulverized mixture and sintering the molded body. According to the present disclosure the calcium salt additive is added after

a mixture of raw materials has been subjected to preliminary firing to properly transform the mixture into ferrite, so that the major portion of the additive is precipitated at the grain boundaries of the crystals.

3,375,197

REFRIGERATION SYSTEM LUBRICATION

Hans O. Spauschus, Anchorage, and Dietrich F. Huttenlocher, Louisville, Ky., assignors to General Electric Company, a corporation of New York

No Drawing. Filed July 30, 1964, Ser. No. 386,401

5 Claims. (Cl. 252—68)

1. In the method of operating a refrigeration system of the hermetically sealed, compression type employing dichlorodifluoromethane as a refrigerant and a mineral oil lubricant in contact with said refrigerant, the improvement which comprises lubricating said refrigeration system with a mineral oil lubricant having dissolved therein from 0.01 to 3 percent by weight of a compound of the formula

$$(RO-)_2\overset{S}{\overset{\|}{P}}-S-M-S-\overset{S}{\overset{\|}{P}}(-OR)_2$$

in which M represents a metal selected from the group consisting of zinc, cadmium and nickel and R represents the same or different hydrocarbon radicals selected from the group consisting of alkyl, aryl, alkaryl and aralkyl radicals containing at least 3 carbon atoms, said compound being effective to inhibit reaction between said oil and said refrigerant in the presence of steel.

3,375,198

ALKALI METAL PERBORATES

Walter Jacob Rosenfelder, London, England, assignor to United States Borax & Chemical Corporation, Los Angeles, Calif.

No Drawing. Filed June 7, 1965, Ser. No. 462,046

Claims priority, application Great Britain, July 24, 1964, 29,782/64

15 Claims. (Cl. 252—99)

Dry, granular alkali metal perborate is produced by mixing with agitation a particulate alkali metal metaborate and hydrogen peroxide in the presence of water not exceeding the amount required to form a product having no uncombined water. Preferably not more than about 80% of the theoretical requirement of water is used. The alkali metal metaborate can also be formed in situ by reaction of a borate, such as sodium tetraborate, with sodium hydroxide. Composite granules having a core of sodium borate and an adherent shell of sodium perborate can be formed.

3,375,199

CLEANER-DISINFECTANT COMPOSITION

Robert Henry Trimmer, East Brunswick, N.J., assignor to Colgate-Palmolive Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed Nov. 29, 1963, Ser. No. 327,081

1 Claim. (Cl. 252—106)

1. A solid granular free flowing detergent composition particularly suitable for hard surface cleaning and disinfection consisting essentially of about 35 to 55% by weight of sodium carbonate and about 15 to 25% by weight of sodium tripolyphosphate, as water soluble inorganic normal builder salts, about 20 to 30% by weight of sodium bicarbonate as water soluble inorganic acid salt, about 2% by weight of sodium lauryl alcohol sulfate and about 3 to 4% by weight of ortho-benzyl-para-chlorophenol, said amounts being by weight of total solids proportioned to form a water solution containing from about ½ to 2% by weight of said solids having a pH of about 9.6 to 10 with said chlorophenol essentially in solution and exhibiting thereby effective disinfecting action against a broad spectrum of microorganisms.

3,375,200

COOLING WATER TREATMENT AND COMPOSITIONS USEFUL THEREIN

Reed S. Robertson, Glen Ellyn, Ill., assignor to Nalco Chemical Company, Chicago, Ill., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 266,193, Mar. 19, 1963. This application Aug. 17, 1965, Ser. No. 480,523

2 Claims. (Cl. 252—181)

1. A corrosion inhibiting composition for use in cooling waters which comprises in combination:

(1) a bisulfited water dispersible tannin, said tannin having been disulfited by reaction with a material selected from the group consisting of ammonium bisulfite, sodium bisulfite, and potassium bisulfite at a temperature of from 50° C. to about 200° C. for from about 0.5 hour to about 4.0 hours, and

(2) pyrophosphate, the ratio by weight of the materials being from about 1:4 to 4:1, said bisulfited water dispersible tannin having been condensed with formaldehyde.

ERRATUM

For Class 252—188.3 see:
Patent No. 3,375,176

3,375,201

SILICA GEL-ASBESTOS COMPOSITIONS

Milton E. Winyall, 116 Beachwood Drive, Ellicott City, Md. 21043

No Drawing. Filed Oct. 20, 1965, Ser. No. 499,065

9 Claims. (Cl. 252—194)

A non-decrepitating desiccant silica gel is prepared by admixing asbestos fiber with a silica hydrosol, gelling the hydrosol and subsequently drying and activating the gelled product at elevated temperatures. The present silica-asbestos desiccant possessed increased decrepitation resistance.

3,375,202

SEPARATING SUBSTANCES IN SOLUTION AS SALTS BY USING A COLLOIDAL DISPERSION OF MIXED FERROCYANIDES

Francoise Laveissiere and André Bonnin, Antony, and Philippe Poirier, Versailles, France, assignors to Societe Saint Gobain Techniques Nouvelles, Courbevoie, Siene, France

No Drawing. Continuation-in-part of application Ser. No. 352,345, Mar. 16, 1964. This application Sept. 29, 1964, Ser. No. 400,204

Claims priority, application France, Oct. 1, 1963, 949,225

18 Claims. (Cl. 252—301.1)

This invention is directed to the process of extracting particular substances from a solution by the utilization of a fine colloidal dipsersion of a solid which has an affinity for the substances to be separated. The process generally comprises the steps of contacting the solution with the dispersion so as to fix the substances to be separated on the solid and then separating the dispersion from the solution.

3,375,203

URANIUM OXIDE SOLS

Forrest R. Hurley, 9 Font Hill Drive, Ellicott City, Md. 21043; Melvin Tecotzky, 570 Oxford Ave., Apt. E, Palo Alto, Calif. 94306; and Milton Charles Vanik, 18 Windward Drive, Severna Park, Md. 21146

No Drawing. Continuation-in-part of application Ser. No. 290,170, June 24, 1963, which is a continuation-in-part of application Ser. No. 1,159, Jan. 8, 1960. This application June 20, 1966, Ser. No. 558,616

4 Claims. (Cl. 252—301.1)

Sols of uranium dioxide composed of particles in the size range of 60 to 1900 Angstrom units, having a pH

between 1 to 5 and a specific conductivity of 10^{-5} to 10^{-2} mhos per centimeter.

3,375,204
REGENERATION OF MOLECULAR SIEVE ADSORBENTS
Ronald C. Hoke, Berkeley Heights, N.J., assignor to Esso Research and Engineering Company, a corporation of Delaware
Continuation of application Ser. No. 757,367, Aug. 26, 1958. This application Feb. 12, 1963, Ser. No. 259,773
12 Claims. (Cl. 252—419)

Molecular sieve adsorbents are regenerated by burning carbonaceous deposits via a three-step process involving heating, treating with controlled oxygen stream and contacting with air, while controlling water concentration to below detrimental level.

3,375,205
SYNTHETIC ZEOLITE
Robert L. Wadlinger, Oneonta, N.Y., and Edward J. Rosinski, Almonesson, and Charles J. Plank, Woodbury, N.J., assignors to Mobil Oil Corporation, a corporation of New York
No Drawing. Filed Nov. 13, 1962, Ser. No. 237,289
15 Claims. (Cl. 252—455)

1. A crystalline synthetic material having the composition:

$$0.2 \text{ to } 0.5\ R_{2/m}O{:}0.5 \text{ to } 0.8\ M_{2/n}O{:}1\ Al_2O_3{:}\ >4.0 \text{ to } 7.0\ SiO_2 \cdot Y\ H_2O$$

where R represents ions selected from the group consisting of metal, methyl ammonium, hydrogen and mixtures thereof with one another; m is the valence of R; M represents ions selected from those of the group consisting of hydrogen, metal and hydrogen-metal mixtures, n is the valence of M and Y is any value up to about 8.0, said material being capable of selectively sorbing straight chain hydrocarbons of more than three carbon atoms from admixture of the same with non-straight chain hydrocarbons when M is sodium and characterized by an X-ray powder diffraction pattern essentially the same as that shown in Table A.

3,375,206
CHEMICAL REACTION CATALYST AND ITS PREPARATION
Herbert C. Shaw, Kenmore, N.Y., assignor to Union Carbide Corporation, a corporation of New York
Filed Sept. 9, 1964, Ser. No. 395,221
21 Claims. (Cl. 252—455)

Molecular sieve chemical reaction catalyst bodies are prepared by providing a three-dimensional crystalline alumino-silicate containing water of hydration, having a SiO_2/Al_2O_3 greater than 3 and pores sufficiently large to accept benzene. The hydrated material is compacted into dense uniformly shaped bodies and thereafter heated to above 250° C. and below the crystalline destruction point for sufficient duration to leave only 2–3 percent by weight of the activated molecular sieve as residual water.

3,375,207
CATALYTIC POLYMERIZATION OF ALKYLENE OXIDES
Herbert C. Kaufman, New Haven, Conn., assignor to Olin Mathieson Chemical Corporation, a corporation of Virginia
No Drawing. Continuation-in-part of application Ser. No. 232,258, Oct. 22, 1962. This application Oct. 20, 1964, Ser. No. 405,277
8 Claims. (Cl. 260—2)

In the process for polymerizing an alkylene oxide selected from the group consisting of ethylene oxide, propylene oxide, butylene oxide, 4,4,4-trichlorobutylene oxide-1,2, styrene oxide, and mixtures thereof by heating the oxide in the presence of a catalyst, the improvement which comprises employing as said catalyst a catalytic proportion of a mixture of aluminum hydride and certain metal acetylacetonates.

3,375,208
METHOD FOR PREPARING A MICROPOROUS THERMOPLASTIC RESIN MATERIAL
Joseph C. Duddy, Trevose, Pa., assignor to ESB Incorporated, a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 267,366, Mar. 22, 1963. This application July 26, 1967, Ser. No. 655,996
18 Claims. (Cl. 260—2.1)

A method for preparing a microporous thermoplastic resin material by treating a thermoplastic resin composition with a leaching solvent to remove one or more pore forming agents. A solid, particulate thermoplastic resin which is insoluble in the leaching solvent is intimately mixed under heat and pressure with a solid, particulate thermoplastic resin which is soluble in the leaching solvent to soften the resins into a plasticized mass. The melt is shaped and then contacted with the leaching solvent to remove substantially all ot the soluble thermoplastic resin, thereby rendering the insoluble resin microporous. The thermoplastic resin composition can be loaded with filler material, and an additional pore forming agent can be incorporated into the resin composition to provide an exceptionally large pore volume upon removal of the pore forming agents.

3,375,209
POROUS FILM AND METHOD OF MAKING
Charles R. Kemper, 500 Canterbury Drive, Dayton, Ohio 45429
No Drawing. Filed May 25, 1964, Ser. No. 370,048
5 Claims. (Cl. 260—2.5)

Breathable polyvinyl chloride sheets are formed from a plastisol mixture of polyvinyl chloride and a plasticizer, having dispersed therethrough particulate sodium tetraborate decahydrate (borax) capable of passing through a 100 U.S. standard mesh screen. The plastisol mixture is formed into sheets and thereafter heated to between 300° F. and 400° F. for release of water of hydration from the borax which forms small channels through the sheet as the latter is being cured. The cured sheet is then treated with water to leach out the anhydrous borax thus leaving a vapor permeable polyvinyl chloride sheet.

3,375,210
METHOD OF PRODUCING CARBONATE POLYMER FOAMS
Anthony A. D'Onofrio, Martinsville, N.J., assignor to Union Carbide Corporation, a corporation of New York
No Drawing. Filed Aug. 25, 1964, Ser. No. 392,020
9 Claims. (Cl. 260—2.5)

Process for preparing a (2,2,4,4-tetramethyl-1,3-cyclobutylene)carbonate polymer foam comprising the steps of heating a normally solid (2,2,4,4-tetramethyl-1,3-cyclobutylene)carbonate polymer wherein the cyclobutylene carbonate moiety is present in a mole percent of at least about 50 percent, to a temperature above its melting point, maintaining the molten mass at a temperature and for a period of time sufficient to cause the evolution of gaseous polymer degradation products, maintaining a pressure about the molten polymer mass such that the gaseous products are retained within the molten polymer mass, and cooling the polymer mass to a temperature sufficient to cause solidification.

3,375,211
ULTRAMICROCELLULAR POLYMERIC STRUCTURES CONTAINING AN INFLATANT
Robert Guy Parrish, Sharpley, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 302,720, Aug. 16, 1963. This application Feb. 14, 1967, Ser. No. 615,883
21 Claims. (Cl. 260—2.5)

An ultramicrocellular structure, the cells of which contain an inflatant whose permeability coefficient for diffusion through the cell walls is less than that of air, can be obtained by flash-extruding a solution of a polymer in an activating liquid, which solution also contains the inflatant. Upon extrusion, the cells of the structure are partially collapsed but unruptured. Upon exposure to air the structure self-inflates due to diffusion of air into the cells.

3,375,212
MICROCELLULAR POLYMERIC STRUCTURE
Willard Hallam Bonner, Jr., Gordon Heights, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 302,721, Aug. 16, 1963. This application Feb. 14, 1967, Ser. No. 615,884
7 Claims. (Cl. 260—2.5)

A metastable, collapsed, relatively dense microcellular foam structure composed of a polymer having a glass transition temperature of at least 40° C. The closed cells of the structure contain an impermeant inflatant which provides an osmotic driving force for entry of air and consequent expansion of the foam. However, the structure having been set in the collapsed condition, the wrinkled cell walls are rigid and resist expansion until temperature of the sample is raised above the glass transition temperature of the polymer, or until the sample is treated with a plasticizer.

3,375,213
MODIFICATION OF STEREOREGULAR POLYOLEFINS WITH SYNERGISTIC POLYMERIC COMBINATIONS
Jack J. Press, 12–18 E. Laurelton Parkway, Teaneck, N.J. 07666
No Drawing. Continuation-in-part of application Ser. No. 113,972, Apr. 4, 1961. This application Oct. 27, 1964, Ser. No. 406,939
5 Claims. (Cl. 260—17)

Stereoregular polypropylene, polymethylpentene, and polymethylbuteene have qualities desirable for processing into fibers, yarn, and cloth. Dyeability of these materials is improved by dispersing therethrough a combination of modifier materials consisting of 50 to 95% by weight of a hydrophilic polymer nonsoluble in the stereoregular material and the remainder of a lower molecular weight organic substance having at least one organic group of 6 to 30 carbon atoms; the combination of modifier materials consisting of 2 to 20 percent by weight of the composition consisting of the stereoregular material and the modifier materials. The modifier materils complement each other synergistically.

3,375,214
PROCESS FOR PREPARING MODIFIED ALKYD RESINS HAVING INCREASED RESILIENCE AND RESISTANCE TO CRACKING
Donald Alfred Bennett, Beaulieu, England, assignor to The International Synthetic Rubber Company Limited, Southampton, England, a company of the United Kingdom
No Drawing. Filed Oct. 24, 1963, Ser. No. 318,500
Claims priority, application Great Britain, Oct. 25, 1962, 40,463/62
9 Claims. (Cl. 260—22)

1. A process for preparing a modified alkyd resin having increased resilience and resistance to cracking, comprising (1) reacting a solvent material selected from the group consisting of glyceride oil, unsaturated acids of glyceride oil, and mixtures of an unsaturated glyceride oil with at least one saturated fatty acid with a rubbery polymer of a conjugated diene, said polymer being soluble in said solvent material, and having a molecular weight in the range of 5,000 to 200,000, by heating a solute of said rubbery polymer in said solvent material to form a polymer-solvent reaction product having a viscosity not greater than about 100,000 poises at 25° C. (2) reacting the product of said polymer and said solvent with a polyhydroxy compound and a material selected from the group consisting of organic dibasic acids and organic dibasic anhydrides.

3,375,215
CELLOPHANE COATING COMPOSITIONS COMPRISING VINYLIDENE CHLORIDE COPOLYMER, CANDELILLA WAX AND STEARATE SALT
William P. Kane, Bon Air, Va., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
No Drawing. Filed Sept. 18, 1964, Ser. No. 397,608
20 Claims. (Cl. 260—23)

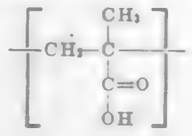
A heat-sealable coating composition for organic film, e.g., regenerated cellulose film comprising as the essential ingredients in a volatile organic solvent (1) a copolymer of vinylidene chloride and at least one other ethylenically unsaturated monomer copolymerizable therewith, said copolymer containing at least 87% by weight of vinylidene chloride; (2) from 2 to 6 parts by weight of candelilla wax per 100 parts of said copolymer, and (3) from 1 to 3 parts of a stearate salt selected from the group consisting of calcium and ammonium stearates. Optionally, the composition may also contain from 0.05 to 2 parts of a solid particulate material as slip agent, from 0.1 to 1 part of an organic carboxylic acid as a viscosity depressant, from 0.5 to 2.5 parts of a saturated or olefinically unsaturated amide or ketone as an additional antiblocking agent, and up to 1 part of a blending resin. The coated film releases readily from crimp seal bars used in automatic packaging machines.

3,375,216
HEAT STABILIZED AND PLASTICIZED VINYL CHLORIDE POLYMER COMPOSITIONS
Wayne E. Smith, Shawnee, Kans., and Harry D. Anspon, Kansas City, Mo., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware
No Drawing. Continuation-in-part of application Ser. No. 524,488, Feb. 2, 1960. This application Feb. 2, 1966, Ser. No. 524,455
6 Claims. (Cl. 260—30.4)

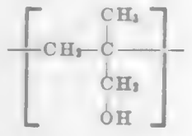
1. A composition comprising (A) a vinyl chloride polymer and (B) a stabilizer/plasticizer salt of a polymer of partially lactonized poly (methyl propanol/methacrylic acid) with a divalent metal from Group II of the Periodic Table or with tin, said partially lactonized poly (methyl propanol/methacrylic acid) having a molecular weight

in the range of about 200 to about 2000, being substantially free of aldehyde and acetal groups, and containing monomeric units of the structures:

(a)

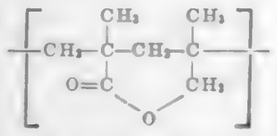


(b)



and

(c)



where said partially lactonized polymer contains from about 5 to about 40 mole percent each of monomeric structures (*b*) and (*a*) and about 20 to 90 mole percent monomeric structure (*c*).

3,375,217

PLASTICIZED VINYL CHLORIDE POLYMERS

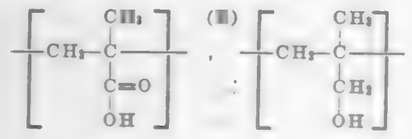
Wayne E. Smith, Shawnee, Kans., and Harry D. Anspon, Kansas City, Mo., assignors to Gulf Research & Development Company, Pittsburgh, Pa., a corporation of Delaware

No Drawing. Filed Feb. 2, 1966, Ser. No. 524,488

4 Claims. (Cl. 260—30.4)

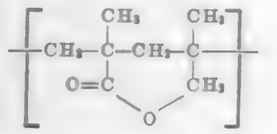
1. A composition comprising (A) a vinyl chloride polymer and (B) a plasticizer compounded therewith, said plasticizer comprising a polymer of partially lactonized poly (methyl propanol/methacrylic acid) having a molecular weight from about 200 to about 2000, being substantially free of aldehyde and acetal groups, and containing monomeric units of the structures:

(A) (B)



and

(C)



where said partially lactonized polymer contains from about 20 to about 90 mole percent of monomeric structure (C) and about 15 to about 40 mole percent of monomeric structures (A) and (B).

3,375,218

NITROARYLSILANES AND SILOXANES

Donald L. Bailey, Snyder, N.Y., and Ronald M. Pike, Pelham, N.H., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 655,505, Apr. 29, 1957. This application Dec. 7, 1962, Ser. No. 242,934

5 Claims. (Cl. 260—37)

5. A curable gum compound comprising:

(1) a gum consisting essentially of from 1 to 99 mole percent nitroarylsiloxane groups represented by the formula:

$$[O_2N-ArC_aH_{2a}]_b-SiO_{\frac{4-(d+b)}{2}}$$

wherein Ar is a member selected from the group consisting of the unsubstituted phenylene radical, the alkyl-substituted phenylene radicals and the alkoxy-substituted phenylene radicals; X is an alkyl radical group containing from 1 to 4 carbon atoms inclusive; *a* has a value from 0 to 8 inclusive; *b* has a value from 1 to 2 inclusive; *d* has a value from 0 to 1 inclusive; $(d+b)$ is two; and $4-(d+b)$ is two and from 1 to 99 mole percent hydrocarbonsiloxane groups represented by the formula:

$$R_eSiO_{\frac{4-e}{2}}$$

wherein R is a monovalent hydrocarbon group and *e* has a value of 2;

(2) a curing agent for converting the gum compound to an elastomer; and

(3) a filler.

3,375,219

PIGMENTING POLYCARBONAMIDE BY MEANS OF AN ETHYLENE COPOLYMER CARRIER RESIN

Howard E. Robb, Henderson, Ky., assignor to Gulf Oil Corporation, Pittsburgh, Pa., a corporation of Pennsylvania

No Drawing. Filed Nov. 23, 1964, Ser. No. 413,319

16 Claims. (Cl. 260—41)

Finely divided pigments are uniformly dispersed in polycarbonamide resins by admixing therewith a compatible ethylene copolymer carrier resin, said carrier resin neither reacting with nor detracting from the properties of the polycarbonamide and containing therein the finely divided pigment uniformly distributed throughout the carrier resin.

3,375,220

POLYURETHANE PRODUCT

Charles C. Clark, Kenmore, and Herbert M. Schroeder, Williamsville, N.Y., and Lloyd R. Garrison, Trenton, Mich., assignors to Textron Inc., a corporation of Rhode Island

No Drawing. Filed Aug. 9, 1965, Ser. No. 478,445

20 Claims. (Cl. 260—45.7)

A polyurethane fire-retardant coating composition consisting essentially of the reaction product of aromatic hydrocarbon diisocyanate and nitropolyhydric alkanol; the composition contains tris(haloalkyl)phosphate to improve the fire-retardant properties.

3,375,221

STABILIZATION OF RUBBER

Henryk A. Cyba, Evanston, Ill., assignor to Universal Oil Products Company, Des Plaines, Ill., a corporation of Delaware

No Drawing. Filed Mar. 10, 1965, Ser. No. 438,771

The portion of the term of the patent subsequent to Apr. 20, 1982, has been disclaimed

3 Claims. (Cl. 260—45.9)

Rubber normally subject to oxidative deterioration containing, as an inhibitor against such deterioration, a stabilizing concentration of dicyclohexyldiaminodiphenyl alkane such as, for example, 4,4'-dicyclohexyldiaminodiphenyl methane.

3,375,222

SOLID STATE STABILIZATION OF CRUDE ALKALI METAL POLYSTYRENE SULFONATES WITH WATER-SOLUBLE NITRITE

William E. Smith, Midland, and Henry Volk, Bay City, Mich., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Aug. 26, 1964, Ser. No. 392,288

5 Claims. (Cl. 260—45.9)

1. A stabilized, crude alkali metal polystyrene sulfonate solid polymer composition having uniformly admixed therewith from about 0.5 up to about 30 percent by weight of a water-soluble nitrite based on the weight of the polymer.

3,375,223

METHOD FOR POLYMERIZING ORGANOPOLYSILOXANES

Duane F. Merrill, Ballston Spa, N.Y., assignor to General Electric Company, a corporation of New York

No Drawing. Filed Oct. 1, 1964, Ser. No. 400,934

6 Claims. (Cl. 260—46.5)

A method is provided for making organopolysiloxane resins utilizing a hydrogen chloride activated particulated siliceous material as a bodying catalyst. The resulting resin has been found to have improved shelf life stability and reduced cure time.

3,375,224

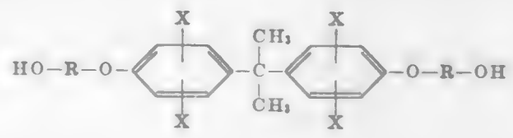
POLYURETHANE IMPREGNATING AND BONDING RESIN

David E. Cordier and Victor V. D'Ancicco, Hamden, and Richard A. Kolakowski, Northford, Conn., assignors to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed Jan. 10, 1964, Ser. No. 336,889

3 Claims. (Cl. 260—47)

A storage stable composition which is heat curable to a tough flexible polyurethane coating consists of a mixture, in an inert solvent, of (1) a polymethylene polyisocyanate capped with phenol or alkyl (C_{1-9}) phenol and (2) a mixture of (*i*) an hydroxy terminated poly(ethylene/propylene)adipate of equivalent weight 300 to 1,200 and (*ii*) a halogenated compound having the structure:



wherein X is selected from the class consisting of Cl and Br and R is selected from the class consisting of —CH_2—CH_2— and

Fabric and fabric-sheathed insulated conductors coated using said compositions are disclosed.

3,375,225

MODIFIED POLYPHENYLENE ETHERS

John J. Keane and Daniel W. Fox, Pittsfield, and Willem F. H. Borman, Dalton, Mass., assignors to General Electric Company, a corporation of New York

No Drawing. Filed Feb. 1, 1965, Ser. No. 429,651

7 Claims. (Cl. 260—47)

A polyarylene ether having pendant phenolic groups as substituents on the polymer backbone. The phenolic groups activate the polymer so that it may be crosslinked with crosslinking agents such as formaldehyde or with heat.

3,375,226

SUBSTITUTED PHENOXY COMPOUNDS AND CURED POLYEPOXIDES OBTAINED THEREFROM

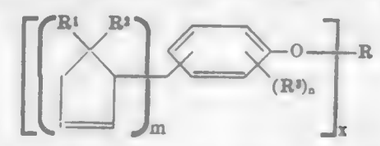
Ralph F. Sellers, Somerset, Samuel G. Smith, Jr., Hillsborough Township, and Allison S. Burhans, Bernards Township, N.J., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Jan. 28, 1966, Ser. No. 523,533

16 Claims. (Cl. 260—47)

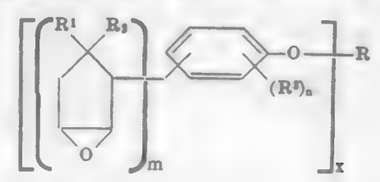
1. A substituted phenoxy compound selected from the group consisting of compounds having the formula:

(a)



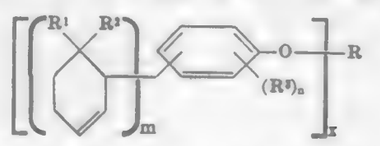
wherein R is a hydrocarbon radical having a valence of 2 to 4 inclusive, *x* is an integer equal in value to the valence of R, R^1 and R^2 are hydrogen or alkyl containing a maximum of 6 carbon atoms, R^3 is an alkyl radical containing a maximum of 6 carbon atoms, an alkoxy radical containing a maximum of 6 carbon atoms or halogen, *m* is an integer having a value of 1 to 3 inclusive, *n* is an integer having a value of 0 to 5-*m* inclusive and with the further limitation that each cyclopentenyl group is in a position other than meta to the —O—R group;

(b)



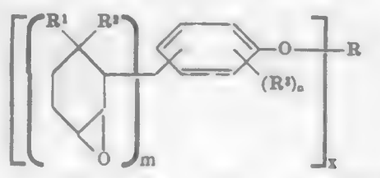
wherein R, R^1, R^2, R^3, *m*, *n* and *x* are as defined in (a) and the position of each epoxidized cyclopentyl group is in a position other than meta to the —O—R group;

(c)



wherein R, R^1, R^2, R^3, *m*, *n* and *x* are as defined in (a) and the position of each cyclohexenyl group is in a position other than meta to the —O—R group;

(d)



wherein R, R^1, R^2, R^3, *m*, *n* and *x* are as defined in (a) and the position of each epoxidized cyclohexyl group is in a position other than meta to the —O—R group.

3,375,227

CARBOXY-HYDROXY-CONTAINING COPOLYMERS

Darrell D. Hicks, Louisville, Ky., assignor to Celanese Coatings Company, New York, N.Y., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 364,274, May 1, 1964. This application Apr. 21, 1966, Ser. No. 544,083

The portion of the term of the patent subsequent to Oct. 3, 1978, has been disclaimed

8 Claims. (Cl. 260—47)

A copolymer of an unsaturated aliphatic acid having only one carboxy group, at least one different ethylenically

unsaturated monomer and a beta-hydroxyalkyl ester of an unsaturated aliphatic acid having only one carboxyl group, said copolymer being useful in coating compositions.

3,375,228

HOT CAPPING OF POLYPHENYLENE ETHERS

Klaus E. Holoch and Bernadus J. Van Sorge, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 425,330, Jan. 13, 1965. This application May 10, 1967, Ser. No. 637,325

25 Claims. (Cl. 260—47)

A polyphenylene ether stabilized by a process involving heat treatment of the polymer to generate incipient, reactive, hydroxyl groups on the polymer chain followed by reaction of generated hydroxyl groups with a material capable of reacting therewith to form substituents on the polymer chain inert to oxygen attack at elevated temperatures.

3,375,229

LIGHT-SENSITIVE POLYMERS HAVING A LINEAR CHAIN CONTAINING THE STYRYL KETONE GROUP

Douglas G. Borden, Cornelius C. Unruh, and Stewart H. Merrill, Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

No Drawing. Original application July 21, 1959, Ser. No. 828,455. Divided and this application July 22, 1964, Ser. No. 422,476

6 Claims. (Cl. 260—50)

Linear polymers containing photosensitive styryl ketone group in the polymeric chain and which are useful in photographic processes involving photosensitive polymers, e.g., for lithographic plates, are aldehyde-ketone condensation polymers in which a dialdehyde having an aldehyde group attached to a benzene ring is condensed with a reactive methyl or methylene group attached to carbonyl in a ketone having two such reactive groups. Example is condensation polymer of 1,3-di-(o-formylphenoxy)-propane and acetone.

3,375,230

HIGH NITROGEN POLYMERS PREPARED BY REACTING ALDEHYDES WITH AMINOGUANIDINES, TETRAZOLES, OR TRIAZOLES

Phyllis D. Oja, Walnut Creek, and Earl Thomas Niles, Danville, Calif., assignors to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Filed Jan. 24, 1962, Ser. No. 169,178

7 Claims. (Cl. 260—67.6)

1. A nitrogen containing organic polymer having a nitrogen:carbon atom ratio of from greater than 1 to about 4.5 which comprises repetitive units of from about 1 to 4 molar equivalents of

(a) a member selected from the group consisting of monoaminoguanidine, diaminoguanidine, triaminoguanidine, diaminotetrazole, 4-amino-3,5-dihydrazino-1,2,4(4H)-triazole, dihydrazinotetrazine, mixtures thereof and the acid addition salts thereof

condensed with about 1 molar equivalent of

(b) an aldehyde based compound selected from the group consisting of formaldehyde, glyoxal, paraformaldehyde, formaldehyde-glyoxal mixtures, acetals of formaldehyde, glyoxal, paraformaldehyde and formaldehyde-glyoxal mixtures and oximes of formaldehyde, glyoxal, paraformaldehyde and formaldehyde-glyoxal mixtures.

3,375,231

COPOLYMER OF ETHYLENEIMINES AND LACTONES AND PROCESS OF PREPARING SAME

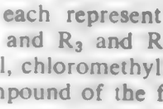
Kenichi Fukui, Sachio Yuasa, Tsutomu Kagiya, and Takeo Shimizu, Kyoto, and Takezo Sano, Niihama-shi, Japan, assignors to Sumitomo Chemical Company, Ltd., Osaka, Japan, a corporation of Japan

No Drawing. Filed Dec. 23, 1963, Ser. No. 332,840

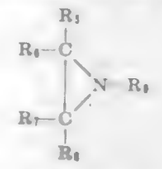
Claims priority, application Japan, Dec. 28, 1962, 37/59,678

6 Claims. (Cl. 260—78.3)

1. A copolymer produced by polymerization at a temperature of −20° C. to 200° C. of β-lactone of the formula:



wherein R_1 and R_2 each represent hydrogen atoms or lower alkyl radicals, and R_3 and R_4 each represent hydrogen atoms or alkyl, chloromethyl or aryl radicals with an ethyleneimine compound of the formula:



wherein R_5, R_6, R_7 and R_8 each represent hydrogen atoms or alkyl radicals, and R_9 represents a hydrogen atom, an alkyl or an acyl radical, in a mole ratio ranging from about 1:20 to about 20:1.

3,375,232

MODIFIED POLY(ARYLENE SULFIDE) RESINS

Roscoe A. Pike, Holden, and Randell E. Martin, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a corporation of Massachusetts

No Drawing. Filed Feb. 16, 1965, Ser. No. 433,167

3 Claims. (Cl. 260—79.1)

Thianthrene ring formation in the Macallum type formation of polyphenylene sulfide resins, where unsymmetric halogen tri-substituted aromatic compounds are employed, is avoided by the inclusion, in the reactants, of an alkyl substituted aromatic hydrocarbon such as toluene, xylene, cumene, mesitylene, methyl naphthalene, and ethyl methyl benzene.

3,375,233

NOVEL HIGHLY POLYMERIZED POLYAMINE SULFONE AND METHOD FOR PRODUCINC THE SAME

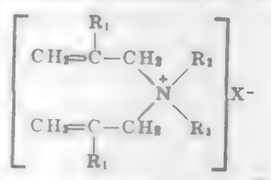
Susumu Harada and Masamichi Katayama, Fukushima-ken, Japan, assignors to Nitto Boseki Co., Ltd., Gonome, Fukushima-shi, Japan, a corporation of Japan

Filed May 21, 1965, Ser. No. 457,728

Claims priority, application Japan, May 25, 1964, 39/29,100

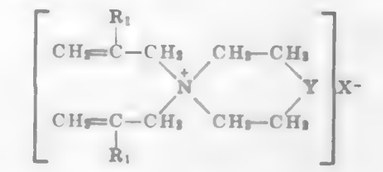
13 Claims. (Cl. 260—79.3)

1. A polyamine sulfone containing at least ⅓ mol of sulfone linkage per amine monomer unit in the molecular chain prepared by radical copolymerization of sulfur dioxide and an unsaturated amine compound having one of the following general Formulas I to IV:



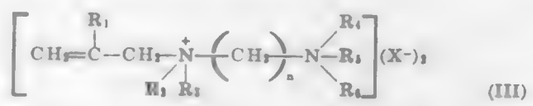
(I)

wherein R_1 is a hydrogen atom or a methyl radical; R_2 and R_3 are hydrogen atoms, allyl radicals, methallyl radicals, unbranched or branched alkyl radicals having 1 to 18 carbon atoms, phenyl radicals, benzyl radicals, cyclohexyl radicals, phenethyl radicals, β-hydroxyethyl radicals, β-sulphoethyl radicals, β-carboxyethyl radicals, or carboxymethyl radicals; and X is Cl, Br, I, HSO_4, HSO_3, HCOO or CH_3COO,



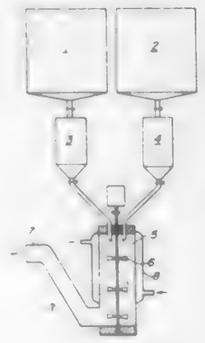
(II)

wherein R_1 and X are as defined above, and Y is an oxygen atom or methylene radical (—CH_2—),

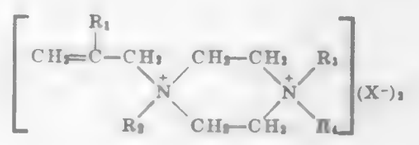


(III)

wherein R_1 is as defined above; R_2, R_3, R_4, R_5 and R_6 are hydrogen atoms, allyl radicals, or methallyl radicals,



at least one of the R_2 to R_6 being always an allyl radical or methallyl radical; X is Cl, Br or I and n is from 2 to 6,



(IV)

wherein R_1 is a hydrogen atom or a methyl radical, R_2, R_3 and R_4 are hydrogen atoms, allyl radicals or methallyl radicals, at least one of the R_2, R_3 and R_4 being an allyl radical or a methallyl radical and X is Cl, Br or I, said polymer being generally a colorless to white amorphous and brittle high molecular weight solid resistant to discoloration upon exposure to air.

3,375,234

RUBBER CURING SYSTEMS

Samuel Gelfand, Niagara Falls, N.Y., assignor to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

No Drawing. Filed Feb. 26, 1964, Ser. No. 347,359

17 Claims. (Cl. 260—79.5)

1. A composition which can be vulcanized comprising decachlorobutane in combination with sulfur and an elastomeric hydrocarbon polymer.

3,375,235

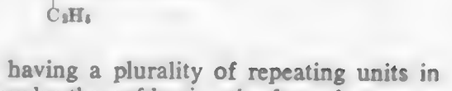
ALUMINUM HYDROCARBON POLYMERS

Gaetano F. D'Alelio, South Bend, Ind., assignor, by mesne assignments, to E. I. du Pont de Nemours and Company, a corporation of Delaware

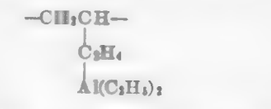
No Drawing. Continuation of application Ser. No. 744,340, June 25, 1958, Ser. No. 761,485, Sept. 17, 1958, and Ser. No. 762,226, Sept. 22, 1958. This application June 5, 1961, Ser. No. 135,089

3 Claims. (Cl. 260—80)

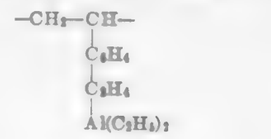
1. A polymer having a plurality of repeating units in the polymer molecules thereof having the formula



2. A polymer having a plurality of repeating units in the polymer molecules thereof having the formula



3. A polymer having a plurality of repeating units in the polymer molecules thereof having the formula



3,375,236

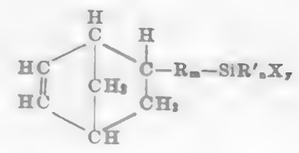
MOISTURE CURABLE BICYCLOHEPTENYL HALOSILANE COPOLYMERS

John F. Van de Castle, Westfield, Francis P. Baldwin, Summit, and Erving Arundale, Westfield, N.J., assignors to Esso Research and Engineering Company, a corporation of Delaware

No Drawing. Filed Nov. 5, 1964, Ser. No. 409,308

10 Claims. (Cl. 260—80.71)

1. A moisture curable copolymer of at least one C_2–C_{10} alpha olefin with a halosilane of the formula:



where R is a C_1–C_6 hydrocarbon organic radical; R′ is selected from the class consisting of hydrogen and C_1–C_6 hydrocarbon organic radicals; X is a halogen; m is a cardinal number between 0 and 6; n is a cardinal number between 0 and 2; y is a whole number between 1 and 3; and $n+y$ equals 3.

3,375,237

ACRYLONITRILE POLYMERS

Manuel M. Baizer, St. Louis, Mo., assignor to Monsanto Company, St. Louis, Mo., a corporation of Delaware

No Drawing. Original application Feb. 25, 1963, Ser. No. 260,853, now Patent No. 3,245,889. Divided and this application Dec. 30, 1964, Ser. No. 422,431

4 Claims. (Cl. 260—88.7)

Low molecular weight polymers of acrylonitrile formed by electrolysis of acrylonitrile under proton poor condi-

tions with the initial polymer unit having an adiponitrile structure with addition of other acrylonitrile molecules thereto.

3,375,238

PROCESS FOR SUSPENSION POLYMERIZATION OF VINYL CHLORIDE

Hans Bauer and Joseph Heckmaier, Burghausen, Upper Bavaria, Germany, assignors to Wacker-Chemie G.m.b.H., Munich, Germany, a firm of Germany

No Drawing. Filed Apr. 22, 1964, Ser. No. 361,863

Claims priority, application Germany, May 17, 1963, W 34,512

4 Claims. (Cl. 260—92.8)

This invention relates to a process for the polymerization of a polymerizate containing at least 80% polyvinyl chloride which comprises the steps of (1) mixing monomers selected from the group consisting of vinyl chloride and mixtures of vinyl chloride with up to 20% of olefinically unsaturated compounds copolymerizable with vinyl chloride, with water in the presence of a monomer-soluble polymerization catalyst and a mixed suspension stabilizer consisting of from 1% to 99% of a water-soluble methyl cellulose and from 99% to 1% of a water-soluble hydroxyethyl cellulose, (2) heating said mixture to a temperature between 0° C. and 160° C. for a time sufficient to effect polymerization while under continuous agitation, and (3) recovering said polymerizate. The so-prepared polymerizate has a narrow range of particle size distribution and is easier to pre-gel.

3,375,239

POLYMERIZATION OF 1,3-BUTADIENE USING AN ORGANOMETAL AS FIRST COMPONENT, A SECOND COMPONENT COMPRISED OF TITANIUM AND IODINE WITH A GROUP IV-B METAL HALIDE CATALYST ADJUVANT

William J. Trepka and Carl A. Uraneck, Bartlesville, Okla., assignors to Phillips Petroleum Company, a corporation of Delaware

No Drawing. Filed Dec. 18, 1964, Ser. No. 419,554

6 Claims. (Cl. 260—94.3)

High cis-polybutadiene is made by contacting 1,3-butadiene with the catalyst which forms on mixing as a first component an organometal compound and a second component containing titanium and iodine with a Group IV–II metal halide catalyst adjuvant.

3,375,240

METAL-CONTAINING DYESTUFFS

Fabio Beffa, Basel, Paul Lienhard, Riehen, and Eginhard Steiner, Basel, Switzerland, assignors to J. R. Geigy A.G., Basel, Switzerland

No Drawing. Filed Oct. 5, 1964, Ser. No. 401,664

Claims priority, application Switzerland, Oct. 11, 1963, 12,538/63

9 Claims. (Cl. 260—145)

Metal complex dyestuffs of good dyeing properties consisting essentially of a mixture of (a) a bicyclically metallized dyestuff moiety and (b) a bicyclically metallized formazane moiety, the mixture being complexed with Co or Cr as the metal, and molar ratio of (a) to (b) ranging from 2:1 to 1:2. Moiety (a) is the residue of a monoazo dye, of a disazo dye or of an azomethine dye.

3,375,241

FIBER REACTIVE DYESTUFFS

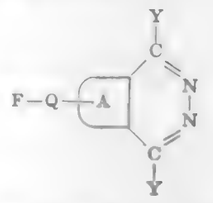
Edgar Siegel, Leverkusen, and Klaus Sasse, Cologne-Stammheim, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany

No Drawing. Filed Feb. 13, 1962, Ser. No. 172,857

Claims priority, application Germany, Feb. 27, 1961, F 33,299

12 Claims. (Cl. 260—154)

1. A dyestuff of the formula:



wherein F is a water-soluble metal-free monoazo dyestuff; A is a six-membered carbocyclic ring having three conjugated double bonds; Q stands for member selected from the group consisting of —NHOC— and —NHO_2S—; and Y is a halogen atom selected from the group consisting of Cl and Br.

3,375,242

CONVERSION OF NARINGIN TO NEOHESPERIDIN AND NEOHESPERIDIN DIHYDROCHALCONE

Robert M. Horowitz, Pasadena, and Bruno Gentili, Glendale, Calif., assignors to the United States of America as represented by the Secretary of Agriculture

No Drawing. Filed Dec. 9, 1966, Ser. No. 600,067

4 Claims. (Cl. 260—210)

Naringin is reacted with isovanillin to produce neohesperidin chalcone. This chalcone may be cyclized to yield neohesperidin or it may be hydrogenated to yield neohesperidin dihydrochalcone, a compound which is intensely sweet and known to be useful for sweetening foods.

3,375,243

METHOD OF PRODUCING ALKYL GLUCOSIDE COMPOSITIONS

Charles S. Nevin and Robert G. Short, Decatur, Ill., assignors to A. E. Staley Manufacturing Company, Decatur, Ill., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 502,351, Oct. 22, 1965. This application Mar. 13, 1967, Ser. No. 622,476

13 Claims. (Cl. 260—210)

Preparation of alkyl glucoside compositions by the reaction of a saccharide with an alcohol in the presence of a water-soluble sulfonic acid catalyst.

3,375,244

PRODUCTION OF 5'-NUCLEOTIDES

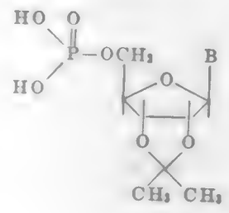
Shunji Ouchi, Tsuneo Sowa, Hiraku Yamada, and Kozo Tsunoda, Tokyo, Masakazu Kurihara, Warabi-shi, and Saburo Senoo, Tokyo, Japan, assignors to Asahi Kasei Kogyo Kabushiki Kaisha, Osaka, Japan, a corporation of Japan

No Drawing. Filed Dec. 14, 1964, Ser. No. 418,331

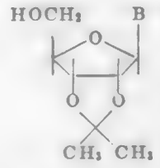
Claims priority, application Japan, Dec. 19, 1963, 38/68,101

6 Claims. (Cl. 260—211.5)

1. A process for the production of 5'-nucleotides having the general formula



and protected by 2',3'-O-isopropylidene group, said process comprising reacting a nucleoside having the general formula



and protected by 2',3'-O-isopropylidene group and phosphorous oxychloride in mixture with a small amount of a tertiary amine as a catalyst and an organic solvent selected from the group consisting of acetonitrile, nitromethane, dichloromethane and tetrahydrofuran, wherein B is selected from the group consisting of purines and pyrimidines which compose nucleic acid.

3,375,245

METHOD OF MAKING SODIUM CARBOXYMETHYL CELLULOSE

Robert J. Dearborn, Muncie, Ind., assignor to Warner Machine Products, Inc., Muncie, Ind., a corporation of Indiana

No Drawing. Filed Apr. 5, 1962, Ser. No. 185,218

1 Claim. (Cl. 260—231)

A method of making sodium carboxymethyl cellulose from regenerated cellulose in which comminuted regenerated cellulose is mixed with aqueous solutions of chloracetic acid and sodium hydroxide to form a reaction mixture. The water concentration of the reaction mixture is adjusted and said mixture is allowed to react until the ratio of the carboxymethyl groups substituted into the glucose molecules is in the range of from 0.45 to 0.85 to 1.

3,375,246

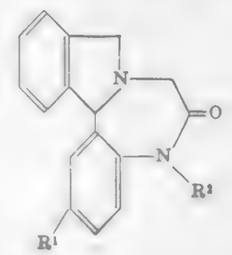
ISOINDOLINES

Goetz E. Hardtmann, Madison, and Hans Ott, Convent Station, N.J., assignors to Sandoz, Inc., Hanover, N.J.

No Drawing. Filed June 11, 1965, Ser. No. 463,378

20 Claims. (Cl. 260—239.3)

1. A pharmaceutically acceptable compound of the formula



wherein:

R^1 is a member selected from the group consisting of a hydrogen atom, chloro, fluoro and bromo; and

R^2 is a member selected from the group consisting of a hydrogen atom, lower alkyl, lower alkenyl having a saturated α-carbon atom, lower alkinyl having a saturated α-carbon atom and di(lower)alkylamino(lower)-alkyl having an alkylene bridge of at least two carbon atoms.

3,375,247

HETEROCYCLIC COMPOUNDS AND METHODS FOR THEIR PRODUCTION

Leonard Doub, Bloomfield Hills, and Uldis Krolls, Ann Arbor, Mich., assignors to Parke, Davis & Company, Detroit, Mich., a corporation of Michigan

No Drawing. Filed Aug. 2, 1965, Ser. No. 476,694

6 Claims. (Cl. 260—239.75)

N-sulfanilycytosine compounds, substituted in the 1-position by lower alkyl, lower alkoxyalkyl, lower alkenyl, or phenyl-substituted lower alkyl, and alkali metal salts thereof, useful as antibacterial agents, and their production by (a) hydrolysis of a corresponding N-(N-acylsulfanilyl)cytosine, and (b) reduction of a corresponding N-(p-nitrobenzenesulfanilyl)cytosine.

3,375,248

PHENOTHIAZINE CARBOXYLIC ACID DERIVATIVES

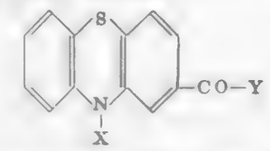
Jacques J. P. de Antoni, Gif-sur-Yvette, Essonne, France, assignor to Les Laboratoires Bruneau & Cie, Paris, France, a corporation of France

No Drawing. Continuation-in-part of application Ser. No. 509,218, Nov. 22, 1965. This application Feb. 17, 1967, Ser. No. 616,764

Claims priority, application France, Nov. 30, 1964, 996,857, Patent 3,883; Mar. 2, 1965, 7,626, Patent 138; Sept. 13, 1965, 31,196, Patent 1,459,075; Feb. 18, 1966, 50,231; Apr. 26, 1966, 59,107; May 16, 1966, 61,761; Dec. 2, 1966, 85,945

37 Claims. (Cl. 260—243)

A compound, having anti-inflammatory and analgesic utility, selected from the class consisting of (a) phenothiazine derivatives of the formula



where X represents an alkanoyl radical and Y represents a group selected from the class consisting of N-methyl piperazino, N-phenyl piperazino and groups of the formula —A—C_nH_{2n}—Am where A represents —NH— or —O—, n is an integral number from 2 to 5 and Am represents a group selected from the class consisting of dialkylamino in which each alkyl group contains 1 to 4 carbon atoms, and heterocyclic nitrogen groups, and (b) non toxic acid addition salts of said phenothiazine derivatives.

3,375,249

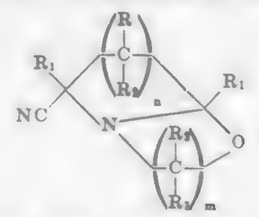
AZA-CYANO-OXABICYCLO ALKANES

Herbert E. Johnson, South Charleston, W. Va., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Filed Aug. 23, 1963, Ser. No. 304,240

21 Claims. (Cl. 260—244)

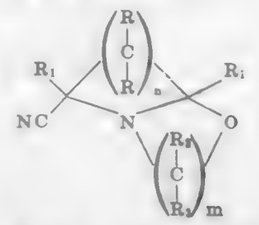
1. A 1-aza-2-cyano-oxabicyclo alkane of the formula:



wherein R, R_1, R_2, and R_3 are from the group consisting of hydrogen and a monovalent hydrocarbon group of from 1 to 25 carbon atoms; n is an integer of from 2 to 4, inclusive; and m is an integer of from 2 to 6, inclusive.

10. 1-aza-2-cyano-7-oxabicyclo[4.4.0]decane.

12. A process for the preparation of a 1-aza-2-cyano-oxabicyclo alkane of the formula:



wherein R, R_1, R_2, and R_3 are from the group consisting of hydrogen and a monovalent hydrocarbon group of

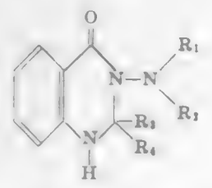
from 1 to 25 carbon atoms; *n* is an integer from 2 to 4, inclusive; and *m* is an integer from 2 to 6, inclusive, which comprises reacting a member selected from the group consisting of a dicyanohydrin, diketone and keto-aldehyde with a primary amino alcohol.

3,375,250
CERTAIN ALKYL AND ARYL SUBSTITUTED 3 - AMINO - 2,3 - DIHYDRO - 4(1H)QUINAZOLINONES

Frederick K. Kirchner, Bethlehem, and Andrew W. Zalay, Albany, N.Y., assignors to Sterling Drug Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Nov. 17, 1961, Ser. No. 153,227
12 Claims. (Cl. 260—256.4)

1. A compound of the formula



wherein R_1, R_2, R_3, and R_4 are lower-alkyl.

3,375,251
PHENAZINE DERIVATIVES

Gerald R. Aldridge, Elizabeth, N.J., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Oct. 12, 1965, Ser. No. 495,332
7 Claims. (Cl. 260—267)

Yellow pigments comprising 4,5,6,12,13,14-hexahydrodiisoquino-[5,4-ab,5',4'-hi]-phenazine-4,6,12,14 - tetrone and its derivatives wherein the imide groups are substituted with a lower alkyl, aryl, or a heterocyclic radical. Also included is a process for the preparation of these compounds which comprises the catalytic condensation-oxidation of a 3-amino derivative of naphthalic anhydride or imide.

3,375,252
PROCESS FOR THE PRODUCTION OF 2-METHYL-1,4-DIAZA-BICYCLO-(2,2,2)-OCTANE

Shiyunichi Yamada and Toshinori Kurano, Kanagawaken, Japan, assignors to Sankyo Chemical Industries Ltd., Tokyo, Japan, a corporation of Japan

No Drawing. Filed June 28, 1966, Ser. No. 561,030
Claims priority, application Japan, July 1, 1965, 40/38,952
2 Claims. (Cl. 260—268)

New and improved process for the preparation of 2-methyl-1,4-diaza-bicyclo-(2,2,2)-octane which comprises heating 2-methyl-1,4-di-beta-hydroxyethyl piperazine or 1,4-di-beta-hydroxypropyl piperazine in the presence of an alkali or alkaline earth metal salt of acetic acid.

3,375,253
AZONIA SALTS

Donald L. Fields and Jerry B. Miller, Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey

No Drawing. Filed May 20, 1964, Ser. No. 368,979
5 Claims. (Cl. 260—286)

Novel salts of [1-azonia-2-(1,3-dioxolan-2-yl)benzyl]-aromatic diesters and their preparation and novel diol, diester and dione azonia salts derived from said aromatic diesters and their preparation. 2-[1-azonia-2-(1,3-dioxolan-2-yl)benzyl]hydroquinone diacetate bromide is illustrative of the aromatic diester compounds. 5,6-dihydroxy-4a-azoniaanthracene bromide is illustrative of the latter azonia salts.

3,375,254
MANUFACTURE OF 1,2,3,4,6,7-HEXAHYDRO-2-OXO-11bH-BENZO(a)QUINOLIZINES

Harry Tacon Openshaw and Norman Whittaker, London, England, assignors to Burroughs Wellcome & Co. Inc., Tuckahoe, N.Y., a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 141,581, Sept. 29, 1961. This application Sept. 17, 1965, Ser. No. 488,258
11 Claims. (Cl. 260—289)

1,2,3,4,6,7 - hexahydro - 2 - oxo - 11bH - benzo(a) quinolizines, of value for their pharmacological activity and as intermediates in the synthesis of emetine, are prepared by reaction of 3,4 - dihydroisoquinolines in which the 6 and 7 positions are substituted by hydrogen, methoxy, ethoxy, or a methylenedioxy group as a free base with the cation of a Mannich base having the formula,

$$Z^1Z^2Z^3N^+.CH_2.CHR^3.CO.CH_3$$

in which Z^1 is hydrogen or lower alkyl, Z^2 and Z^3 are lower alkyl or a combination forming a morpholine, pyrrolidine, or piperidine ring, and R^3 is hydrogen or lower alkyl.

3,375,255
N-HYDROXYALKYLPIPERIDYL, PIPERIDYL ALKANES

Francis E. Cislak, Charles K. McGill, and George W. Campbell, Jr., Indianapolis, Ind., assignors to Reilly Tar & Chemical Corporation, Indianapolis, Ind., a corporation of Indiana

No Drawing. Filed Apr. 19, 1965, Ser. No. 449,284
4 Claims. (Cl. 260—294.7)

N-hydroxyalkylpiperidyl, piperidyl alkanes are prepared by reacting a chlorohydrin with a dipiperidylalkane, or by reacting a chlorohydrin with di-pyridylalkane and then hydrogenating the resulting quaternary pyridinium salt. Some of them are prepared by reacting an alkylene oxide with a dipiperidylalkane. The compounds are useful in the preparation of corrosion inhibiting compounds and in the polymer art.

3,375,256
4-SUBSTITUTED-4'-TERTIARY AMINOALKOXY BIPHENYLS

Frederick Louis Bach, Montvale, N.J., and John Claire Barclay, New York, and Elliott Cohen, Pearl River, N.Y., assignors to American Cyanamid Company, Stamford, Conn., a corporation of Maine

No Drawing. Continuation-in-part of application Ser. No. 427,094, Jan. 21, 1965. This application Nov. 18, 1966, Ser. No. 595,360
10 Claims. (Cl. 260—294.7)

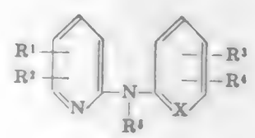
This disclosure describes compounds of the class of 4-substituted-4'-tertiary aminoalkoxy biphenyls useful as hypocholesteremic agents.

3,375,257
N-(ACYL AMINO SUBSTITUTED PYRIDYL)-N-(PHENYL OR PYRIDYL)AMINES

Kurt Thiele, Günter Steinmetz, and Walter von Bebenburg, Frankfurt am Main, Germany, assignors to Deutsche Gold- und Silber-Scheideanstalt vormals Roessler, Frankfurt am Main, Germany

No Drawing. Filed Aug. 23, 1965, Ser. No. 481,938
Claims priority, application Germany, Aug. 29, 1964, D 45,302, D 45,303
5 Claims. (Cl. 260—295)

Compounds of the formula



wherein X is selected from the group consisting of nitrogen and —CH—, R^1 is an amino acyl group R^6NH, wherein R^6 is an acyl group derived from an acid selected from the group consisting of carbonic acid, mono lower alkyl esters of carbonic acid, lower alkanoic acids, benzoic acid, chloro substituted benzoic acids and hydroxy substituted benzoic acids, R^2 is, for instance, selected from the group consisting of hydrogen, halogen, amino and acyl amino as defined for R^1, R^3 and R^4 are, for instance, selected from the group consisting of hydrogen, halogen, trifluoromethyl, alkyl, alkoxy, carboxy and amino and R^5 is selected from the group consisting of hydrogen and acyl as defined for R^6. The compounds of this invention have valuable pharmaceutical properties because of their high antiphlogistic action indicating their usefulness as anti-inflammatory agents.

3,375,258
PREPARATION OF 2-BENZOYLMETHYL-BENZOXAZOLES

Emil B. Rauch, Port Dickinson, and John A. Welsh, Binghamton, N.Y., assignors to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed Jan. 18, 1965, Ser. No. 426,387
10 Claims. (Cl. 260—307)

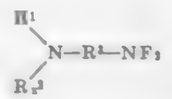
1. The process of preparing 2-phenacyloxazoles which comprises reacting an alkyl ester of an aromatic carboxylic acid with a 2-methylaryleneoxazole in the presence of a catalytic amount of an alkali metal hydride catalyst.

3,375,259
DIFLUORAMINO COMPOUNDS

James Andrew Gibson, Prestwick, and James Brown Parker and James Grigor, Kilwinning, Scotland, assignors to Imperial Chemical Industries Limited, London, England, a corporation of Great Britain

No Drawing. Filed Apr. 14, 1964, Ser. No. 359,796
Claims priority, application Great Britain, Apr. 17, 1963, 15,211/63
19 Claims. (Cl. 260—309.7)

1. Compounds of the general formula



where:

R^1 is selected from the group consisting of monovalent and divalent atoms and groups having an electron attracting atom or group adjacent the nitrogen atom,

R^2 is selected from the group consisting of R^1, hydrogen, hydroxyl, alkyl, aryl, alkoxy and the atoms necessary to form with R^1 a cyclic ring containing nitrogen and carbon atoms in the ring,

x is 0 or 1 as R^1 is an integer selected from the group consisting of 0 and 1 and is 0 when R^1 is divalent and is 1 when R^1 is monovalent,

R^3 is selected from the group consisting of an alkylene group, a difluoraminoalkylene group and a nitro-alkylene group and

R^1, R^2 and R^3 are such that the ratio of carbon atoms to difluoramino groups is not more than 6:1.

16. A process for the preparation of a difluoramine compound as claimed in claim 1 wherein a compound containing an NH group and having the general formula $R^1NHR_x^2$ is reacted with a difluoramino alcohol having the general formula $HO—R^3NF_2$ in the presence of a substance selected from the group consisting of strongly water-absorbent substances and strongly water-reactive substances, R^1, R^2, R^3 and *x* having the meanings given in claim 1.

3,375,260
19-NOR-9β,10α-STEROIDS OF THE PREGNANE SERIES

Albert Bowers, Atherton, Calif., Pierre Crabbé, Mexico City, Mexico, and John Edwards, Los Altos, Calif., assignors to Syntex Corporation, Panama, Panama, a corporation of Panama

No Drawing. Continuation-in-part of application Ser. No. 210,211, July 16, 1962. This application Mar. 8, 1965, Ser. No. 438,069
Claims priority, application Mexico, Dec. 4, 1961, 65,269
10 Claims. (Cl. 260—397.3)

2. 6α,16α-dimethyl-19nor-9β,10α-Δ^4-pregnene-3,20-dione.

3,375,261
RING A UNSATURATED-20-OXO-11,17-BIS-OXYGENATED 16-METHYL-STEROIDS OF THE PREGNANE SERIES

Glen E. Arth, Cranford, David Johnston, Warren Township, Somerset County, and Lewis H. Sarett, Princeton, N.J., assignors to Merck & Co., Inc., Rahway, N.J., a corporation of New Jersey

No Drawing. Continuation-in-part of application Ser. No. 642,655, Feb. 27, 1957. This application July 8, 1966, Ser. No. 563,658
27 Claims. (Cl. 260—397.45)

1. The 17-oxygenated-pregnane having Δ^4 unsaturation in ring A, a keto group at the 20-position, a member selected from the group consisting of nitrogen and oxygen at the 3-position, a member selected from the group consisting of hydrogen and halogen at the 9α-position, a member selected from the group consisting of keto and β-hydroxy at the 11-position, and characterized by the presence of a methyl substituent attached to the C–16 carbon atom.

3,375,262
MONOACYL DIOL HYDROGEN DICARBOXYLATES

James Bruce Martin, Hamilton, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio

No Drawing. Filed Oct. 29, 1963, Ser. No. 319,643
4 Claims. (Cl. 260—404.8)

1. Stearoyl propylene glycol hydrogen succinate.

3,375,263
WERNER COMPLEXES OF CHROMIUM AND OMEGA (ETHENYL CARBOXY) ALIPHATIC CARBOXYLIC ACIDS

John W. Trebilcock, Holiday Hills, Wilmington, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Feb. 13, 1964, Ser. No. 344,559
9 Claims. (Cl. 260—414)

Werner complexes of trivalent nuclear chromium atoms coordinated with omega (ethenyl carboxy) aliphatic carboxylic acids such as methacryloxyundecanoic acid, are prepared by bringing together a water-soluble chromium salt such as basic chromic chloride, an alcohol such as isopropanol, and an omega (ethenyl carboxy) aliphatic carboxylic acid and heating the mixture at reflux for about 15 minutes. The Werner complexes are useful as glass-treating agents in the preparation of glass fiber-plastic laminates.

3,375,264

3-ALKOXY OR ALKYLTHIO-4,4'-DIISOCYANATO DIPHENYLMETHANES

Adnan A. R. Sayigh, North Haven, James N. Tilley, Cheshire, and Henri Ulrich, Northford, Conn., assignors to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed Sept. 14, 1964, Ser. No. 396,409

3 Claims. (Cl. 260—453)

4,4'-diisocyanato diphenylmethanes, substituted in the 3-position by lower-alkoxy or lower-alkylthio, are provided. The isocyanato group in the same ring as the 3-substituent is markedly less reactive than that in the unsubstituted ring thus permitting selective reaction of said isocyanate groups. The compounds are useful as intermediates in the preparation of cellular and non-cellular polyurethanes.

3,375,265

PRODUCTION OF TRIALKOXYBOROXINE

Lloyd C. Fetterly and George W. Conklin, Oakland, Kenneth F. Koetitz, Pleasant Hill, Friedrich G. Helfferich, Berkeley, Peter W. Gilderson, Oakland, and Stanley F. Newman, San Francisco, Calif., assignors to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed Sept. 7, 1965, Ser. No. 485,564

2 Claims. (Cl. 260—462)

1. The process of producing trialkoxyboroxine containing alkoxy radicals of at least 4 carbon atoms by partially hydrolyzing trialkyl ortho borate ester, wherein the alkyl is of at least 4 carbon atoms, in liquid phase at about 130 to about 225° C. in the presence of water vapor at a partial pressure no gerater than 250 mm. Hg.

3,375,266

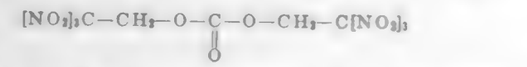
BIS-TRINITROETHYL CARBONATE AND PROCESS OF PREPARATION

Marion E. Hill, Kensington, Md., assignor to the United States of America as represented by the Secretary of the Navy

No Drawing. Continuation-in-part of application Ser. No. 496,632, Mar. 24, 1955. This application Oct. 17, 1956, Ser. No. 616,579

6 Claims. (Cl. 260—463)

1. The explosive chemical compound having the formula



3. The process for the preparation of bis(2,2,2-trinitroethyl) carbonate comprising reacting phosgene with 2,2,2-trinitroethanol in the presence of a metal halide catalyst selected from a group consisting of aluminum chloride and aluminum bromide.

3,375,267

AMINOTETRAFLUOROBENZONITRILE

Edwin Dorfman and Russell L. K. Carr, Grand Island, and Claude Thomas Bean, Jr., Niagara Falls, N.Y., assignors to Hooker Chemical Corporation, Niagara Falls, N.Y., a corporation of New York

No Drawing. Filed Jan. 21, 1965, Ser. No. 427,165

3 Claims. (Cl. 260—465)

This invention relates to aminotetrafluorobenzonitrile, a process for preparing this compound by the reaction of pentafluorobenzonitrile and ammonia, and a herbicidal method employing the invented compound.

3,375,268

PROCESS FOR PRODUCING CYANOACETIC ACID

George Kesslin, Teaneck, N.J., and Stephen L. Bearman and Mark M. Lewis, New City, N.Y., assignors to Kay-Fries Chemicals, Inc., West Haverstraw, N.Y., a corporation of New York

Filed Aug. 27, 1964, Ser. No. 392,394

6 Claims. (Cl. 260—465.4)

1. A process for producing sodium cyanoacetate which comprises mixing in an aqueous reaction medium the reactants sodium chloroacetate and approximately equivalent amounts of hydrogen cyanide and an alkali metal hydroxide at a temperature between about 25–40° C. and continuing the reaction in said aqueous medium at a temperature between about 50–120° C. until the sodium cyanoacetate is formed.

3,375,269

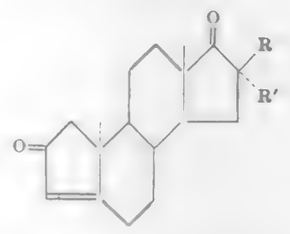
16-OXYGENATED-Δ^3-A-NORANDROSTENE-2,17-DIONES

Pacifico A. Principe, South River, and Seymour D. Levine, Princeton, N.J., assignors, by mesne assignments, to E. R. Squibb & Sons, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Aug. 30, 1965, Ser. No. 483,812

5 Claims. (Cl. 260—488)

1. A compound of the formula



wherein R is hydrogen; R' is selected from the group consisting of hydroxy and the acyloxy radical of a hydrocarbon carboxylic acid of less than twelve carbon atoms; and together R and R' is oxo.

3,375,270

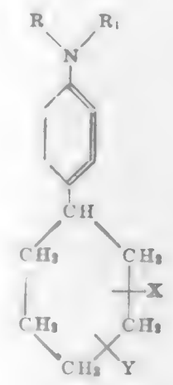
4-CYCLOHEXYL AND 4-(ALKYLCYCLOHEXYL) BICYCLO[2.2.2]OCTANE-1-AMINES

Jack A. Snyder, Claymont, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

No Drawing. Filed Sept. 24, 1965, Ser. No. 490,087

14 Claims. (Cl. 260—501.11)

1. A compound selected from the group consisting of those of the formula,



where

R, R_1, X and Y are selected from the group consisting of hydrogen, methyl and ethyl; and non-toxic salts of the basic compounds of said formula.

3,375,271

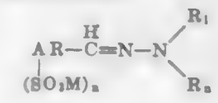
SUN-SCREENING COMPOUNDS

Sigmund C. Catino, Castleton, and Albert F. Strobel, Delmar, N.Y., assignors to General Aniline & Film Corporation, New York, N.Y., a corporation of Delaware

No Drawing. Filed July 8, 1964, Ser. No. 381,239

6 Claims. (Cl. 260—510)

Compounds of the formula



wherein AR represents a benzene ring which may be substituted, M is hydrogen, a Group I metal, ammonium or amine, *n* is an integer from 1 to 3, R_1 and R_2 are independently hydrogen, alkyl, alkenyl, cycloalkyl, or cycloalkenyl, and at least one of R_1 and R_2 is not hydrogen.

3,375,272

PRODUCTION OF DIETHYLADIPIC ACID

Walter K. Henle, Orinda, Calif., assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed May 29, 1964, Ser. No. 371,185

2 Claims. (Cl. 260—537)

Reaction of dialkali metal 1,3-alkadiene linear dimer, e.g., disodiooctadiene, with an essentially stoichiometric amount of a non-variable valence polyvalent metal halide MR_n, where M is magnesium or aluminum, *n* is the valence 2 to 3 of M, and at least one R is halogen and any non-halogen R is hydrocarbyl, e.g. magnesium bromide, dissolved in an inert solvent, e.g., ether, produces the corresponding 3,6-metalooctadiene, and carbonation of the product produces the metal salt of a 2,2'-dialkenyl-substituted adipic acid, from which upon hydrogenation followed by hydrolysis is obtained 2,2'-dialkyladipic acid.

3,375,273

HYDROXYLAMINE DERIVATIVES AND PROCESS FOR MAKING THEM

David John Drain, Welwyn Garden City, John Gordon Bernard Howes, Bengeo, Hertford, and Haydn Windsor Richard Williams, Digswell, Welwyn, England, assignors to T. J. Smith & Nephew Limited, Kingston-upon-Hull, England, a British company

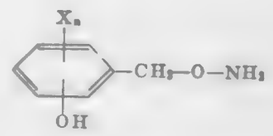
No Drawing. Filed Apr. 9, 1963, Ser. No. 271,596

Claims priority, application Great Britain, Apr. 10, 1962, 13,771/62

The portion of the term of the patent subsequent to Dec. 28, 1982, has been disclaimed

11 Claims. (Cl. 260—538)

1. A hydroxylamine derivative of general formula



wherein the hydroxyl group shown is in a position selected from the group consisting of the 2- and 4-positions,

X represents a member selected from the group consisting of hydrogen and halogen atoms, and

n represents a positive integer from 1 to 2.

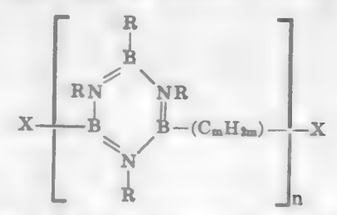
3,375,274

ALKYLENE BORAZINE POLYMERS

John P. Faust, Hamden, and Andrew J. Klanica, Cheshire, Conn., assignors to Olin Mathieson Chemical Corporation

No Drawing. Filed Nov. 20, 1964, Ser. No. 412,858

1. An alkylene borazine polymer having the formula:



where X is a halogen selected from the group consisting of chlorine, bromine and iodine, R is alkyl of 1 to 5 carbons, *m* is an integer from 1 to 12 and *n* is an integer from 3 to 16.

3,375,275

PREPARATION OF 5,8-DIHYDRO-5,8-METHANO-1,4-NAPHTHALENEDISULFONAMIDES

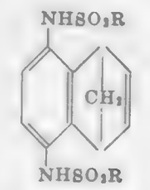
Joseph E. Dunbar, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a corporation of Delaware

No Drawing. Continuation-in-part of application Ser. No. 366,150, May 8, 1964. This application June 26, 1964, Ser. No. 378,453

The portion of the term of the patent subsequent to Jan. 30, 1979, has been disclaimed and dedicated to the Public

1 Claim. (Cl. 260—556)

1. The method of preparing a compound corresponding to the formula



which comprises reacting cyclopentadiene with a p-quinonesulfonimide having the formula

wherein in the formulae R represents an alkyl group containing up to and including 4 carbon atoms; said reaction being carried out in the presence of at least a catalytic amount of tertiary amine.

3,375,276

METHOD FOR PREPARING TETRACYCLINE PRODUCTS

Saul Lewis Neidleman, Highland Park, Roland Walter Kinney, Trenton, and Frank Lee Weisenborn, Somerset, N.J., assignors, by mesne assignments, to E. R. Squibb & Sons, Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed June 24, 1963, Ser. No. 290,173

2 Claims. (Cl. 260—559)

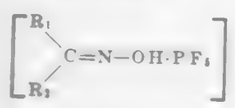
1. A process for preparing tetracycline derivatives of a compound selected from the group consisting of 7-chlortetracycline and 7-chloro-6-demethyltetracycline which comprises subjecting a compound selected from the group consisting of 7-chlortetracycline and 7-chloro-6-demethyltetracycline under aerobic conditions to the action of peroxidase in the presence of dihydroxy-fumaric acid.

3,375,277
COMPLEXES OF PHOSPHORUS PENTAFLUORIDE-OXIMES

Mervin E. Brokke, Richmond, Calif., George E. Lukes, deceased, late of El Cerrito, Calif., by John Hazzard, administrator, Kentfield, Calif., and Duane R. Arnekley, Sunnyvale, Calif., assignors to Stauffer Chemical Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed Apr. 20, 1965, Ser. No. 450,265
5 Claims. (Cl. 260—566)

1. A compound of the formula



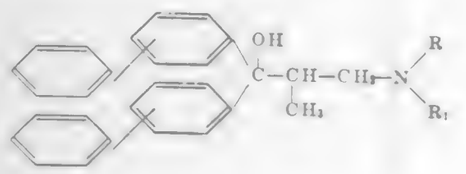
wherein R_1 is selected from the group consisting of lower alkyl radicals containing from 1 to 6 carbon atoms, inclusive, and phenyl, and R_2 is selected from the group consisting of hydrogen, lower alkyl radicals containing from 1 to 6 carbon atoms, inclusive, and phenyl, and R_1 and R_2 jointly are a divalent alkylene radical containing up to 5 carbon atoms.

3,375,278
1,1-BIS(BIPHENYLYL)-2-METHYL-3-TERTIARY AMINOPROPANOLS AND SALTS THEREOF

Robert B. Moffett, Kalamazoo, Mich., assignor to The Upjohn Company, Kalamazoo, Mich., a corporation of Delaware

No Drawing. Filed June 6, 1966, Ser. No. 555,253
2 Claims. (Cl. 260—570)

1. A compound of the formula



wherein R and R_1 are alkyl having from 1 to 4 carbon atoms, inclusive, and the acid addition salts thereof.

3,375,279
DIALKYNYL AMINES

James F. Vitcha, New Providence, and George L. Moore, South Plainfield, N.J., assignors to Air Reduction Company, Incorporated, New York, N.Y., a corporation of New York

No Drawing. Original application Feb. 20, 1961, Ser. No. 90,209, now Patent No. 3,268,524, dated Aug. 23, 1966. Divided and this application Mar. 10, 1965, Ser. No. 438,716
12 Claims. (Cl. 260—577)

Dialkynyl amines are prepared by a process which comprises forming an anhydrous mixture of paraformaldehyde, an inert hydrocarbon solvent, and a catalyst selected from the group consisting of catalytically-active salts and acetylides of the heavy metals of subgroups I–B and II–B of the Periodic Table of Elements, adding an atmosphere of acetylene on said mixture, and gradually adding to said mixture a primary hydrocarbyl amine having up to 20 carbon atoms, said amine being selected from the group consisting of aliphatic amines and monocyclic aromatic amines, and mixtures of the foregoing, said amine being added to said mixture at a uniform rate and at a temperature between about 40° C. and 90° C. and a pressure between about 2 and 40 atmospheres, the rate of addition of said amine being such that substantially no excess of unreacted amine is present in said reaction mixture.

3,375,280
17-SUBSTITUTED STEROID DERIVATIVES

Kenneth G. Holden, Stratford, N.J., assignor to Smith Kline & French Laboratories, Philadelphia, Pa., a corporation of Pennsylvania

No Drawing. Filed Aug. 13, 1964, Ser. No. 389,470
5 Claims. (Cl. 260—586)

Compounds of the generic class of 17-loweralkoxymethyl-B-nortestosterone and intermediates for preparing these compounds having antiandrogenic activity. The compounds are prepared by reacting 17,20-epoxy steroids with an alkali metal lower alkoxide.

3,375,281
PROCESS FOR THE PREPARATION OF STEARONE

Edward S. Rothman, Philadelphia, Pa., assignor to the United States of America as represented by the Secretary of Agriculture

No Drawing. Filed May 13, 1966, Ser. No. 549,810
2 Claims. (Cl. 260—595)

1. A process for the preparation of stearone consisting of heating isopropenyl stearate at a temperature of at least 180° C. in the presence of at least a catalytic amount of a proton-providing acid catalyst.

3,375,282
PROCESS OF PREPARING NITROSOCARBORANE MONOMERS

Joel M. Kauffman, Lexington, Mass., and Joseph Green, Dover, and Marvin M. Fein, Westfield, N.J., assignors, by mesne assignments, to the United States of America as represented by the United States Atomic Energy Commission

No Drawing. Filed Aug. 5, 1965, Ser. No. 477,624
6 Claims. (Cl. 260—606.5)

1. A process for preparing nitrosocarborane products selected from the group consisting of 1-loweralkyl-2-nitrosocarboranes and 1-nitrosocarborane comprising the steps of contacting in the presence of ether containing inert solvent, a carboranyllithium selected from the group consisting of carboranyllithium and loweralkylcarboranyllithium and nitrosyl chloride until substantial quantities of nitrosocarborane products are formed, and isolating the products contained therein.

3,375,283
PREPARATION OF METHOXY PHENOLS FROM SPENT PULPING LIQUORS

David W. Goheen and John B. Martin, Camas, Wash., assignors to Crown Zellerbach Corporation, San Francisco, Calif., a corporation of Nevada

Continuation-in-part of application Ser. No. 475,834, July 29, 1965. This application Sept. 26, 1966, Ser. No. 584,632
14 Claims. (Cl. 260—613)

1. The process of preparing a methoxy phenol from waste pulping liquor comprising:

evaporating said waste liquor substantially to dryness;

subjecting the resulting solids to tumbling:

during said tumbling, subjecting said solids to a rapid pyrolysis at a temperature of from about 350° C. to 500° C. to cause the formation of a pyrolyzate containing said methoxy phenol;

substantially immediately and continuously removing said pyrolyzate from said pyrolysis zone as it is formed;

and recovering said methoxy phenol from said pyrolyzate.

3,375,284
PROCESS FOR PURIFYING AND DECOLORIZING ALKYLPHENOL-ETHYLENE OXIDE ADDUCTS

Harry T. Zika, South Charleston, and Louis F. Theiling, Jr., Charleston, W. Va., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 104,848, Apr. 24, 1961. This application Aug. 9, 1967, Ser. No. 659,306
1 Claim. (Cl. 260—613)

There is disclosed a process for purifying and decolorizing alkylphenol-ethylene oxide adducts which comprises contacting said adducts with an alkali metal borohydride.

3,375,285
CATALYTIC HYDROGENATION OF POLYCYCLIC AROMATIC QUINONES

Perry A. Argabright, Littleton, Colo., assignor to Marathon Oil Company, Findlay, Ohio, a corporation of Ohio

No Drawing. Filed Dec. 12, 1963, Ser. No. 330,000
14 Claims. (Cl. 260—618)

1. The process comprising reacting with hydrogen a compound having at least one terminal 1,4-quinoid ring fused to an aromatic ring in the presence of catalytic amounts of copper chromite and at temperatures and hydrogen pressures effective to reduce at least one said quinoid ring to produce a nonketo compound selected from the group consisting of mono- and polyhydric alcohols, wherein the temperature is from about 125° C. to about 200° C., the hydrogen pressure is in excess of about 500 p.s.i.g. and the reaction is carried out for a period of time ranging from about 1 to about 8 hours.

3,375,286
FREPARATION OF 1,1-DICHLOROCYCLOPROPANE COMPOUNDS

Howard J. Platte, Groves, Tex., assignor to Texaco Inc., New York, N.Y., a corporation of Delaware

No Drawing. Filed Oct. 4, 1965, Ser. No. 492,936
4 Claims. (Cl. 260—650)

A method of producing 1,1-dichlorocyclopropane hydrocarbon compounds comprising contacting in the presence of benzyl alcohol an olefinic hydrocarbon at a temperature between about 60–110° C. with an alkali metal hydroxide and chloroform utilizing a mole ratio of olefin to chloroform to alkali metal hydroxide of between about 1:2:1 and 10:10:1 wherein the water content during said contacting is maintained at less than 0.1 wt. percent. The products of the method are useful as hardening agents for elastomers, fire retardants, fungicides and insecticides.

3,375,287
PROCESS FOR ISOMERIZING ETHYLENICALLY UNSATURATED COMPOUND POSSESSING CYCLOALIPHATIC NUCLEUS

Samuel W. Tinsley, Edward A. Rick, and James E. McKeon, Charleston, W. Va., assignors to Union Carbide Corporation, a corporation of New York

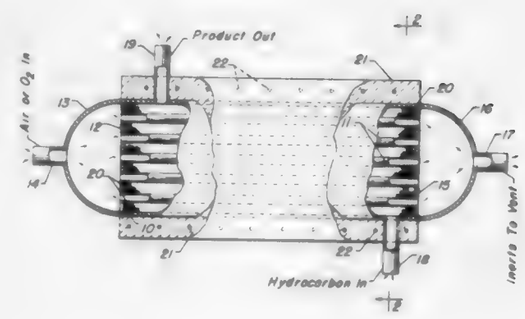
No Drawing. Continuation of application Ser. No. 396,416, Sept. 14, 1964. This application July 21, 1967, Ser. No. 655,239
23 Claims. (Cl. 260—666)

This invention relates to the isomerization of an ethylenically unsaturated compound which contains a cycloaliphatic nucleus.

3,375,288
DEHYDROGENATION OF HYDROCARBONS AT HIGH CONVERSION LEVELS

Armand J. de Rosset, Clarendon Hills, Ill., assignor to Universal Oil Products Company, Des Plaines, Ill., a corporation of Delaware

Filed Oct. 28, 1964, Ser. No. 407,450
9 Claims. (Cl. 260—669)



A hydrocarbon is subjected to dehydrogenation in contact with one side of a silver membrane. An oxygen-containing gas is maintained in contact with the other side of the membrane. Oxygen is diffused through the membrane to oxidize the resulting free hydrogen, liberated during the course of the dehydrogenation, thereby lowering the hydrogen partial pressure of the reaction mixture. This permits the reaction to proceed at a relatively low temperature and with high selectivity toward the desired less saturated hydrocarbon product.

3,375,289
METHOD FOR PREPARATION OF DIVINYLBENZENES

Khachik Egorovich Khchejan, Ninel Josifovna Jakovich, Alexei Fedorovich Pavlichev, and Larisa Borisovna Izrael, Moscow, U.S.S.R., assignors to Nauchno-Issledovatelsky Institute Sinteticheskikh Spirtov i Organicheskikh Produktov, Moscow, U.S.S.R.

No Drawing. Filed Jan. 12, 1965, Ser. No. 425,045
19 Claims. (Cl. 260—669)

The method of subjecting diethylbenzenes to oxidation with oxygen-containing gases to yield diacetylbenzenes, reducing catalytically the diacetylbenzenes thus formed, and thereafter dehydrating, in the presence of a dehydration catalyst, the bis-(α-hydroxyethyl)-benzene formed to yield divinylbenzenes.

3,375,290
PROCESS FOR WORK-UP OF AROMATIC C_9-HYDROCARBONS

Karl Smeykal, Wilhelm Pritzkow, Hermann G. Hauthal, and Georg Mahler, Leuna, Germany, assignors to VEB Leuna-Werke "Walter Ulbricht," Leuna, Germany

No Drawing. Filed Sept. 3, 1964, Ser. No. 394,303
9 Claims. (Cl. 260—672)

1. Method of recovering trimethylbenzene from a mixture of aromatic C_9-hydrocarbons containing the same and also containing at least one substance selected from the group consisting of ethyltoluene and isopropyltoluene, which comprises reacting said mixture with benzene in contact with a Friedel-Crafts catalyst so as to selectively transfer the corresponding ethyl or isopropyl group from said substance to said benzene to form the corresponding alkylbenzene and toluene while said trimethylbenzene remains unreacted; separating said catalyst from the reaction mixture; and fractionating the reaction mixture into its components including toluene, said alkylbenzene and trimethylbenzene by fractional distillation.

3,375,291

PROCESS FOR PREPARING DIOLEFINS

James L. Callahan, Bedford, and Ernest C. Milberger, Maple Heights, Ohio, assignors to Standard Oil Company, Cleveland, Ohio, a corporation of Ohio

No Drawing. Continuation-in-part of application Ser. No. 240,734, Nov. 28, 1962. This application Mar. 31, 1964, Ser. No. 356,028

11 Claims. (Cl. 260—680)

The catalytic oxidative dehydrogenation of monoolefins is conducted in a vertical reactor by passing oxygen and the monoolefin upwards through successive zones containing fluidized catalyst. The catalyst is regenerated by introducing the oxygen to a zone below the zone to which the monoolefin is fed.

3,375,292

DIOLEFIN PRODUCTION

Walter K. Henle, Orinda, Calif., assignor to Shell Oil Company, New York, N.Y., a corporation of Delaware

No Drawing. Filed Aug. 26, 1965, Ser. No. 482,926

8 Claims. (Cl. 260—680)

1. The process of producing β,β'-dialkyl-α,α'-diolefin by intimately contacting dialumino tris-octamethylene with acyclic hydrocarbon α-olefin of from 3 to 5 carbon atoms at a temperature of from about 100° C. to about 200° C. and a pressure of from about 1 atmosphere to about 200 atmospheres, in an inert reaction environment.

3,375,293

RESTORING CATALYST ACTIVITY IN AN ISOMERIZATION PROCESS

Walter E. Breckoff, Royal Oak, and John M. McEuen, Detroit, Mich., assignors to Ethyl Corporation, New York, N.Y., a corporation of Virginia

No Drawing. Filed Mar. 10, 1965, Ser. No. 438,739

12 Claims. (Cl. 260—683.2)

A process is described for rejuvenating an olefin isomerization catalyst whose activity has diminished during the isomerization process. The olefin isomerization catalyst consists essentially of the Group VIII metal of the second and third long periods on an inert support. The rejuvenation is accomplished by treating the spent catalyst with an alkyl benzene at elevated temperatures.

An improved terminal to internal olefin isomerization process is also described which includes the rejuvenation process set out above.

3,375,294

OLEFIN POLYMERIZATION WITH A POTASSIUM-AMINE-ACTIVATED CARBON CATALYST

William O. Beavers, El Paso, Tex., assignor to El Paso Natural Gas Products Company, a corporation of Texas

No Drawing. Filed Feb. 11, 1963, Ser. No. 257,795

9 Claims. (Cl. 260—683.15)

1. The process for polymerizing an aliphatic 1-olefine hydrocarbon feed material having up to and including 5 carbon atoms per molecule, which comprises contacting under polymerizing conditions said hydrocarbon feed material with a catalyst composition consisting essentially of activated carbon, potassium and a nitrogen containing compound from the group consisting of ammonia, primary, secondary and tertiary amines, the amount of catalyst composition falling within the range of from 0.01 weight percent to 25.0 weight percent of the hydrocarbon, the ratio of carbon to potassium falling within the range of 0.01 to 100 mol of carbon per mol of potassium and the nitrogen containing compound being present in an amount of from .001 to 5 weight percent, based on the hydrocarbon feed material.

3,375,295

BODYING POLYMER LIQUID

Richard D. Rowe, Big Spring, Tex., assignor to Cosden Oil & Chemical Company, Big Spring, Tex., a corporation of Delaware

No Drawing. Filed Aug. 31, 1964, Ser. No. 393,353

5 Claims. (Cl. 260—683.15)

A low molecular weight polymer fraction, simultaneously produced with heavier liquid polybutene, the total polymeric mixture being normally inert to substantial modification by Friedel-Crafts catalyst, is separated and further treated with Friedel-Crafts catalyst to body the same to a viscous polybutene.

3,375,296

CONVERSION OF ETHYLENE TO HIGHER 1-OLEFINS

Robert E. Reusser, Bartlesville, Okla., assignor to Phillips Petroleum Company, a corporation of Delaware

No Drawing. Filed Apr. 28, 1965, Ser. No. 451,621

11 Claims. (Cl. 260—683.15)

Ethylene is converted to higher 1-olefins using a catalyst formed on mixing chromium halide and an organolithium compound.

3,375,297

MIXTURES OF POLYHYDROXYETHERS AND POLYARYLENE POLYETHERS

Bruce P. Barth, Somerville, Thomas E. Bugel, New Market, and Warren F. Hale, Somerville, N.J., assignors to Union Carbide Corporation, a corporation of New York

No Drawing. Filed May 27, 1965, Ser. No. 459,454

17 Claims. (Cl. 260—823)

1. Polymeric mixture characterized by improved thermal stability, improved resistance to thermal stress embrittlement and excellent adhesion comprising from about 1 to about 99 parts by weight of a linear thermoplastic polyarylene polyether composed of recurring units having the formula

$$—O—E—O—E'—$$

wherein E is the residuum of a dihydric phenol and E' is the residuum of a benzenoid compound having an inert electron withdrawing group in at least one of the positions ortho and para to the valence bonds, and where both of said residua are valently bonded to the ether oxygens through aromatic carbon atoms and from about 99 to about 1 part by weight of a linear thermoplastic polyhydroxyether having the general formula

$$\text{-}O—D—O—D'\text{-}_n$$

wherein D is the residuum of a dihydric phenol, D' is a hydroxyl containing residuum of an epoxide, and n is at least 30.

3,375,298

CROSSLINKED POLYPHENYLENE OXIDE

Daniel W. Fox, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

No Drawing. Filed May 21, 1965, Ser. No. 457,797

23 Claims. (Cl. 260—830)

A crosslinked polyphenylene oxide formed by the reaction of an amino-substituted polyphenylene oxide and a di- or poly-functional curing agent reactive therewith. The ability to crosslink makes the normally thermoplastic polyphenylene oxides thermosetting and resistant to many organic solvents. Epoxy resins can be reacted with the amino-substituted polyphenylene oxides to form copolymers.

3,375,299

LATENT AMIDOPOLYAMINE CURING AGENTS FOR EPOXY RESINS AND POLYURETHANES

Morton Levine, Birmingham, Michael J. Neme, Detroit, and Steven G. Plovan, Oak Park, Mich., assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

No Drawing. Filed Aug. 16, 1965, Ser. No. 480,116

13 Claims. (Cl. 260—830)

A particulate latent diamine curing agent, which is nonreactive with urethane prepolymers, epoxy resins and the like at room temperature but operative to affect rapid cures of these materials at elevated temperatures, is prepared by reacting a suitable solid diamine in finely divided particulate form with an ethylenically saturated carboxylic acid chloride wherein the acid chloride is dissolved in a solvent in which the amine is substantially insoluble such that the acid chloride undergoes reaction with only the amine groups exposed in or near the surface of the solid particle and the unexposed active amine groups below the surface are blocked off and thereby prevented from reacting with synthetic resins at room temperature.

3,375,300

COMPOSITIONS CONTAINING MALEIC ANHYDRIDE - POLYPROPYLENE GRAFT COPOLYMERS, AND A FATTY ACID POLYAMIDE OR AN AMINE ALDEHYDE RESIN

Walter S. Ropp, Mockingbird Hills, Del., assignor to Hercules Incorporated, a corporation of Delaware

No Drawing. Filed Dec. 31, 1964, Ser. No. 422,521

7 Claims. (Cl. 260—857)

Compositions are disclosed comprising a maleic anhydride-modified propylene polymer containing as a crosslinking agent a composition containing a plurality of epoxide groups, a polyamide resin or etherified amine aldehyde resin. These are useful as primers for adhering an unmodified propylene polymer to wood or metal. The coated compositions thus exhibit improved resistance to a salt spray atmosphere.

3,375,301

POLYMER COMPOSITIONS FROM VINYL MONOMERS AND UNSATURATED POLYESTER-POLYETHER COPOLYMERS

Leslie C. Case and Laura K. Case, both of 14 Lockeland Road, Winchester, Mass. 01890

No Drawing. Continuation-in-part of application Ser. No. 168,062, Jan. 23, 1962. This application Oct. 7, 1965, Ser. No. 493,933

26 Claims. (Cl. 260—869)

Novel ethylenically unsaturated polyester-polyether resins capable of copolymerizing with vinyl monomers are prepared by the reaction of an unsaturated anhydride with an alkylene oxide in the presence of a polymerization starter selected from the group consisting of water, hydrogen sulfide, inorganic monomeric phosphorous-containing acids and organic compounds having a hydroxyl, carboxyl or sulfhydryl radical. The resins are prepared in the absence of other catalysts.

3,375,302

THERMOPLASTIC BLEND OF ABS RESIN AND AMORPHOUS, LINEAR POLYPROPYLENE AND PROCESS FOR MAKING SAME

Shinji Iwai and Naoki Yoshimi, Tokyo, Shigenobu Mita, Yokohama, and Chuji Shiode, Tokyo, Japan, assignors of one-third each to Shinji Iwai, Tokyo, Japan, Fudo Kagaku Kogyo Kabushiki Kaisha and Chisso Corporation, both of Tokyo, Japan, both corporations of Japan

No Drawing. Filed Oct. 9, 1964, Ser. No. 402,919

Claims priority, application Japan, Oct. 15, 1963, 38/55,287

15 Claims. (Cl. 260—876)

Thermoplastic blend of an ABS resin and a small amount of amorphous polypropylene having an average molecular weight of between 10,000 and 100,000. The blend has improved melt flowing properties and a higher heat distortion temperature.

3,375,303

ETHYLENE POLYMER COMPOSITION PROVIDING GOOD CONTOUR SURFACE AT VERY HIGH EXTRUSION RATES

William H. Joyce, Somerset, N.J., assignor to Union Carbide Corporation, a corporation of New York

No Drawing. Continuation-in-part of application Ser. No. 225,859, Sept. 24, 1962. This application Oct. 7, 1964, Ser. No. 402,318

4 Claims. (Cl. 260—897)

High speed extrudability of low density polyethylene is improved by addition of a minor quantity of high density, high molecular weight polyethylene having a density of at least 0.930, a melt index of not more than 0.1 decigram per minute and a melt flow of not more than 10 decigrams per minute.

3,375,304

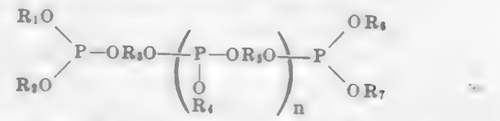
POLYPHOSPHITES

Millard S. Larrison, Livingston, N.J., assignor, by mesne assignments, to Small Business Administration, Richmond, Va., and First National Bank of Morgantown, Morgantown, W. Va.

No Drawing. Filed Jan. 4, 1965, Ser. No. 423,393

9 Claims. (Cl. 260—929)

Compounds are prepared having the formula



where R_1, R_2, R_4, R_6 and R_7 are carbocyclic aryl, R_3 and R_5 are a member of the group consisting of polyalkylene glycol, alkylidene bisphenol, hydrogenated alkylidene bisphenol, and a ring halogenated alkylidene bisphenol from which the two terminal hydrogens have been removed and n is an integer of at least 1. The compounds are useful as stabilizers for vinyl chloride resins and hydrocarbon polymers.

3,375,305

PROCESS FOR SELF-TRANSESTERIFICATION OF PHOSPHATE POLYOLS

John T. Patton, Jr., and Robert J. Hartman, Wyandotte, Mich., assignors to Wyandotte Chemicals Corporation, Wyandotte, Mich., a corporation of Michigan

No Drawing. Filed Sept. 25, 1964, Ser. No. 399,398

10 Claims. (Cl. 260—982)

Polymeric phosphate esters are prepared by the self-transesterification of a phosphate polyol in the presence of a ferrous metal catalyst.

3,375,306

METHOD OF PRODUCING DENSE, SINTERED BODIES OF UO_2 OR UO_2-PuO_2 MIXTURES

Lewis Eric Russell, Oxford, John David Lawrence Harrison, Chilton, and Norman Harry Brett, Hathersage, near Sheffield, England, assignors to United Kingdom Atomic Energy Authority, London, England

No Drawing. Continuation of application Ser. No. 106,185, Apr. 28, 1961. This application Jan. 11, 1965, Ser. No. 424,822

Claims priority, application Great Britain, Apr. 29, 1960, 15,240/60

5 Claims. (Cl. 264—.5)

A method of producing dense sintered bodies of either uranium dioxide or a mixture of uranium dioxide and plutonium dioxide comprising pressing a powder to form a compact, heating the compact at a temperature of from 1300° C. to 1600° C. in a sintering atmosphere which is

either carbon dioxide or carbon dioxide containing carbon monoxide and cooling the sintered body in a reducing atmosphere which, in the case where the body is uranium dioxide, is dry hydrogen, wet hydrogen or a mixture of carbon dioxide and carbon monoxide and, in the case where the body is mixed uranium and plutonium dioxides, is wet steam or carbon dioxide mixed with carbon monoxide. In this way, a sintered body having a ratio of oxygen to metal atoms from 1.98:1 to 2.02:1 and a density in excess of 95% of the theoretical density is obtained.

3,375,307

PROCESS FOR THE FABRICATION OF FUEL ELEMENTS FOR NUCLEAR REACTORS

Pierre Blum, Grenoble, Claude Moreau, Seyssinet-Pariset, and Louis Bochirol, Grenoble, France, assignors to Commissariat à l'Energie Atomique, Paris, France

No Drawing. Filed Jan. 17, 1966, Ser. No. 520,879
Claims priority, application France, Jan. 21, 1965, 2,841
2 Claims. (Cl. 264—.5)

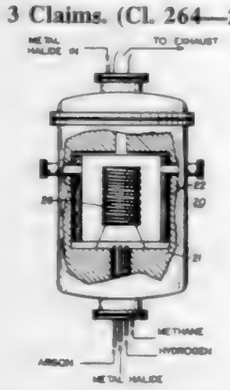
1. Process for the fabrication of spherical fuel elements for use in high temperature reactors of the "pebble-bed" type, the steps of preparing a kernel of fuel by molding a plastic paste of a refractory combustible powder having a granular size between 100 and 400 microns mixed with a binder, drying the kernel, then depositing pyrolytic carbon in the pores of the kernel by cracking gaseous hydrocarbons therein at a temperature between 800° and 1000° C., whereby the kernel is rendered impermeable, then coating the kernel with a layer of graphite using a paste formed in the same way as the paste forming the kernel, then cracking gaseous hydrocarbons at a temperature between 800° and 1000° C. in the layer to deposit carbon in and render the layer impermeable, and then introducing the coated kernel into a recess in a graphite ball, the ratio of resistance to compression of the kernel and of the layer being at least equal to 1.5:1.

3,375,308

METHOD OF MAKING HIGH PURITY AND NON-MELTING FILAMENTS

Michael Turkat, Bayside, N.Y., assignor, by mesne assignments, to Space Age Materials Corporation, Woodside, N.Y., a corporation of Delaware

Continuation-in-part of application Ser. No. 130,153, Aug. 8, 1961. This application Apr. 21, 1964, Ser. No. 361,492
3 Claims. (Cl. 264—29)



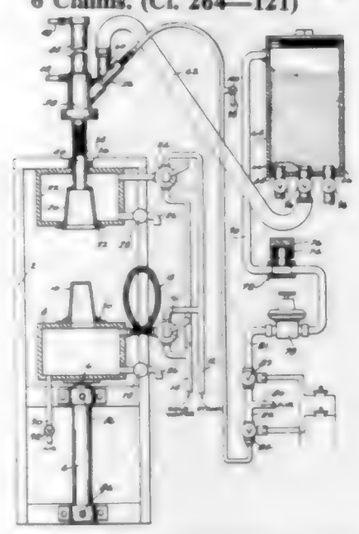
1. The method of forming a pure and non-melting filament, comprising the steps of cracking a hydrocarbon gas at a temperature of at least 3,450 to 5,000 degrees Fahrenheit to form a vapor, depositing said vapor on a mandrel, which has a grooved surface, to form a coating thereon, removing said coating from said grooved surface mandrel in the form of a filament, and stretching said filament at a temperature of upwards of about 4500 degrees Fahrenheit to increase its tensile strength.

3,375,309

METHOD OF INTRODUCING PARTICULATE MOLDABLE MATERIAL INTO A CONFINED SPACE

Donald E. Stevens, Sheboygan Falls, Wis., assignor to Kohler General, Inc., a corporation of Wisconsin

Filed June 17, 1964, Ser. No. 375,699
6 Claims. (Cl. 264—121)



1. A method introducing particulate moldable material into a confined space in an otherwise substantially closed mold for the molding of a workpiece, said method comprising the storage of particulate molding material at a point remote from the mold, the temporary establishment of superatmospheric pressure on the material in storage, the temporary establishment of a current of convection fluid toward the mold, the entrainment of particulate material in said current, the material receiving kinetic energy from the fluid of said current, the kinetic energy of the entrained material carrying it into the mold, developing back pressure of convection fluid in the mold and thereby arresting further flow of such fluid while the kinetic energy of the entrained material carries such material onward into the mold, the return of the convection fluid from the mold under the back pressure developed by such material in the mold, a reverse current of said fluid moving into particulate molding material which is still in storage, any excess of material at the mold being carried away from the mold by the return of the reversed current of said fluid, the trapping of the returned material in the material in storage, and the subsequent release of the returned convection fluid.

3,375,310

METHOD FOR MAKING SURGICAL CATHETERS

Wilbur R. Koehn, Sands Point, N.Y.

Continuation-in-part of application Ser. No. 82,534, Jan. 13, 1961. This application Feb. 11, 1964, Ser. No. 347,990
6 Claims. (Cl. 264—139)

1. The method of fabricating a catheter needle for insertion into a body cavity comprising a catheter and penetrating element wherein the penetrating element is adapted to be withdrawn by sliding the penetrating element rearwardly while the catheter is being held following insertion of the catheter needle into the body cavity comprising the steps of: providing a penetrating element having a hub at one end and a pointed end at the other and with an intermediary shank therebetween; dipping the hub and shank of the penetrating element into a plastic resin in liquid phase to a level adjacent its pointed end to coat the shank and hub with a continuous layer of liquid resin; thereafter subjecting the plastic resin with a first heat application to alter the viscosity of the plastic resin coating to a predetermined level and substantially

simultaneously suspending the coated shank and hub from the pointed end of the penetrating element permitting the resin layer to run off and flow under the influence of gravity sufficiently to obtain a predetermined taper and thickness so as to produce a tubular wall of gradually and progressively increasing thickness from a thin end having a substantial knife edge adjacent the pointed end of the penetrating element along the shank thereof toward

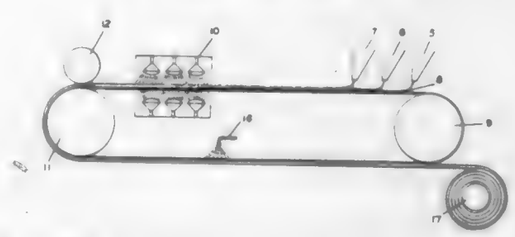
the hub for substantially the entire length of said shank; subjecting the coated penetrating element to a second heat application to convert it from a liquid to a substantially solid phase and partially cure it sufficiently to the wall thickness; and then serving the plastic resin around the hub and removing the end from the hub farthest the pointed end of the penetrating element, whereby to form a catheter needle.

3,375,311

METHOD OF FORMING DECORATIVE THERMOPLASTIC VINYL RESIN SHEETS

John P. Franze, Lancaster, Pa., assignor to Armstrong Cork Company, Lancaster, Pa., a corporation of Pennsylvania

Filed June 5, 1963, Ser. No. 285,665
9 Claims. (Cl. 264—171)



A method for forming a multiple layer integral vinyl sheet material in which a plurality of layers of a free-flowing thermoplastic vinyl resin mix of porous particles of unfused thermoplastic vinyl resin, liquid vinyl plasticizer, vinyl stabilizer, pigment and filler, each of the layers being of a composition different from adjacent layers, are laid up on a non-porous carrier, heated to a fluidized condition, and extruded between the carrier and a non-porous consolidating roll, both the carrier and the non-porous consolidating roll being driven at substantially the same speed to minimize mixing between the layers being consolidated therebetween.

3,375,312

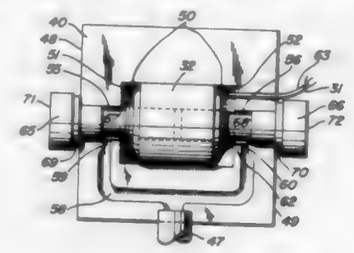
ENCAPSULATION PROCESS

Edward E. Hart, Springfield, Ohio, assignor, by mesne assignments, to TRW Inc., Cleveland, Ohio, a corporation of Ohio

Filed Aug. 26, 1963, Ser. No. 304,500
5 Claims. (Cl. 264—272)

1. In a method for the manufacture of a stator for electric motors, the steps comprising:

assembling a stack of annular core laminations presenting upon assembly a plurality of winding slots,
disposing a stator winding in said slots,
assembling a stack of laminations about said core laminations to form a magnetic yoke thereabout,
placing said assembly into the cavity of a mold,



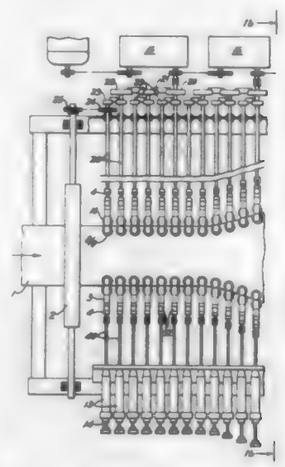
injecting a thermoplastic material into the center of the mold and flowing same radially outwardly about the ends of said multi-stacked assembly and into the interstices thereof,
then during the course of the polymerization of said material shearing said sprues formed within said mold, and thereafter retaining said article within the mold until fully cured, whereby no finishing steps are required to remove burrs and no stresses are set up in the molded material adjacent the sprues.

3,375,313

PROCESS FOR THE CONTINUOUS BIAXIAL STRETCHING OF A TRAVELING SHEET

Hieronymus Zygan and Otto Koch, Leverkusen, Hermann Schnell, Krefeld-Urdingen, Arthur Prietzschk, Dormagen, and Kurt Römling, Leverkusen, Germany, assignors to Farbenfabriken Bayer Aktiengesellschaft, Leverkusen, Germany, a corporation of Germany

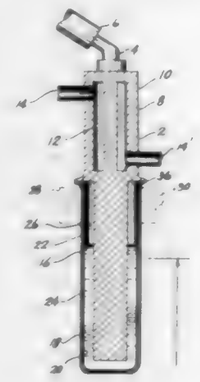
Continuation-in-part of application Ser. No. 259,474, Jan. 25, 1963, which is a division of application Ser. No. 74,715, Dec. 7, 1960, now Patent No. 3,114,929, dated Dec. 24, 1963. This application Oct. 21, 1965, Ser. No. 505,598
Claims priority, application Germany, Dec. 12, 1959, F 30,071
3 Claims. (Cl. 264—289)



A sheet is passed through independently controlled holding devices which are in spaced relationship to one another and aligned on opposite sides of the sheet and independent of the other pairs of holding devices at each end of the sheet. The independently controlled holding devices are independently operated to independently control the force and distance between each pair of opposing holding devices to correspondingly control the tension on the sheet in the transverse direction while the sheet is being stretched in the longitudinal direction.

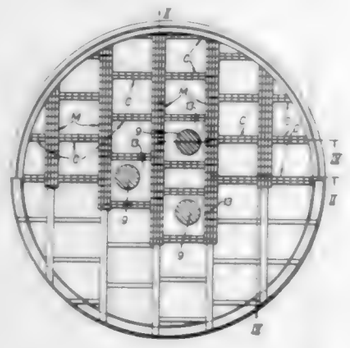
ELECTRICAL

3,375,314
ELECTRODE FOR GLASS MELTING FURNACES
Woodrow E. Sinner, Vashon, Wash., assignor to The Boeing Company, Seattle, Wash., a corporation of Delaware
Filed Oct. 8, 1964, Ser. No. 402,413
9 Claims. (Cl. 13—6)



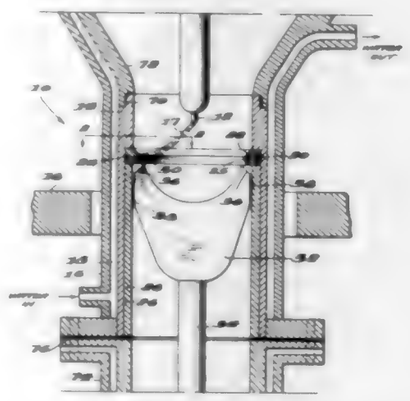
1. An electrode for sustaining glass or the like in a molten condition comprising in combination:
(a) an elongated body having an upper, middle, and bottom section,
(b) said upper section provided with electrical connecting means and cooling means,
(c) said bottom section enveloped with a shell of platinum mounted on said middle section in liquid tight relationship and being in spaced relationship with said bottom section, thus forming an enclosed space, and
(d) said enclosed space being partly filled with bismuth and its remaining space being a vacuum.

3,375,315
ARC FURNACE ROOF
William Gray, Uddingston, Scotland, assignor to John G. Stein & Company Limited
Filed Nov. 17, 1964, Ser. No. 411,739
Claims priority, application Great Britain, Nov. 18, 1963, 45,410/63
5 Claims. (Cl. 13—9)



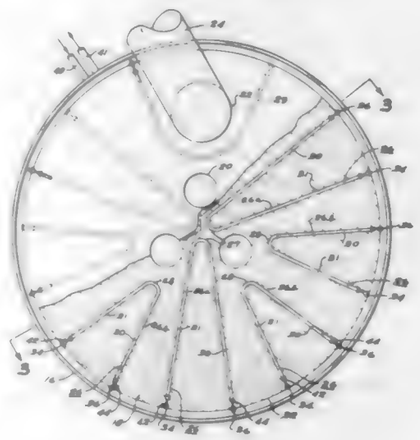
1. A furnace roof comprising a plurality of spaced parallel main beams extending across the roof, a plurality of cross beams transverse to said main beams, said main beams and said cross beams defining a plurality of rectangular open frames of small size compared to the size of the roof as a whole, each of said beams being composed of suspended bricks, and filler materials which fill said open frames, said filler materials being supported by said beams.

3,375,316
ELECTRIC ARC FURNACE FOR THE PREPARATION OF ACETYLENE BY PYROLYSIS OF HYDROCARBONS
Alexander Thomas Harris, Claymont, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware
Filed Aug. 18, 1964, Ser. No. 390,287
6 Claims. (Cl. 13—9)



The apparatus herein described and claimed relates to improvements in an electric arc furnace which may be used for pyrolysis of hydrocarbons and more particularly, to an improved outer electrode for this furnace, which electrode has longer life and facilitates removal of carbon deposits forming thereon during operation of the furnace.

3,375,317
WATER-COOLED ELECTRIC FURNACE ROOF
Kenneth W. Hansen, Bethel Park, and Donald L. Martin, Monroeville, Pa., assignors to Harbison-Walker Refractories Company, Pittsburgh, Pa., a corporation of Pennsylvania
Filed Mar. 1, 1965, Ser. No. 436,131
8 Claims. (Cl. 13—9)



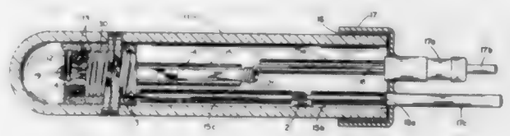
1. In an electric furnace, a circular roof containing a monolithic refractory material and provided with a plurality of centrally located vertical openings there-

through, an electrode disposed in each opening, a plurality of independent U-shaped conduits embedded entirely within said refractory material, said conduits being characterized by having an apex disposed closely adjacent an electrode and legs extending toward the outer periphery of the roof, said conduits being spaced substantially equal distances apart from one another, the ends of each leg of said U-shaped conduits extending through the refractory material and exterior thereto along the outer periphery thereof so as to define an inlet and an outlet for each conduit, each inlet and outlet having a separate control valve, a common tubing attached to each inlet for discharging the cooling medium from said conduits.

3,375,318
METHOD AND AN ARRANGEMENT FOR MEASURING AND CONTROLLING ELECTRODE POSITIONS IN ELECTRIC FURNACES AND THE LIKE
Ove Kjølseth, Oslo, Norway, and Sven Harry Willners, Lidingo, Sweden, assignors to Elektrokemisk A/S, Oslo, Norway, a company of Norway
Filed Oct. 22, 1964, Ser. No. 405,726
Claims priority, application Sweden, Oct. 24, 1963, 11,683/63
6 Claims. (Cl. 13—13)

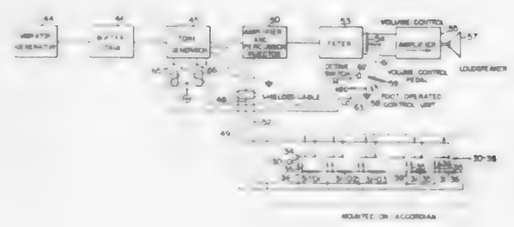
A furnace electrode is displaced by an arbitrary differential in height and the effect of such displacement upon a dependent electrical parameter, such as the resistance, is measured. The derivative of the change in resistance with respect to the displacement in height is formed and such derivative alone, or multiplied by the resistance value comprising one or the other of the limits of the change in resistance or preferably the average of the limits, is correlated to the actual height of the submerged tip of the electrode above a pool of molten material in the furnace. In this way, the position of the electrode tip can be accurately determined even though it is not directly observable during operation of the furnace.

3,375,319
HIGH TEMPERATURE ELECTRICAL HEATING UNIT
Jacob Howard Beck, Newton, Mass., assignor to BTU Engineering, Inc., Waltham, Mass., a corporation of Delaware
Filed Nov. 22, 1965, Ser. No. 509,137
5 Claims. (Cl. 13—25)



A long-life electrical heating unit is described which can be used in electrical diffusion furnaces at temperatures up to 1600° C. without the need of an inert atmosphere. The unit comprises an outer insulating tube nonporous to gas, a central electrically insulating tube porous to gas, a thin high resistance wire on the central tube and a thick low resistance lead made of metal of higher oxygen affinity than the wire metal.

3,375,320
ACCORDION KEYBOARD CONTROLLED ACCOMPANIMENTAL TONE GENERATOR
George J. Carras, 622 Avery St., Parkersburg, W. Va. 26101
Continuation-in-part of application Ser. No. 291,396, June 28, 1963. This application Feb. 23, 1965, Ser. No. 439,505
7 Claims. (Cl. 84—1.04)

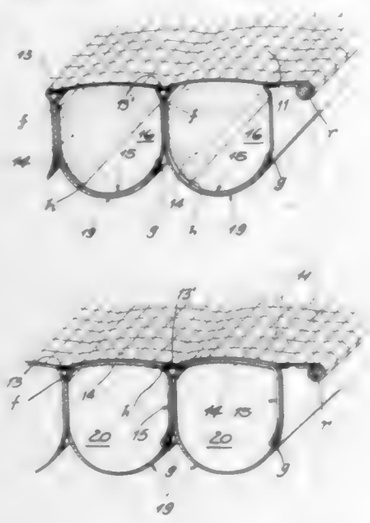


An attachment for an accordion, said accordion comprising a keyboard having a plurality of keys, and an individual valve associated with each key, depression of a particular key causing operation of its associated valve to cause the sounding of a predetermined note corresponding to said particular key, said attachment comprising a plurality of individual electrical contact means each operatively associated with one of the keys of said keyboard within a predetermined range comprising a plurality of contiguous octaves, a plurality of resistors connected to said contact means to produce an effective resistance, the magnitude of which is controlled by said contact means, electrically controllable tone generating means, said tone generating means comprising a pitch control circuit connected for response to said effective resistance, said tone generating means producing a tone the pitch of which is determined by the magnitude of said effective resistance, said pitch corresponding to the note produced by said accordion in response to the depression of said particular key, and loudspeaker means connected to said tone generating means for acoustically reproducing a note corresponding to said predetermined tone to accompany said note sounded by said accordion.

3,375,321
WALL STRUCTURE WITH MEANS FOR CONTROLLING THE RADIATION TRANSMISSIVITY OF THE STRUCTURE
Nikolaus Laing, 35–37 Hofener Weg, 7141 Aldingen, Germany
Filed July 16, 1965, Ser. No. 472,606
Claims priority, application Germany, July 17, 1964, L 48,331
The portion of the term of the patent subsequent to May 3, 1983, has been disclaimed
14 Claims. (Cl. 174—35)

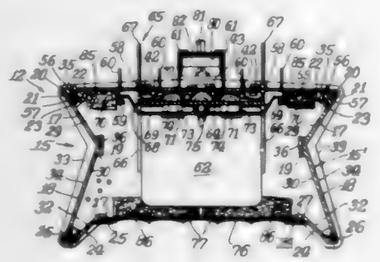
A wall structure in which a plurality of independent adjacent foil strips each having a portion of low radiation transmissivity integrally joined to a portion of high radiation transmissivity are fixed along edges thereof to a pair of outer layers in such a manner that when the spaces between one outer layer and said strips are filled with fluid, said portions of low radiation transmissivity will abut against the other outer layer to prevent penetra-

tion of radiation through the wall, while when the spaces between the strips and the other outer layer are filled with



fluid, radiation will be substantially free to penetrate through the wall structure.

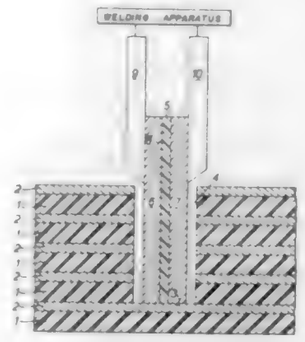
3,375,322
POWER UNIT ASSEMBLY FOR FLUORESCENT LIGHTING SYSTEM
Pasquale S. Serio, Prospect Heights, and Elden H. Witte, Wauconda, Ill., and Benjamin S. Benson, Jr., New Haven, Conn., assignors to Thomas Industries Inc., Louisville, Ky., a corporation of Delaware
Filed Sept. 23, 1963, Ser. No. 310,817
6 Claims. (Cl. 174—52)



4. A fluorescent lamp power unit assembly comprising a housing having a top wall, ballast means within said housing, frame means secured to said ballast means, means including unrestrained resilient means for mounting said frame means relative to said housing whereby to dampen vibrations of said ballast means, and said frame means having projections extending through said top wall and unconnected with the latter for dissipating heat developed by said ballast means.

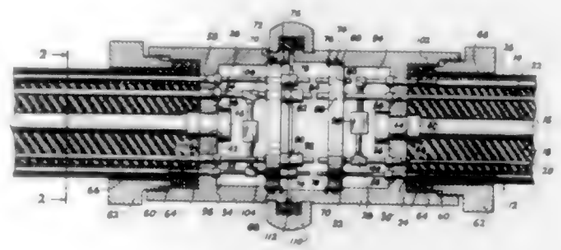
3,375,323
MULTI-LAYER PRINTED CIRCUIT TERMINAL ARRANGEMENT AND METHOD OF MAKING SAME
Antony James Mayhew, Billericay, England, assignor to The Marconi Company Limited, London, England, a British company
Filed Mar. 30, 1966, Ser. No. 538,696
Claims priority, application Great Britain, Apr. 5, 1965, 14,359/65
7 Claims. (Cl. 174—68.5)

This invention is directed to a multi-layer printed circuit and terminal arrangement in which a multi-layer circuit board is formed from a plurality of conductive circuit layers and insulated layers in sandwiched relationship. A clearance hole extends from one side of the arrangement and terminates internally thereof at one of the conductive layers. A plurality of conductors spaced by an insulating



member are disposed within the clearance hole, and terminal ends of the conductors in contact with the conductive layer are secured thereto.

3,375,324
PRESSURE CABLE
Sheldon Martin Miller, 1403 E. 5th Court, Tulsa, Okla. 74120
Filed Oct. 23, 1965, Ser. No. 503,109
6 Claims. (Cl. 174—101.5)

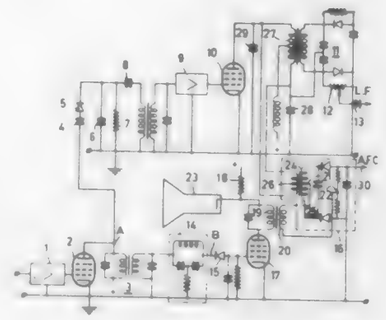


2. A pressure cable comprising a plurality of cable sections connected in tandem relation, each of said cable sections having an internal chamber means and means provided in each cable section for automatically controlling the specific gravity thereof by introducing fluid into and removing fluid from the said chamber means in response to the external pressure on said cable section to maintain a predetermined buoyancy for the cable sections within a surrounding fluid.

3,375,325
INTERCARRIER TELEVISION RECEIVER AFC CIRCUIT
Peter Johannes Hubertus Janssen, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Aug. 25, 1964, Ser. No. 391,856
10 Claims. (Cl. 178—5.8)

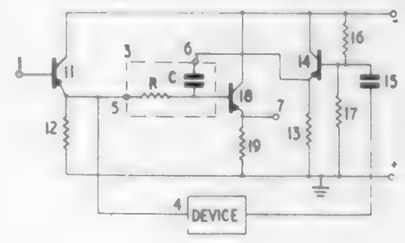
1. Means for producing a control voltage responsive to tuning in a superheterodyne signal receiver of the type adapted to receive a composite signal including a first signal modulated on a carrier wave and a second signal modulated on a subcarrier wave, said receiver comprising means for transposing the frequency of said composite signal to provide an intermediate frequency signal, first and second signal channels, means applying said intermediate frequency signal to said first and second

channels, said first channel comprising suppressing filter means tuned to the frequency of said subcarrier wave in said intermediate frequency signal, and first demodulating means for demodulating the output of said suppressing filter means, said second channel comprising second demodulating means for demodulating said inter-



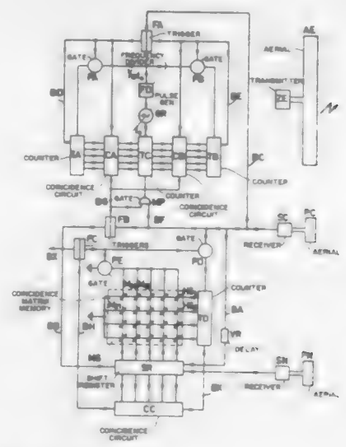
mediate frequency signal and band-pass filter means tuned to the demodulated frequency of said subcarrier wave, phase detector means, means for applying output signals from said first and second demodulator means to said phase detector means and means for deriving said control voltage from said phase detector means.

3,375,326
VIDEO D.C. INSERTION CIRCUIT
John Lewis Edwin Baldwin, Croydon, and Derek John Parkyn, Sanderstead, England, assignors to Rank-Bush Murphy Limited, London, England, a British company
Filed Aug. 20, 1964, Ser. No. 390,942
Claims priority, application Great Britain, Aug. 23, 1963, 33,421/63
10 Claims. (Cl. 178—7.1)



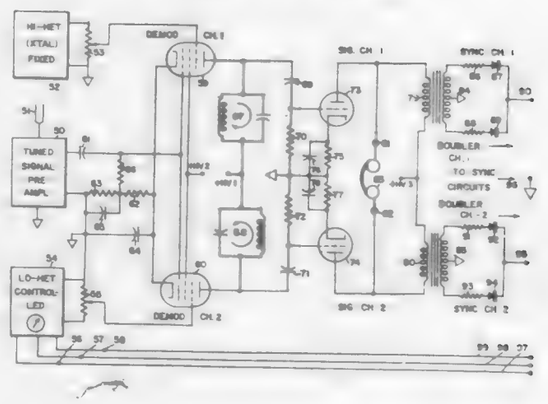
1. A video signal processor comprising the combination of: a first source of video signals having a predetermined frequency range including zero frequency and having a correct zero-frequency component; a second source of modified video signals having said predetermined frequency range and having a direct-current component which is not said correct component; a combining network having first and second input ports and an output port; a first signal path having a predetermined variation of response with signal frequency over said predetermined frequency range including finite response at zero signal frequency within said network from said first input port to said output port; a second signal path within said network from said second input port to said output port, said second path having a variation of response with signal frequency over said predetermined frequency range which is complementary to that of said first path including zero response at zero signal frequency; circuit means applying signals from said first source to said first input port; circuit means applying signals from said second source to said second input port; and circuit means for deriving said processed video signal from said output port.

3,375,327
PULSE CODE RECEIVER
Jacobus Marius den Hertog, Emmasingel, Eindhoven, Netherlands, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 1, 1964, Ser. No. 400,747
Claims priority, application Netherlands, Oct. 2, 1963, 298,734
9 Claims. (Cl. 178—69.5)



A receiver for pulse code signals where successive code groups have the same number of elements, in which means are provided to produce a train of pulses having repetition rates corresponding to a given portion of the duration of one code group, and means for scanning the elements of a following code group with the train of pulses. The system is adapted for the scanning of signals in which the duration of code groups has some variation, in order to facilitate the scanning of the elements of the code groups at their centers.

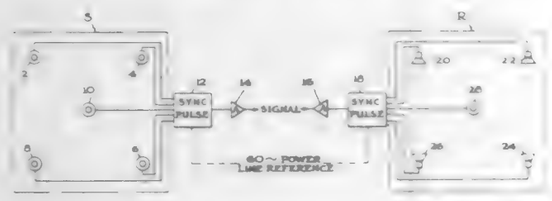
3,375,328
RECEIVER FOR PHASE SHIFT COMMUNICATION SYSTEM
Ellison S. Purington, Gloucester, and Emory Leon Chaffee, Belmont, Mass., assignors to Ralph G. Lucas, Nathaniel L. Leek, and The National Shawmut Bank, executors of last will of John H. Hammond, Jr., deceased
Filed July 5, 1960, Ser. No. 40,639
6 Claims. (Cl. 178—88)



1. In a receiver for a continuous wave signalling system wherein signalling is effected by phase shift of a continuous wave carrier, a pair of local oscillators operating

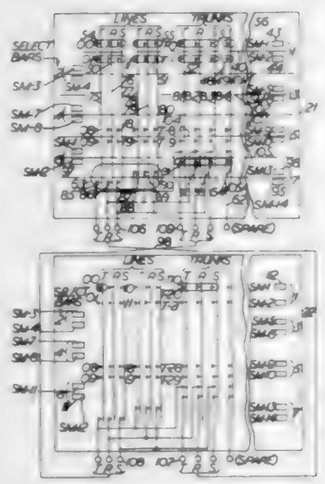
respectively above and below the frequency of the received carrier, means producing a beat note between each of said oscillators and said carrier, means deriving the second harmonic of each of said beat notes, means comparing said harmonics to derive therefrom an error signal corresponding to any variation in phase between said harmonics, and means responsive to said error signal to vary the phase of one of said oscillators in a sense to reduce the value of said error signal.

3,375,329
MONAXIAL QUADRAPHONIC RECORDING SYSTEM
Robert E. Prouty, Olney, Md., assignor of one-half to Francis E. Ryan, Arlington, Va.
Continuation of application Ser. No. 371,923, June 2, 1964. This application May 2, 1967, Ser. No. 635,626
1 Claim. (Cl. 179—15)



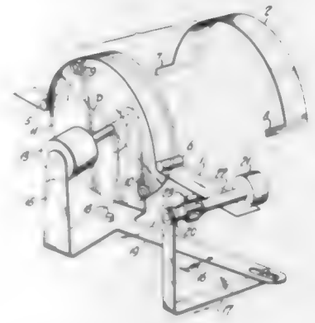
A method for recording and reproducing sound for creating a true environmental transposition of a given audio situation in which a quadrangular arrangement of microphones defining a plane is positioned in an overlying and surrounding relationship with respect to the audio sound stage from which a source of sound originates. The microphones are electronically sampled and the signal derived therefrom is transmitted to a receiver having a corresponding quadrangular arrangement of loudspeakers which define a plane overlying and surrounding an area removed from the sound stage. The audio output from the receiver is sampled in phase with the frequency that the microphones are sampled and is fed to the loudspeakers.

3,375,330
MULTISWITCH FOR INTERNALLY SELECTIVELY INTERCONNECTING VERTICAL MULTIPLES TO ACCOMPLISH PRIMARY AND SECONDARY CONNECTIONS
John Clarke Gibson, Oak Lawn, Ill., assignor to International Telephone and Telegraph Corporation
Filed Dec. 11, 1963, Ser. No. 329,835
4 Claims. (Cl. 179—22)



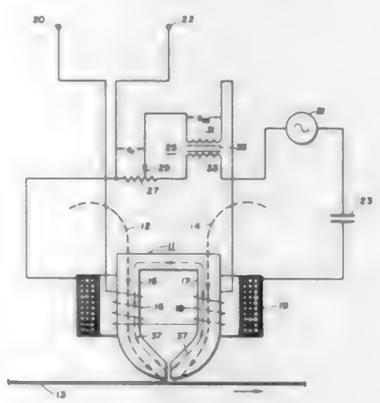
An automatic telephone exchange having a group of multiswitches with horizontal and vertical paths. Means are provided in the multiswitches for accomplishing a primary-to-secondary type connection using a single vertical multiple.

3,375,331
SYSTEM FOR RECORDING AND REPRODUCING A PERIODIC SIGNAL
Masatoshi Okazaki and Shiro Okamura, Tokyo, Japan, assignors to Nippon Electric Company Limited, Tokyo, Japan, a corporation of Japan
Filed Oct. 21, 1963, Ser. No. 317,478
7 Claims. (Cl. 179—100.2)



A video signal is recorded on magnetic tape in oblique tracks relative to the translation direction of the tape medium. It is reproduced by a sensing means whose tracking direction is variable relative to the recording medium and depends upon the velocity of the medium.

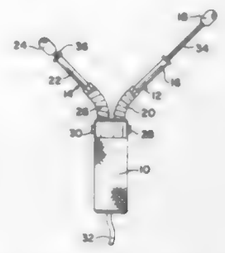
3,375,332
FLUX-RESPONSIVE REPRODUCING HEAD FOR MAGNETIC TAPE RECORDERS
William A. Geyder, 8510 Flower Ave., Apt. 2-B, Takoma Park, Md. 20045
Filed May 28, 1964, Ser. No. 371,147
8 Claims. (Cl. 179—100.2)



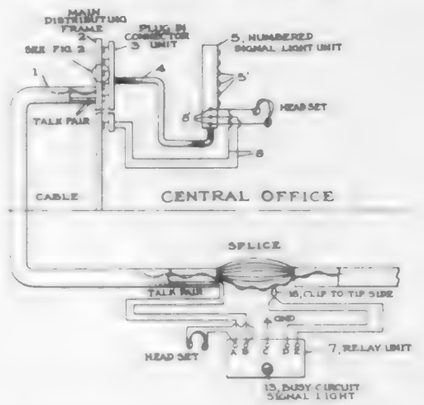
A magnetic tape playback head which performs as a flux-responsive reproducer device, having a saturable core reproducer head with flux detecting windings encircled by an air core coil which is energized by an A.C. voltage.

3,375,333
DUAL MICROPHONE
Leon H. Hagopian, 29 N. Highland Ave., Lansdowne, Pa. 19050
Filed Oct. 5, 1964, Ser. No. 401,417
2 Claims. (Cl. 179—148)

A dual support for adjustably mounting two microphones, one for use by one person and the other for use by another person, the microphones being connected to one transmitter.



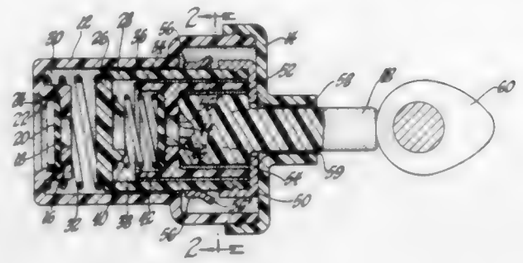
3,375,334
TESTING APPARATUS FOR IDENTIFYING WIRE PAIRS IN MULTICONDUCTOR CABLES
Robert D. Robinson, 132 Fairfield Ave., Syracuse, N.Y. 13207
Filed June 12, 1964, Ser. No. 374,761
5 Claims. (Cl. 179—175)



My invention concerns testing apparatus for identifying conductor pairs at a remote point of a multiconductor cable such as is commonly used in the communications field. The apparatus preferably comprises visual signal indicator means in the form of a plug-in numbered signal light indicator unit which can be quickly connected to a group of wire pairs of a multipair cable at the terminal frame at the usual central office of a telephone system or the like, and which is operable responsive to the making of contact by a clip or other appropriate connector of a battery or other suitable power circuit, with one conductor (preferably the tip side) of a wire pair at any remote point along the cable, thereby energizing one of the signal lights of the numbered indicator unit so that the wire pair may be identified by a corresponding identification number when communicated by a helper or observer at the central office to a worker or splicer at the remote station where the clip or connector is applied to the cable.

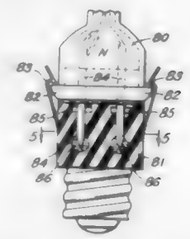
The plug-in signal light indicator unit also preferably includes means for establishing verbal communication over one wire pair of the cable between the central office station and the remote station along the cable where a special relay unit is operatively connected to the cable, said relay unit including a communication circuit connected to the "talk pair" of the cable, and also including a warning indicator, such as a red signal light, which is operable responsive to the relays of the relay unit to energize the warning signal light when the clip or connector is connected to a "busy" wire pair of the cable. Upon removal of the clip from contact with the "busy" wire pair, the relays function to restore the identification equipment for further immediate use in identifying other wire pairs of the cable, and the warning signal light is simultaneously de-energized when the clip is disconnected from the "busy" wire pair.

3,375,335
SAFETY CIRCUIT SWITCH WITH A PNEUMATIC TIME DELAY RETURN
Werner F. Schultz, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Nov. 22, 1965, Ser. No. 509,135
4 Claims. (Cl. 200—33)



An electric switch which includes a fluid time delay return so as to remain actuated by a periodic motion.

3,375,336
ELECTRICAL SWITCH AND RECEPTACLES USING CONDUCTIVE FLUIDS
Guy H. Tripp, 209 N. Columbian Road, Bay City, Mich. 48706
Filed Aug. 4, 1965, Ser. No. 489,775
4 Claims. (Cl. 200—152)

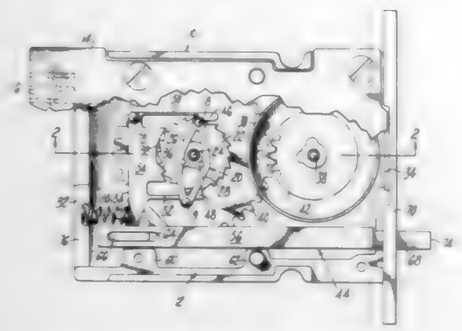


Switches and receptacles are disclosed for the make and break of electric circuits. The receptacle embodies a threaded male electrical socket for threaded connection with ordinary household type outlets to convert such outlets to a prong receiving receptacle. The male or prong elements (e.g., an electric plug), instead of making direct physical contact with the current carrying or hot receptacle elements, are connected thereto by an intermediary pocket of mercury. The switch comprises a sphere rotatably enclosed within an exterior spherical shell. Discrete pockets of mercury are distributed over the surface of the inner sphere and interconnected, in pairs, through the center of the sphere. The sphere may be rotated about any axis and selected connections may be made via the interconnected mercury pockets, when brought into physical contact with selected pairs of circuit leads imbedded in the outer spherical shell.

3,375,337
PUSHBUTTON ROTARY SWITCH HAVING UNITARY ACTUATOR
James P. Barrett, West Hartford, Edmund T. Slattery, Hartford, and John H. Norris, Haddam, Conn., assignors to Veeder Industries Inc., a corporation of Connecticut
Filed Jan. 5, 1966, Ser. No. 518,916
5 Claims. (Cl. 200—156)

Switch comprising a housing and a rotary brush supported therein, a printed circuit board supported on said housing in perpendicular relation to the rotational axis of the rotary brush, the rotary brush having contacts carried

thereon in contact with the printed circuit board, and a unitary actuator including a double drive pawl and ratchet wheel subassembly drivingly connected to the rotary

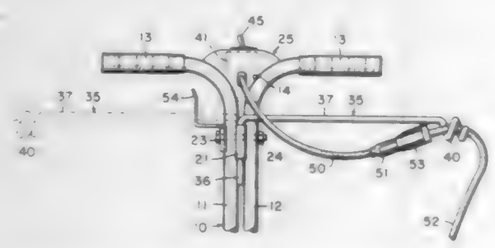


brush for selectively orienting the contacts relative to the printed circuit board to establish a desired electrical circuit connection.

3,375,338
EXTENSION CORD CONTROL ASSEMBLY FOR ELECTRIC MOWER

Glenn A. Delf, St. Louis, Mo., assignor to Atlas Tool & Manufacturing Company, a corporation of Missouri

Filed Dec. 17, 1965, Ser. No. 514,632
4 Claims. (Cl. 200—157)



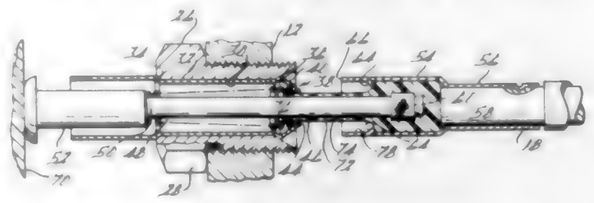
The cord control assembly includes a bracket secured to the lawn mower handle, the bracket including a plate portion and a socket portion. An L-shaped control arm, pivotally mounted in the socket portion, extends laterally from the handle. The control arm includes a loop through which an extension cord extends. The extension cord includes an electrical connector connected to the electrical connector of a power cable which is connected to the power means. The control arm loop engages the extension cord so that tension in the extension cord is transferred to the control arm. When the included angle between the extension cord and the control arm is an acute angle the control arm can flip from one side to the other of the handle. The cord assembly bracket secured to the handle by a single fastener which extends through the plate portion of the bracket and through the handles. A flange on the plate portion cooperates with the handle to preclude rotation of the bracket about the fastener.

3,375,339
PUSHBUTTON DOOR SWITCH

Ralph F. Schaber, Warren, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a corporation of Delaware

Filed Oct. 22, 1965, Ser. No. 501,022
1 Claim. (Cl. 200—159)

A switch for automatically turning on one or more lights when a door is opened, or for energizing a signal lamp or the like when a control pedal or lever is operated. The switch has a spring loaded plunger which is disposed for reciprocal movement in a tubular housing which housing provides a fixed contact surface. The movable contact element of the switch is carried by the plunger and the surface of the plunger is covered with a dielectric material so that the accumulation of dirt or moisture within the space between the plunger and movable con-

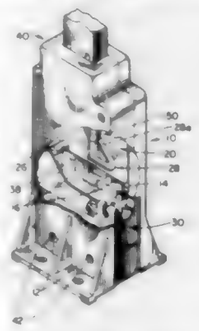


tact will not result in the establishment of a current path therebetween. Accordingly, electrolytic decomposition of the switch contact is averted.

3,375,340
MOMENTARY ACTUATING ARRANGEMENT

John O. Wright, Freeport, Ill., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware

Filed Feb. 9, 1967, Ser. No. 614,930
5 Claims. (Cl. 200—160)

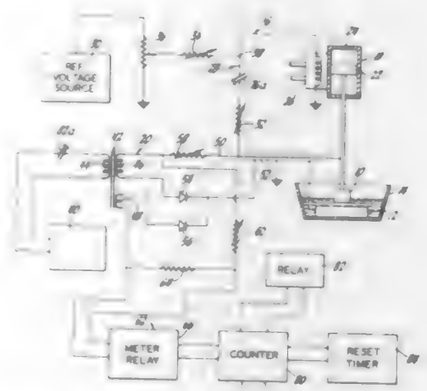


An arrangement to provide a momentary actuation of a control device wherein initial movement of an actuating means brings about actuation of the control device, further movement in the same direction brings about deactuation and deactuation is continued during return movement.

3,375,341
METHOD AND APPARATUS FOR ELECTRICAL STOCK REMOVAL

Robert S. Richards, Oak Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed July 24, 1964, Ser. No. 385,004
11 Claims. (Cl. 219—69)

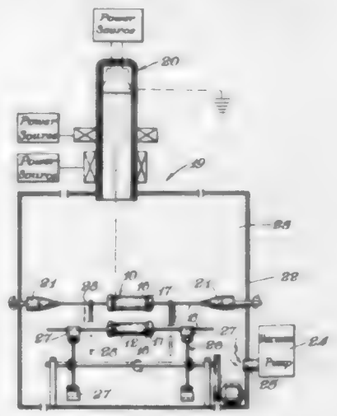


A power supply for electrical discharge machining apparatus incorporating a dual secondary transformer which applies a modified full-wave voltage across the machining gap. One secondary provides a low voltage across the gap between gap discharges to provide a burning current and is utilized by an arcing control to sense an arcing condition. The arcing control includes a meter relay, which responds to the arcing condition and causes the cutting tool and workpiece electrodes to be separated so as to clear the arcing condition. The arcing control also counts the number of separations of the electrodes within a certain time interval and, if excessive, causes the power to be turned off.

3,375,342
ELECTRON BEAM MILLING OF ELECTRICAL COATINGS

Preston Robinson, Williamstown, Mass., assignor to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts

Original application Mar. 4, 1963, Ser. No. 262,626. Divided and this application Sept. 21, 1964, Ser. No. 397,979
7 Claims. (Cl. 219—69)



2. A process for preparing an electric circuit member, comprising providing a ceramic support carrying a thin electrically conductive coating film, milling out a linear gap in the film at a speed of at least about 100 inches per minute, the milling being effected with a focused 15 to 20 kilovolt electron beam that leaves the milled gap with microscopically straight edges and at the same time glazes the surface of the ceramic exposed at the gap.

3,375,343
ELECTRON DISCHARGE DEVICE ASSEMBLY METHOD

Ernest T. Du Pre, Tell City, Ind., assignor to General Electric Company, a corporation of New York

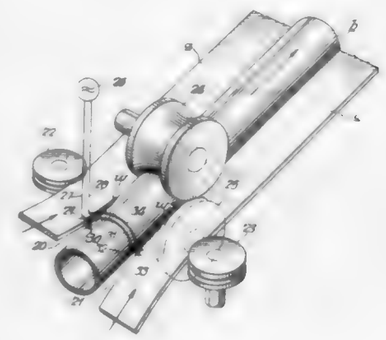
Filed Aug. 31, 1964, Ser. No. 393,304
4 Claims. (Cl. 219—96)

The invention provides a method of manufacturing electron discharge devices having an insulating stem that supports a plurality of stem leads which are of equal length and which are supported in parallel axial relation with respect to the device, and in which selected ones of the stem leads are to be connected at the inner ends thereof to an interconnecting plate of conducting material; the method of assembly being further characterized in that when the inner ends of the selected stem leads are maintained in alignment with the interconnecting plate, an electrical potential difference is applied between the interconnecting plate and the inner ends of the stem leads to effect forging engagement therebetween to produce a percussive weld.

3,375,344
WELDING ASSEMBLIES OF ELONGATED MEMBERS

Fred Kohler, New York, and Wallace C. Rudd, Larchmont, N.Y., assignors to American Machine & Foundry Company, New York, N.Y., a corporation of New Jersey

Filed May 7, 1964, Ser. No. 365,578
17 Claims. (Cl. 219—107)



Method and apparatus for simultaneously welding metal members together at two spaced weld points using high frequency electrical current and V-gaps between the members with each weld point at the apex of a V-gap and the current being supplied to the edges of both V-gaps in advance of the weld points from a single current source. The current is caused to flow from a first point on one edge of a V-gap in advance of one weld point to a second point on the edge of the other V-gap in advance of the other weld point, rather than directly from one weld point to the other, by the use of a proximity conductor carrying the welding current and extending between said first and second points in close proximity to, but not in electrical contact with, the member or members intermediate said first and second points.

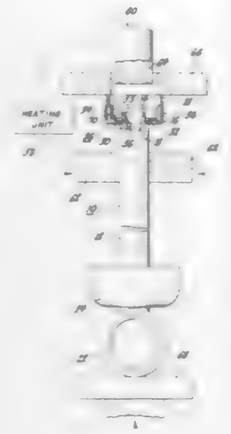
3,375,345
METHOD OF MANUFACTURING SHOCK ABSORBER SUBASSEMBLIES

Robert J. Schweller, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed July 15, 1964, Ser. No. 382,749
1 Claim. (Cl. 219—107)

In preferred form, a method for manufacturing a shock absorber subassembly including a piston and a piston rod having a flow-through control passageway including the steps of preforming the piston rod to have a small diameter tubular extension on one end thereof with a uniform O.D. and an I.D. flaring radially outwardly, preforming a piston to have an end wall with a central opening therethrough and including an inclined surface within the piston surrounding the opening, connecting the two preformed parts by steps including radially outwardly

deforming the walls of the small diameter extension into press-fit relationship with the inclined surface without welding the parts together and without encroaching upon the cross-sectional area of the flow passageway through the rod.



3,375,346
INFRARED SURFACE HEATING UNIT WITH TWO FILAMENTS

Richard S. Gaugler, James W. Jacobs, and Donald C. Siegla, Dayton, Ohio, assignors to General Motors Corporation, Detroit, Mich., a corporation of Delaware

Filed Sept. 22, 1965, Ser. No. 489,241
2 Claims. (Cl. 219—449)

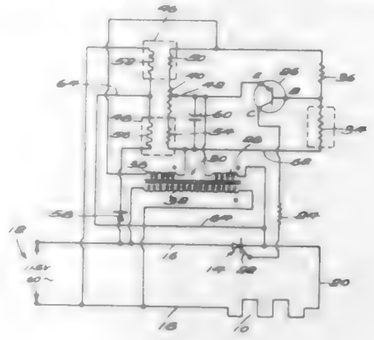
In preferred form an infrared surface heating unit including an upper non-opaque utensil supporting plate and a lower infrared reflector plate enveloping a first resistance element and an energization circuit for pulsatingly energizing the first resistance element into a visible light range observable through the utensil supporting plate, a second smaller wattage resistance element and a second energization circuit for continuously energizing the second resistance element to continuously illuminate the upper support plate.

3,375,347
HEATER CONTROL CIRCUIT

John Seymour Seney, Seaford, Del., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Filed June 10, 1965, Ser. No. 462,884
6 Claims. (Cl. 219—499)

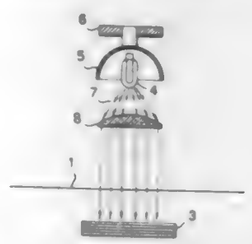
A heater control circuit in which a temperature sensing bridge with an auxiliary capacitor provides proportional control to the gate of a silicon controlled rectifier having its anode and cathode series connected with a heater to a source of alternating current.



3,375,348
RECORD IDENTIFICATION SYSTEM AND METHOD

Norbert Goldstern, Spoorlaan 30, Tilburg, Netherlands

Filed Feb. 8, 1963, Ser. No. 257,265
Claims priority, application Germany, Feb. 16, 1962, G 34,282
7 Claims. (Cl. 235—61.11)

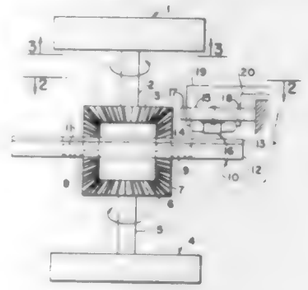


1. A record identification system employing a record medium having a plurality of mutually equal perforations therein in a visually comprehensible symbol, the record identification sorting system including an array of radiation sensitive devices, said radiation sensitive devices having differing electrical responses whereby record mediums having different symbols with the perforations disposed in different patterns therein produce different electrical responses when radiant energy is passed therethrough onto the array of radiation sensitive devices.

3,375,349
REVERSIBLE COUNTING DEVICES

Norman Yudewitz, Westport, Conn., assignor to American Machine & Foundry Company, a corporation of New Jersey

Filed Sept. 3, 1964, Ser. No. 394,277
6 Claims. (Cl. 235—92)

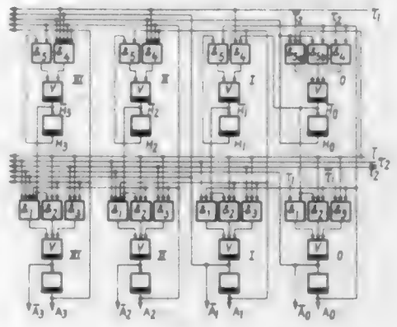


This invention relates to a simple and effective drive means for accomplishing bi-directional relative movement between a magnetizable disc and a read head to accomplish add-subtract functions.

3,375,350
STATIC COUNTER HAVING MAIN AND AUXILIARY STORES

Dieter Petzold, Berlin-Neukolln, Germany, assignor to Licentia Patent-Verwaltungs-G.m.b.H., Frankfurt am Main, Germany

Filed Mar. 16, 1965, Ser. No. 440,157
Claims priority, application Germany, Mar. 20, 1964, L 47,348
16 Claims. (Cl. 235—92)

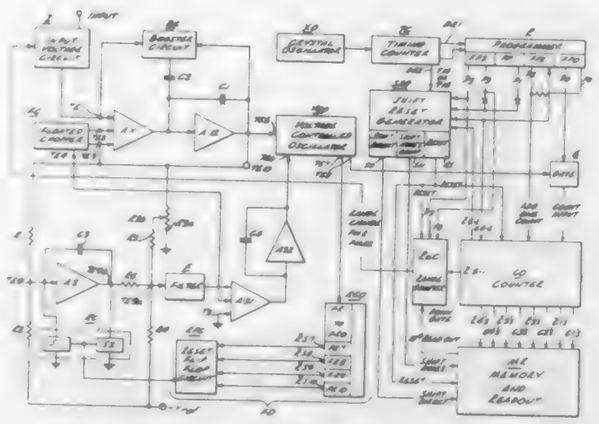


A static counter for counting forward or backward and controlled by timely staggered counting signals and auxiliary counting signals. The counter has a plurality of counter stages each incorporating a main store and an auxiliary store, the instants at which each main store is set and erased being fixed by the associated auxiliary store, with each auxiliary store being in one binary condition for setting the associated main store and in the opposite binary condition for erasing the associated store. The input of each main store is connected directly to its respective associated store and to all of the preceding main stores, and the input of each auxiliary store is connected to the respective associated main store, to all of the preceding main stores, except, in certain cases, the lowest-order store, and to the lowest-order auxiliary store.

3,375,351
DIGITAL VOLT METER

Joe E. Deavenport and Don W. Sexton, San Diego, Calif., assignors, by mesne assignments, to Weston Instruments, Inc., Newark, N.J., a corporation of Delaware

Original application Apr. 3, 1963, Ser. No. 270,336, now Patent No. 3,327,228, dated June 20, 1967. Divided and this application Jan. 3, 1967, Ser. No. 619,107
3 Claims. (Cl. 235—92)



1. A digital system comprising:

voltage to frequency converter means having input circuit means and having output circuit means, and having a predetermined output frequency for zero input voltage, said converter means increasing in frequency for input voltage of one polarity and decreasing in frequency for input voltage of the opposite polarity;

a counter coupled to said output circuit means of said voltage to frequency converter means and having a maximum count setting in response to said predetermined output frequency;

a pair of switches coupled to and controlled by said counter;

storage circuit means;

transfer circuit means coupling said storage circuit means to said counter and having control circuits; and

control means coupled to and controlled by said switches and having output circuit means coupled to said control circuits.

3,375,352
BOWLING SCORER UTILIZING SEMICONDUCTOR ELEMENTS

Robert W. House, Rolland D. King, and Robert F. Roller, Columbus, Ohio, and David A. Williams, Largo, Fla., assignors, by mesne assignments, to Brunswick Corporation, Muskegon, Mich., a corporation of Delaware

Filed Apr. 9, 1963, Ser. No. 271,644
51 Claims. (Cl. 235—151)

35. An apparatus for scoring a bowling game having a multiplicity of scoring frames in which pinfall occurs from the rolling of at least one bowling ball, comprising: electronic means for receiving pinfall information, a computation means connectable to said electronic pinfall receiving means, an electronic storage means for storing scores earned by a player as a bowling game progresses connectable to said computation means, and electronic control means connected to said computation means for directing the computation of bowling scores.

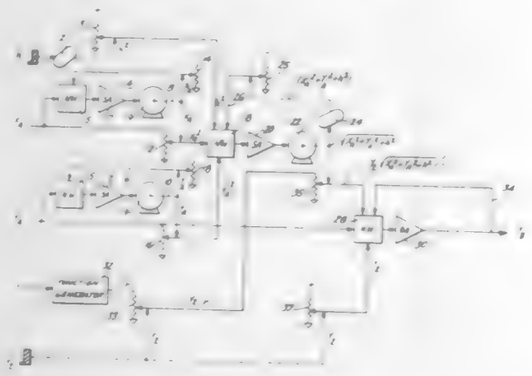
3,375,353
STEREOGRAPHIC RADAR SYSTEM

Arthur L. Rossoff, Huntington Station, and Howard E. Lustig, Flushing, N.Y., assignors to General Instrument Corporation, Newark, N.J., a corporation of New Jersey

Continuation of application Ser. No. 175,701, Feb. 26, 1962. This application July 24, 1967, Ser. No. 655,674
8 Claims. (Cl. 235—151)

1. In apparatus for producing a three-dimensional target representation from a single radiation detector which comprises means for deriving, from the real radiation signal emanating from said target and indicating the location of said target relative to said detector, a synthetic signal corresponding to the location of said target relative to a point spaced from said detector in a predetermined manner, the imaginary line of sight from said spaced point through said target intersecting a reference plane at the XY coordinates x_B and y_B respectively, said detector being at an $x=0$, $y=0$ position and an altitude of h above said reference plane, said spaced point being at an $x=0=x_A=x_B$, $y=y_2$ position and an altitude of h above said reference plane, r being the range of the target from said detector, and x_A and y_A being the coordinates of the intersection with said reference plane of the

line of sight from said detector to said target, and stereoscopically combining said real and synthetic signals; the improvement which comprises said means for deriving said synthetic signal comprising inputs for h, y_A, r and y_3, and further comprising means for generating a first electrical signal corresponding to h^2, a second electrical signal corresponding to y_A, a third electrical signal corresponding to y_A^2, a fourth electrical signal corresponding to y_2, and a fifth electrical signal corresponding to $-y_2/r$,



means for adding said first and third signals to produce a sixth signal, means for feeding said sixth signal to a feedback servosystem the output of which, defining a seventh signal, is squared before it is fed back, means for multiplying said fifth and seventh signals to produce an eighth signal, means for adding said second, fourth and eighth signals, and means for driving a feedback servo system from the output of said last mentioned means to produce an output corresponding to y_B, where y_B equals $y_2+y_A-(y_2/r)(y_A^2+h^2)^{1/2}$.

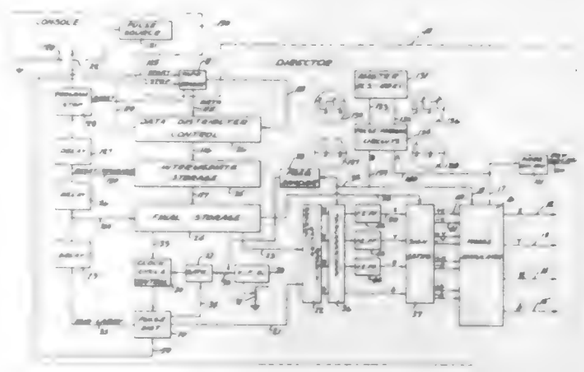
3,375,354
SIGNAL GENERATING CIRCUITS FOR MACHINE TOOL CONTROL SYSTEMS

Paul Harry McGarrell, South Euclid, Ohio, assignor, by mesne assignments, to The Bunker-Ramo Corporation, Stamford, Conn., a corporation of Delaware

Original application Mar. 31, 1958, Ser. No. 725,414. Divided and this application Feb. 15, 1961, Ser. No. 89,567

22 Claims. (Cl. 235—151.11)

1. In a circuit for generating a phase modulated signal, a frequency divider having an input and an output, a high frequency pulse source, gate means for feeding pulses from said high frequency source to said input of said frequency divider, means for generating two series of control pulses with each pulse of each series occurring at a time between pulses from said high frequency source, means for adding the pulses of one of said series to the pulses from said pulse source to create a phase lead in the output of said frequency divider, and means responsive to each control pulse of the other series for closing said gate means for a time interval sufficient to prevent application of a fixed number of pulses from said pulse source to said frequency divider to create a certain phase lag in the output of said frequency divider.



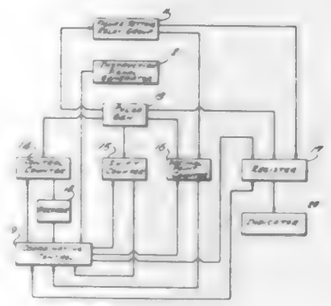
3,375,355
REGISTER FOR A CALCULATOR THAT UTILIZES "EXCESS 3" CODE

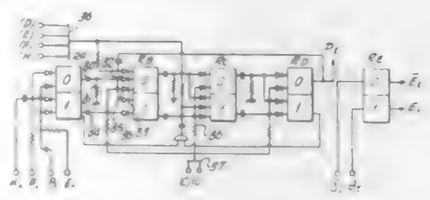
Atsushi Asada, Osaka, and Yoshihisa Uchida, Kobe, Japan, assignors to Hayakawa Denki Kogyo Kabushiki Kaisha, Osaka, Japan, a company of Japan

Filed Oct. 27, 1964, Ser. No. 406,863

Claims priority, application Japan, Nov. 1, 1963, 38/58,484, 38/58,485; Nov. 6, 1963, 38/59,358, 38/59,359, 38/59,360, 38/59,361; Nov. 16, 1963, 38/61,529

8 Claims. (Cl. 235—156)





1. A register for a computer comprising at least four flip-flops each having two sections interconnected one with the other so that when one section representing 0 in the binary code is conducting the other section representing 1 in said code is nonconducting and vice versa, first connections between said one section of each flip-flop and both sections of the next succeeding flip-flop, second connections each including control means between the other section of each flip-flop and both sections of the next flip-flop, means simultaneously controlling each of said control means to interrupt and complete the associated connections and means for applying input pulses simultaneously to both sections of the first of said series of flip-flops whereby each input pulse applied to the first of said flip-flops when said control means are operated to interrupt the associated circuits will cause said flip-flops to register the next successive decimal digit in terms of a four bit binary code with the first said flip-flop representing the least significant bit and wherein the application of a pulse to the first said flip-flop when said control means are operated to complete the associated circuits will cause said flip-flops to register the complement of the number registered by said flip-flops prior to the application of the last said pulse.

3,375,356
CALCULATOR DECIMAL POINT ALIGNMENT APPARATUS

Thomas J. Scuitto, Malibu, and Matthew A. Alexander, Santa Monica, Calif., assignors to Wyle Laboratories, El Segundo, Calif., a corporation of California

Filed June 12, 1964, Ser. No. 374,574

10 Claims. (Cl. 235—160)

1. In a calculator apparatus including a memory comprised of at least one register which includes a plurality of stages and a decimal point identifying means identifying one of said stages, the improvement comprising:

means for successively generating manifestations respectively representing different digits of the whole portion of a multidigit number to be stored in said one register and for temporarily storing said manifestations in arbitrarily chosen ones of said plurality of stages;

means for initiating an align operation; and

means responsive to said align operation being initiated for shifting all of said manifestations stored in said arbitrarily chosen stages until the manifestation representing the least significant digit in said whole portion of said number to be stored is stored in said stage identified by said decimal point identifying means.

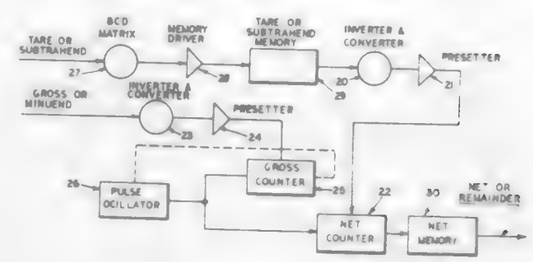
3,375,357
AUTOMATIC SUBTRACTING DEVICE

Launcelot Dekker, La Porte, Ind., and LeRoy J. Ryan, Jr., Chicago, Ill., assignors to Maatschappij van Berkel's Patent N.V., Leidschendam, Netherlands, a limited-liability company of the Netherlands

Filed Oct. 22, 1965, Ser. No. 500,728

20 Claims. (Cl. 235—174)

An electronic automatic subtracting device receiving subtrahend and minuend decimal figures and delivering at the output side the remainder in decimal figures including means for converting the figures to the BCD code and inverting same to the 9-complement, forcing net and gross counters to the count of the inverted figures, pulsing the counters once to convert the figures to the 10-complement,



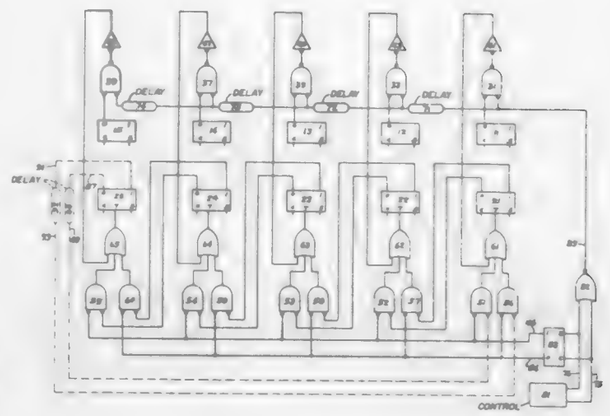
and pulsing the counters until the gross counter resets to zero, thereby leaving the difference in the net counter.

3,375,358
BINARY ARITHMETIC NETWORK

Abraham Franck, Minneapolis, Minn., assignor to Fabri-Tek Incorporated, Minneapolis, Minn., a corporation of Wisconsin

Filed Aug. 30, 1965, Ser. No. 483,765

7 Claims. (Cl. 235—175)



A binary adder-subtractor network having a first register comprising a plurality of bistable storage elements and adapted to hold the addend-subtrahend, and a second register also comprising a plurality of bistable elements and adapted to hold the augend-minuend. The bistable elements of the second register are logically connected to form an up-down counter, the direction of count being selective dependent upon whether addition or subtraction is desired. The second register also acts as the accumulator, thus holding the final results. Accumulation is achieved by adding or subtracting the appropriate addend or subtrahend bit at the corresponding bit significance of the accumulator-counter. Because of the counting action of the accumulator, the sum or difference is formed.

3,375,359
ANALOG MULTIPLIER

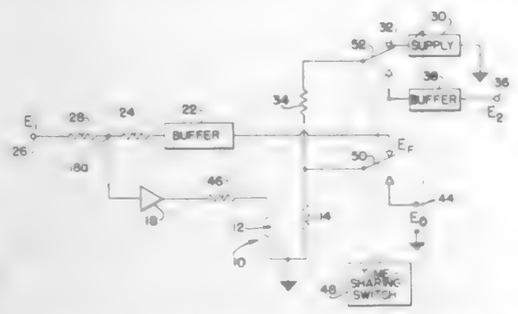
John L. Mason, Nashua, N.H., assignor to Sanders Associates, Inc., Nashua, N.H., a corporation of Delaware

Filed Aug. 24, 1964, Ser. No. 391,651

3 Claims. (Cl. 235—194)

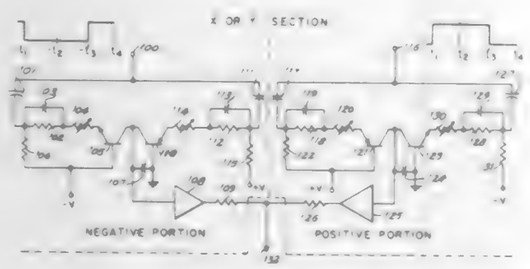
The present invention is directed to an electrical analog multiplier for producing an output signal equal to the product of two input signals; one of said signals being applied to a non-mechanical transducer whose output is applied to both a linearizing circuit and to a second signal path, whereby the second signal is applied to the second

signal path and the output of the transducer affects the second signal path in accordance with magnitude of the



first input signal, to thereby provide an output at the second signal path which is equal to the product of said first and second signals.

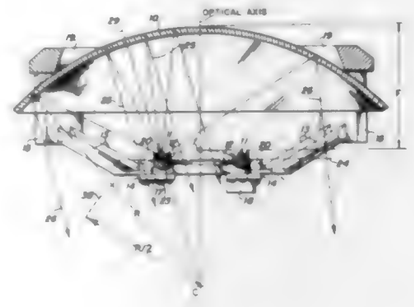
3,375,360
HIGH-SPEED WAVEFORM SYNTHESIZER
John Marez, San Diego, Calif., assignor to the United States of America as represented by the Secretary of the Navy
Filed Apr. 29, 1964, Ser. No. 363,655
3 Claims. (Cl. 235—197)



A high-speed waveform synthesizer is disclosed which may be typically employed to accept a digital type of input signal and develop therefrom appropriate deflection signals for a cathode ray tube to cause it to stroke the electron beam in order to depict symbols or alpha-numeric characters on the face of a cathode ray tube. Accordingly, the synthesizer may typically comprise X and Y axis sections and each of the X and Y axis sections contain positive and negative waveform generating means. The circuit within each of the X and Y axis sections comprises a first switching means connected to receive a first digital input signal in square wave form and is connected to a fixed amplitude positive potential source. A fixed bias means is connected to also receive the same first digital input signal and is adapted to impress a bias upon the first switching means for permitting conduction only upon a positive excursion of the first digital input signal.

A comparable second switching means is connected to receive a second digital input signal in the form of a square wave representative of digital data and is connected to a fixed amplitude of negative potential. A second bias means is connected to receive the same second digital input signal and to impress a bias upon the second switching means for permitting its conduction only upon a negative excursion of the second digital input signal. First and second integrating means are connected to the outputs to the first and second switching means to develop respective ramp signals having maximum amplitudes commensurate with the fixed amplitude positive and negative potential sources which are connected to the first and second switching means respectively. A common output circuit is connected to receive the ramp signals developed by the respective integrating means and thereby develops a composite output signal appropriate for deflection of a typical cathode ray tube employ to depict symbolic or alpha numeric characters.

3,375,361
OPTICAL ILLUMINATION SYSTEM
Thomas L. Thompson, Ingleside, and Theodore J. Schulze, Hinsdale, Ill., assignors to Chicago Aerial Industries, Inc., Barrington, Ill., a corporation of Delaware
Filed Nov. 10, 1965, Ser. No. 507,179
6 Claims. (Cl. 240—1.3)



1. An optical illumination system for use with a source of electrical energy and a camera of focal length F_1, comprising

a concave principal reflector of focal length F,

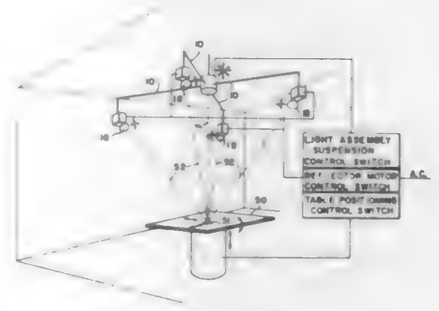
forward reflector means comprising

at least one cylindrical reflector element of length L positioned facing the principal reflector at a distance F from it, said reflector element being further located at a distance L/2 from the optical axis of said principal reflector and oriented to be perpendicular to the plane defined by said axis and the midpoint of said element,

support means for securing said forward reflector means to said principal reflector, and

a straight tubu'ar light source positioned within each cylindrical reflector element.

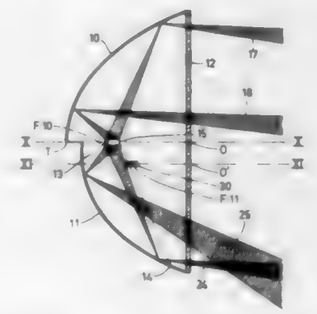
3,375,362
MEANS TO CONTROLLABLY DIRECT A PLURALITY OF SPOTLIGHTS
Hans U. Klippert, Hanau (Main), Germany, assignor to Quarzlampengesellschaft mbH, Hanau (Main), Germany
Filed Mar. 21, 1966, Ser. No. 536,079
Claims priority, application Germany, Mar. 24, 1965, Q 824
7 Claims. (Cl. 240—1.4)



A lighting system provided with a plurality of individual spotlights, each comprising a reflector: a light source; said light source situated within said reflector to

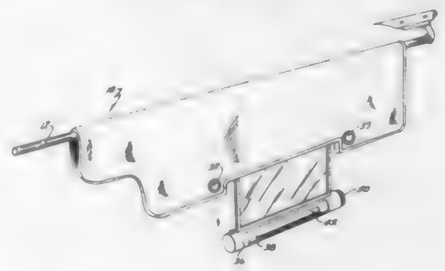
produce a beam of light; a first and second rotational means to cause rotations of said reflector about a reference axis thereof and about an intersecting axis, intersecting said reference axis, said first rotational means to rotate said reflector about said intersecting axis, said second rotational means to rotate said reflector about said reference axis.

3,375,363
VEHICLE HEADLIGHTS WITH PROFILED COVER GLASSES
Johannes Rijnders and Willem Elenbaas, Emmasingel, Eindhoven, Netherlands, assignors to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 6, 1965, Ser. No. 493,417
Claims priority, application Netherlands, Oct. 14, 1964, 64—11,903
4 Claims. (Cl. 240—41.25)



A vehicle headlight with a reflector constituted of two concave mirrors connected together and two filaments coacting therewith. The cover glass is profiled to effect a different measure of transverse spreading of the light at the bottom thereof.

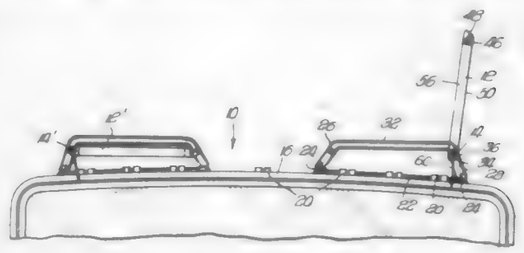
3,375,364
VISOR-MIRROR ASSEMBLY
Konrad H. Marcus, Holland, Mich., assignor to Donnelly Mirrors, Inc., Holland, Mich., a corporation of Michigan
Filed Oct. 21, 1965, Ser. No. 499,404
4 Claims. (Cl. 240—4.2)



A vehicle visor assembly with an interior compartment from which a mirror is controllably extensible, the mirror preferably being semi-transparent to serve as a glare filter, and preferably a combined handle and light on the lower mirror edge for shifting the mirror and illuminating the object, with a switch to operate the light, preferably automatically with mirror extension and retraction.

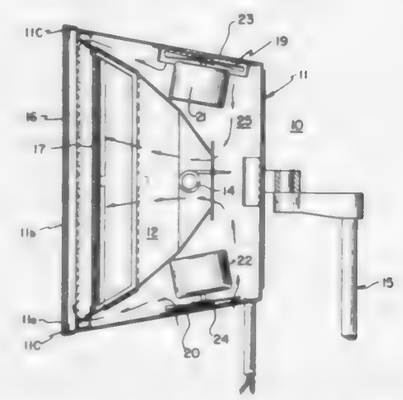
3,375,365
AUTOMOBILE LIGHT
Louis E. Gross, Chicago, Ill., assignor to Unity Manufacturing Company, Chicago, Ill., a corporation of Illinois
Filed Oct. 12, 1965, Ser. No. 495,277
3 Claims. (Cl. 240—7.1)

An automobile light which is mounted to a luggage carrier rack unit adapted to mount to the roof of an automobile. The light includes an elongate bar normally



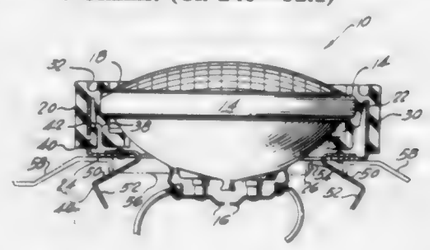
extending substantially horizontally and pivotable into a vertical position.

3,375,366
HIGH INTENSITY PRINTING LAMP
William N. Scheppe, Chicago, Ill., assignor to The Nuarc Company, Chicago, Ill., a corporation of Illinois
Filed Dec. 28, 1965, Ser. No. 516,904
2 Claims. (Cl. 240—47)



An improved cooling arrangement is provided for a high intensity lamp such as used for printing, photocopying and the like. The cooling arrangement includes means for directing cooling air against the high intensity light source and further directing the cooling air against the translucent cover of the lamp. Additionally the translucent cover includes spaced plates and cooling air is directed between the spaced plates.

3,375,367
SNAP-IN HEADLIGHT ASSEMBLY
Charles A. Woodcock, Springfield, Ill., assignor to Stewart-Warner Corporation, Chicago, Ill., a corporation of Viriginia
Filed May 31, 1966, Ser. No. 554,019
4 Claims. (Cl. 240—52.1)

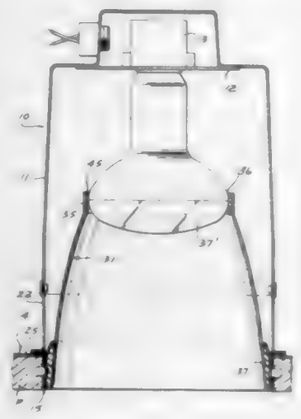


The following specification describes a snap-in headlamp assembly comprising a resilient mount which detachably receives both a headlamp and a frame member with the frame member carrying a pair of rearwardly and radially outwardly extending cantilever L-shaped arms for snap-in engagement with the tractor housing to retain both the mount and lamp on the tractor.

3,375,368
LIGHTING FIXTURE AND REFLECTOR THEREFOR

Stanley Dorsky, Somerset, Mass., assignor to Aluminum Processing Corp., Fall River, Mass., a corporation of Massachusetts

Filed Aug. 8, 1966, Ser. No. 570,965
7 Claims. (Cl. 240—78)

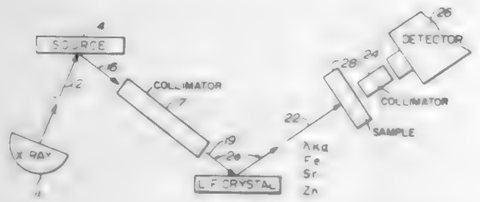


This invention relates to the art of lighting fixtures and more particularly to a bowl shaped reflector and method of forming the same, said reflector comprising a bowl-shaped structure having a mouth with a reversely bent rim extending outwardly therefrom, a band of deformable resilient material positioned between said rim and the body of said reflector, said rim having an indentation on the outer surface thereof.

3,375,369
MATRIX CORRECTED X-RAY FLUOROMETRIC ANALYSIS METHOD

Marvin Goldman and Ruth P. Anderson, Davis, Calif., assignors to the United States of America as represented by the United States Atomic Energy Commission

Filed July 13, 1965, Ser. No. 471,777
10 Claims. (Cl. 250—51.5)

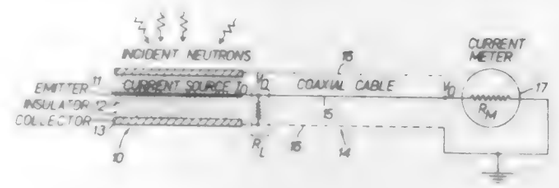


X-ray fluorometric analysis of elemental materials present in a matrix of unknown composition as incorporated with low Z binders into a specimen form of predetermined size and weight. Monochromatic X-rays characteristic of the element to be determined and of known intensity I_0, are passed through the specimen form and the intensity, I, of the emergent X-rays is determined, wherefrom the ratio of $I/I_0=T$, the transmittance factor of the specimen is determined. Subsequent irradiation with polychromatic X-rays is then employed to ascertain the net characteristic monochromatic fluorescent X-ray output, S, of the unknown amount of said element in the specimen. The amount of said element is then determined using the newly discovered linear relationship between transmittance and sensitivity factors, e.g., by using calibration plots of said factors obtained from known composition specimens or by the use of corresponding simple linear equations.

3,375,370
SELF-POWERED NEUTRON DETECTOR

John W. Hilborn, Chalk River, Ontario, Canada, assignor to Atomic Energy of Canada Limited, Ottawa, Ontario, Canada, a corporation of Canada

Continuation-in-part of application Ser. No. 298,284, July 29, 1963. This application Dec. 28, 1965, Ser. No. 528,674
7 Claims. (Cl. 250—83.1)

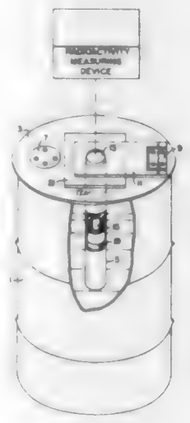


A self-powered neutron detector particularly suitable for flux measurements within the core of nuclear reactors and consisting of a non-fissionable emitter separated from a conducting collector by a solid dielectric insulator which can retain its high electrical resistivity when continuously exposed to intense radiation, the emitter and collector being connected to a load resistance for measurement of the current through the load resistance, the current being indicative of the intensity of the neutron flux.

3,375,371
METHOD OF AND APPARATUS FOR DETERMINATION OF NUCLEAR POISON

Karl H. Puechl, Pitcairn, Pa., assignor to Nuclear Materials and Equipment Corporation, Apollo, Pa., a corporation of Pennsylvania

Filed May 18, 1964, Ser. No. 368,315
4 Claims. (Cl. 250—83.3)

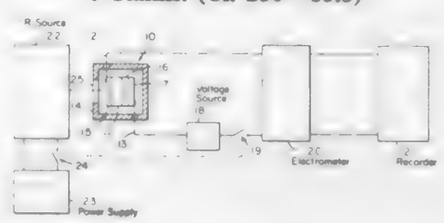


1. The method of non-destructive determination of the quantity of nuclear poison in a specimen, the poison in said specimen reacting with neutron fluxes in accordance with their energies, absorbing substantially completely neutron fluxes within a first energy range, passing substantially freely neutron fluxes within a second energy range, and partly abosrbing neutron fluxes in a third energy range, the said method comprising the steps of disposing said specimen between a source of neutrons including flux of said third energy range and a detector material which becomes radioactive when activated by neutrons and measuring the magnitude of radioactivity induced in said material by the resulting neutron flux in said third energy range emitted by said specimen.

3,375,372
PHOTO-STIMULATED RADIATION DOSIMETRY

Kazuo Miyashita, State College, Pa., assignor to the United States of America as represented by the United States Atomic Energy Commission

Filed Mar. 28, 1966, Ser. No. 538,917
4 Claims. (Cl. 250—83.3)

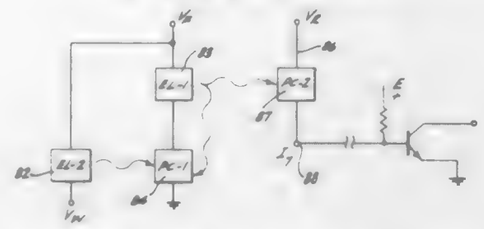


1. A method for measuring ionizing radiation dosage, comprising:
(a) applying an electric field and infrared light to a radiation sensitive crystal having a wide band gap, deep carrier traps and high charge carrier mobility;
(b) exposing said crystal to ionizing radiation in the absence of said electric field and said infrared light;
(c) applying an electric field and infrared light to said crystal; and
(d) measuring the amplitude of the resulting current transient.

3,375,373
SOLID STATE BISTABLE CIRCUIT

Donald H. A. Hageman, Los Angeles, Calif., assignor to Hughes Aircraft Company, Culver City, Calif., a corporation of Delaware

Filed Aug. 25, 1964, Ser. No. 391,957
6 Claims. (Cl. 250—209)



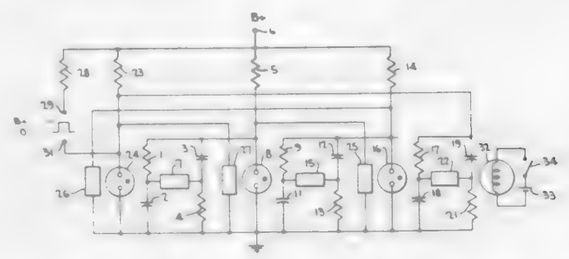
3. A bistable switch comprising: a bistable branch having an electroluminescent portion and a photoconductive portion each electrically and optically coupled to one another, said bistable branch having an input terminal and being adapted to have a first electrical signal of a predetermined magnitude applied thereacross from said input terminal; a write branch including an electroluminescent portion which is optically coupled to said photoconductive portion of said bistable branch, said write branch having an input terminal and being adapted to receive a second electrical signal applied thereto from an input terminal end, the other terminal end thereof being connected to the input terminal of said bistable branch whereby said electroluminescent portions of said write branch and said bistable branch are turned on by the application of the second electrical signal and said electroluminescent portion of said bistable branch is held on by the subsequent application of the first electrical signal; and means coupled to interrogate the state of said bistable branch.

3,375,374
PHOTO-ELECTRIC RING OSCILLATOR CIRCUIT WITH VOLTAGE DOUBLER

Wesley O. Niccolls, 7015 Centreville Road, Manassas, Va. 22110

Filed Sept. 24, 1965, Ser. No. 490,141
3 Claims. (Cl. 250—209)

A photo-electric oscillator comprising a number of identical stages connected in a ring, the output of each stage being connected to the input of the next stage. Each stage includes a resistance-capacitance-charging circuit, a light source and a photo-electric switch. The photo-electric switch is connected in the charging circuit in such a manner that, when the switch is caused to assume its low resistance state by light radiation from the light source in the preceding stage, the charging circuit becomes a voltage doubler. When this occurs, the voltage across the charging circuit exceeds the firing voltage of the light

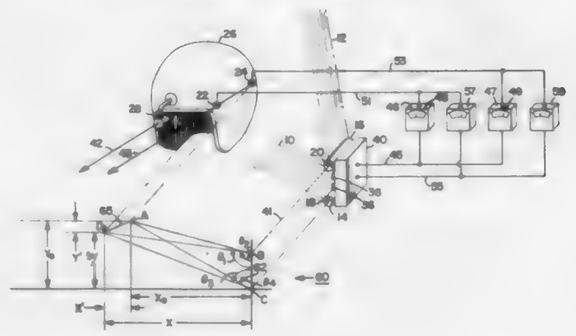


source connected to the charging circuit. The light radiated by the light source triggers the next succeeding stage in the oscillator, and the charging circuit discharges to the extinguishing voltage of the light source. An alternate embodiment includes another photo-electric switch placed across each light source and responsive to the light source in the next succeeding stage. When this photo-electric switch is actuated, it hastens the discharge of the light source to which it is connected making possible higher frequency operation.

3,375,375
ORIENTATION SENSING MEANS COMPRISING PHOTODETECTORS AND PROJECTED FANS OF LIGHT

Robert Abbey and David S. Lane, Minneapolis, Minn., assignors to Honeywell Inc., a corporation of Delaware

Filed Jan. 8, 1965, Ser. No. 424,252
7 Claims. (Cl. 250—216)



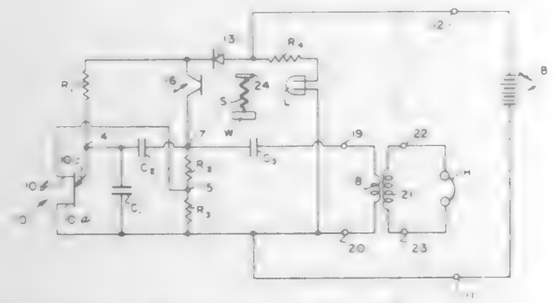
6. Apparatus to determine the direction of a man's line of sight relative to a vehicle in which he is moving comprising in combination:
first light detecting means;
second light detecting means;
means mounting said first and second detecting means on a man's head so that they move therewith;
means rotating a first planar fan of light about a first axis which is fixed to the vehicle;
means rotating a second planar fan of light about a second axis fixed to the vehicle, said second axis being substantially parallel to said first axis;
reference means;
means mounting said reference means to said vehicle;
means measuring the time of incidence of said first and second fans of light on said detecting means relative to the time when said first and second fans of light

are in a predetermined position relative to the vehicle as indicated by said reference means, said measuring means indicating the position of said first and second detecting means relative to the vehicle.

3,375,376
ANTI-INTRUDER DEVICE USING VIBRATION RESPONSIVE MEMBER BETWEEN LIGHT AND PHOTOCELL

David W. Kermode, China Lake, Calif., assignor to the United States of America as represented by the Secretary of the Navy

Filed Feb. 20, 1964, Ser. No. 346,357
3 Claims. (Cl. 250—231)

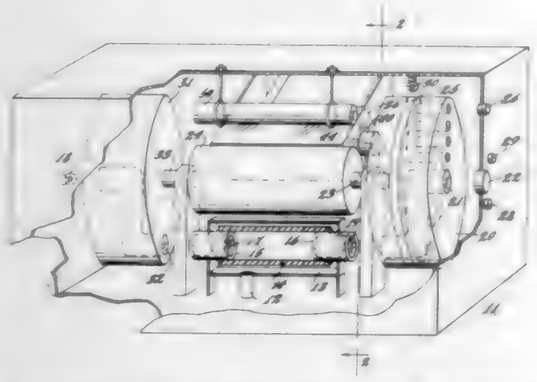


2. In a motion detection system, means including:
a unijunction transistor oscillator circuit for supplying an oscillating electrical output signal;
a continuous light emitting light source for producing a beam of light;
a light responsive device including an electrical current conducting variable resistance means disposed within the path of said beam so that the light beam may be caused to impinge thereon;
means adapted to vary the quantity of light of said beam impinging on said device in response to externally induced system vibrations; and
an electrical circuit including a voltage divider network and capacitance coupling means connecting said light responsive device with the oscillator circuit at the emitter electrode and one base electrode of the unijunction transistor for varying both amplitude and frequency of the oscillator output signal in response to induced system vibration.

3,375,377
RADIATION SENSITIVE MULTICHANNEL PRESSURE TRANSDUCER

Martin Ralph Barrows, N. Wales Road, North Wales, Pa. 19454

Filed Sept. 21, 1964, Ser. No. 397,874
2 Claims. (Cl. 250—231)

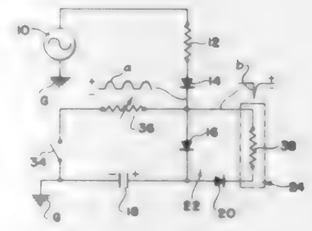


The pressure in a pressure chamber serves to expand or contract an elastomeric tube, which acts as a shutter regulating the amount of light passing from a uniform light source toward the photoelectric cell. A plurality of such elastomeric tube type of valves are parallel longitudinally around a cylindrical frame. A pair of scanning heads rotate to obtain a series of signals from the photocell responsive to the pressures in the respective pressure chambers of the valves. Optical rods of polymethacrylate control the direction of light from its source, through the elastomeric tube, and to the photocell.

3,375,378
PULSE FORMING CIRCUIT

James J. Vandemore, Geneseo, and Marvin E. Hines, East Moline, Ill., assignors, by mesne assignments, to E. W. Bliss Company, Canton, Ohio, a corporation of Delaware

Filed June 1, 1964, Ser. No. 371,263
14 Claims. (Cl. 307—107)

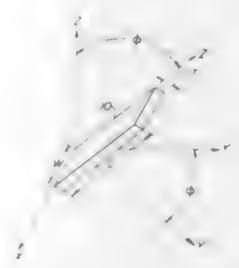


A circuit for developing a single output pulse from an energy source, such as a battery, or an alternating current voltage source for application to an output circuit, such as a resistor or a pulse transformer, and including energy storage means, such as a capacitor. This circuit means further includes passive element steering circuit means, such as two electrode, unidirectional current passing diodes, for steering energy from the source to the capacitor, with the diodes being so arranged to bypass the output circuit. A capacitor discharge circuit is provided which includes at least a portion of the output circuit. A switching means is provided in a discharge circuit for purposes of closing the discharge circuit so that a single voltage pulse is obtained across the output circuit.

3,375,379
ROTATED Y-CUT RECTANGULAR PIEZOELECTRIC QUARTZ CRYSTAL PLATES

James J. Royer, Allentown, Pa., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York

Continuation-in-part of application Ser. No. 402,488, Oct. 8, 1964. This application Apr. 16, 1965, Ser. No. 448,601
18 Claims. (Cl. 310—9.5)

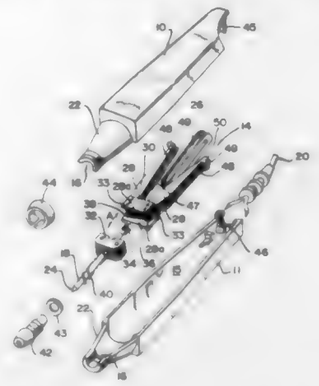


The specification describes rectangular DT-cut quartz crystals which are designed with optimum width-to-length and width-to-thickness ratios to minimize unwanted resonances.

3,375,380
RECIPROCATING MOTOR CORE STRUCTURE

Dhu Aine J. Davis, Wheaton, Ill., assignor to Hermetic Coil Co., Inc., a corporation of Connecticut

Filed Feb. 10, 1967, Ser. No. 615,102
3 Claims. (Cl. 310—29)

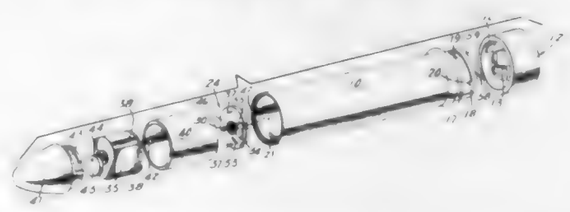


This invention relates generally to an electric vibratory tool and particularly to improvements in electrically operated etching tools.

3,375,381
CORDLESS ELECTRIC VIBRATOR FOR USE ON THE HUMAN BODY

Jon H. Tavel, Encino, Calif., assignor to Vibrex Corporation, Woodland Hills, Calif., a corporation of California

Filed June 30, 1966, Ser. No. 561,867
5 Claims. (Cl. 310—81)

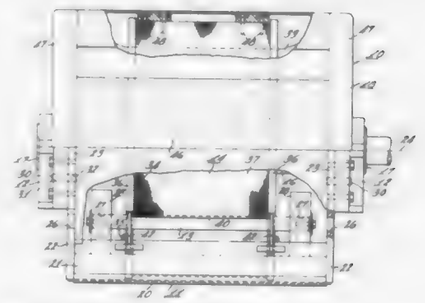


1. In a cordless electric vibrator for use on the human body having an elongated substantially cylindrical battery housing, at least one dry cell battery mounted within said housing and vibratory means operatively connected to said battery, an end cap removably and rotatably mounted on one end of said housing, said end cap acting to hold said battery within said housing and also acting as a switch to control the operation of said vibrator, said cap having a base and a circular side wall, at least one inwardly directed projection carried by the inside of said side wall, at least one L-shaped slot having an open vertical portion connected to a closed horizontal portion, said slot extending along the outer periphery of the end of said housing on which said end cap is mounted, said projection being slidably movable into the open vertical portion of said slot and along the horizontal portion thereof to removably mount said end cap on said housing, an elongated contact strip extending along the inside of said housing, said contact strip having one end thereof disposed adjacent to the end of said housing on which said end cap is mounted, a contact arm fixedly secured on the inside of the base of said end cap and rotatable therewith, said contact arm having at least one free end disposed adjacent to the circular side wall of said cap, said end of said contact strip and said contact arm being completely separate and independent from said projection and L-shaped slot, said contact arm being electrically connected to one of the contacts of said battery, said end cap being rotatable with respect to said housing to move said projection reciprocally along the horizontal portion of said slot and to simultaneously move said contact arm into and out of electrical contact with said end of said contact strip, the positioning of said projection with respect to the closed end of the horizontal portion of said L-shaped slot being so related to and coordinated with the positioning of said contact arm with respect to the end of said contact strip that when said projection engages the closed end of the horizontal portion of said L-shaped slot, said contact arm simultaneously engages the end of said contact strip, so that said end cap is in "on" position and cannot be rotated past said "on" position.

3,375,382
DYNAMOELECTRIC MACHINE

Richard H. Barber, Greendale, and Joseph T. McKean, New Berlin, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis.

Filed Jan. 13, 1965, Ser. No. 425,261
6 Claims. (Cl. 310—90)

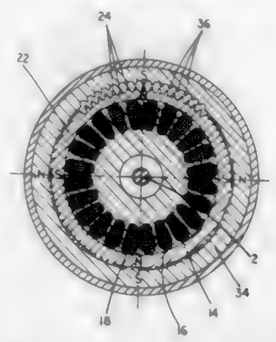


1. A motor comprising a base,
a pair of support members on said base,
a bearing bracket mounted on each end of said base, said bearing bracket being aligned and accurately positioned relative to said support members,
bearings in said bearing brackets,
a shaft rotatably mounted in said bearings and a motor rotor mounted on said shaft,
a motor stator having an annular core with windings positioned therein, the outer surface of said core having a pair of spaced apart grooves formed therein for fitting said support members to mount said stator on said base and automatically align said stator relative to said rotor to form a uniform air gap therebetween.

3,375,383
MAGNETIC DRIVE DEVICE

Kenneth W. Philbrick, Dayton, Ohio, assignor, by mesne assignments, to TRW Inc., Cleveland, Ohio, a corporation of Ohio

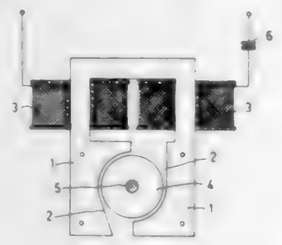
Filed Feb. 2, 1965, Ser. No. 429,872
6 Claims. (Cl. 310—103)



A magnetic drive device including a central core member of magnetic material which has slots in its outer surface and windings disposed therein. A magnetic yoke ring

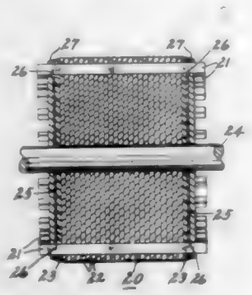
is placed on the outside of the core member and has a series of serrations on its exterior surface. The core is placed within a housing member which has a serrated ring of magnetic material on its inner surface, with the serrations of the ring and housing opposed to one another. The number of serrations on the yoke ring and housing are disimilar, so that when a rotating electromagnetic field is created in the yoke ring, the resulting flux will cause relative motion between the ring and the housing.

3,375,384
SYNCHRONOUS MOTOR HAVING PERMANENT MAGNETIC ROTORS
Richard Thees, Aachen, Germany, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 9, 1963, Ser. No. 315,009
Claims priority, application Germany, Oct. 18, 1962, N 22,229
13 Claims. (Cl. 310—156)



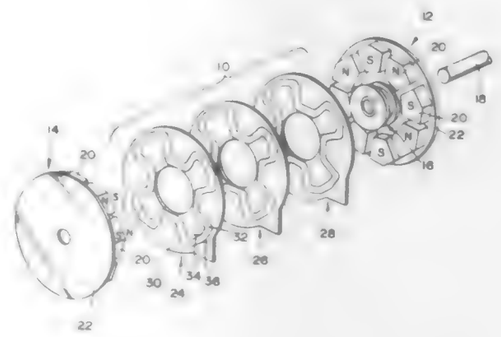
1. A synchronous motor comprising a stator composed of magnetic material, at least one stator winding mounted thereon, a permanent magnet rotor having at least one pair of poles and moutned to rotate within said stator, a pair of input terminals for supplying alternating current energy to said stator winding, said stator winding having an effective ratio of reactance X to resistance R between the values zero and five and greater than the value 4 minus $6.5\ E/U$, wherein X is the effective reactance and R is the effective resistance looking into the stator winding from said input terminals, E is the electromotive force induced in said stator winding and U is the A.C. terminal voltage at said input terminals, and wherein the ratio E/U lies between the values zero and 1.2.

3,375,385
ROTOR MEANS CONNECTION
Elmer L. Young, Englewood, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Feb. 4, 1965, Ser. No. 430,368
7 Claims. (Cl. 310—261)



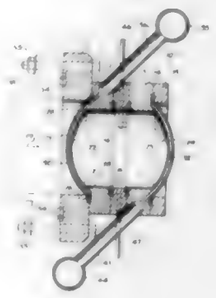
1. A dynamoelectric machine rotor means, comprising, an axially extending shaft portion, plural rotor laminations of magnetic material carried on said shaft portion and having substantially longitudinally extending passages located radially inwardly from outer periphery of said laminations, rotor conductor means carried in said passages of said laminations, and regions of solder that effectively join at least pairs of said laminations at both ends in locations axially separated by remaining laminations, said regions of solder also having short circuit contact for at least said pairs of laminations collectively at each end directly to said rotor conductor means.

3,375,386
PRINTED CIRCUIT MOTOR
Paul F. Hayner, Lexington, Mass., and Gerald L. Bernier, Nashua, N.H., assignors to Sanders Associates, Inc., Nashua, N.H., a corporation of Delaware
Filed Apr. 26, 1965, Ser. No. 450,843
10 Claims. (Cl. 310—268)



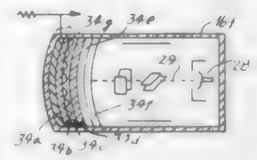
This invention pertains to a brushless alternating-current motor with a rotating field and having printed circuit disks for a stationary armature. The apparatus disclosed is a motor that is driven by a variable frequency source to control the speed thereof. The magnetic field is developed axially by permanent magnets of opposite polarity that are mounted for rotation together on an axis and spaced apart in the direction of the axis to provide a gap of substantially constant magnetic flux. The printed circuit armature is axially disposed within the gap.

3,375,387
FLUID COOLED MULTI-FOIL RADIATION BEAM WINDOW FOR HIGH POWER BEAM TUBES
James E. Leiss, Gaithersburg, Samuel Penner, Potomac, and John L. Pararas, Rockville, Md., assignors to the United States of America as represented by the Secretary of Commerce
Filed Jan. 24, 1967, Ser. No. 611,478
5 Claims. (Cl. 313—44)



A four metal foil window with water forced between the first and second and between the third and fourth foils, and helium maintained under pressure between the second and third foils.

3,375,388
VACUUM TUBES PROVIDED WITH LIGHT CONDUCTING MEMBERS AND WITH A SCREEN OF A HIGH PHOTOELECTRIC SENSITIVITY
Edward Emanuel Sheldon, 30 E. 40th St., New York, N.Y. 10016
Continuation-in-part of application Ser. No. 158,638, Dec. 4, 1961, now Patent No. 3,279,460, dated Oct. 18, 1966. This application Aug. 6, 1964, Ser. No. 387,961
17 Claims. (Cl. 313—65)



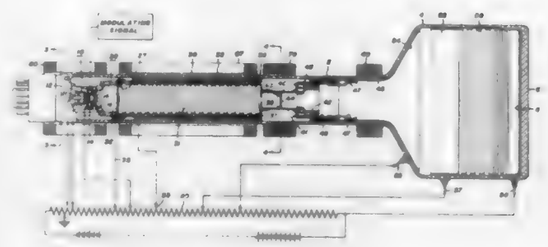
This invention relates to novel vacuum tubes provided with members conducting light by internal reflection in said members and provided also with a novel photoemissive screen, comprising a plurality of alkali metals different from each other.

In addition in some vacuum tubes the light conducting members have the construction in which the external surface of their sidewalls is made very smooth in order to prevent the escape of light from one of said members to another member. These vacuum tubes exhibit a much greater sensitivity than devices of the prior art and are capable of a higher resolution of images.

3,375,389
ADJUSTABLE CONVERGENCE MAGNETS
Richard H. Hughes, Lancaster, Pa., assignor to Radio Corporation of America, a corporation of Delaware
Filed Mar. 15, 1965, Ser. No. 439,599
8 Claims. (Cl. 313—77)

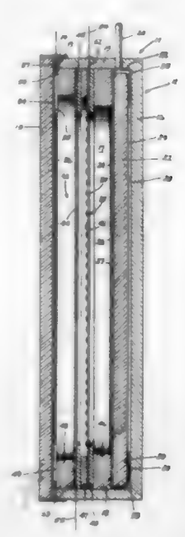
2. In combination,
a cathode ray tube having a neck enclosing the paths of a trio of individual cathode ray beams, said trio of beam paths being symmetrically disposed about the longitudinal axis of said tube neck;
and means for producing a plurality of magnetic fields intersecting said paths, the orientation of the magnetic field intersecting at least one of said paths differing from the orientation of the magnetic fields intersecting the remainder of said paths so as to shift the position of one of said beams in a direction different from the direction of beam shift of the remainder of said beams, said plurality of fields being conjointly adjustable in magnitude and in sense;
said field producing means including a magnet ring having a magnetization pattern comprising a trio of north poles equally spaced about the ring periphery and a corresponding trio of south poles in respective equally spaced positions about said periphery symmetrically intervening between adjacent ones of said north poles, said ring being mounted on said cathode ray tube neck so as to encircle said beam paths.

3,375,390
ELECTRON OPTICAL SYSTEM HAVING SPIRAL COLLIMATING ELECTRODE ADJACENT THE TARGET
Kurt Schlesinger, Fayetteville, N.Y., assignor to General Electric Company, a corporation of New York
Filed Jan. 3, 1966, Ser. No. 518,160
8 Claims. (Cl. 313—83)



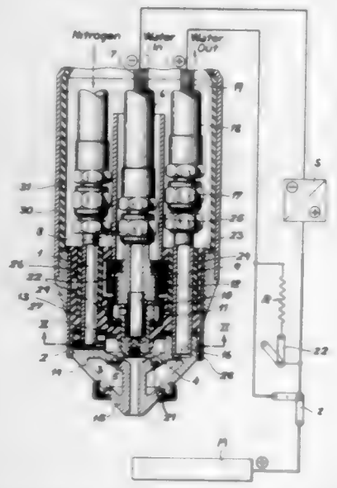
An electron optical system arranged in coaxial relation along a reference axis comprising an electron beam source, a target spaced from said source, and a nonlinear spiral collimating electrode of increasing electrical resistance per unit axial length adjacent said target.

3,375,391
THIN IMAGE TUBE ASSEMBLY
Cyril L. Day, Huntington, Ind., assignor to International Telephone and Telegraph Corporation, Nutley, N.J., a corporation of Maryland
Filed July 22, 1965, Ser. No. 474,066
3 Claims. (Cl. 313—95)



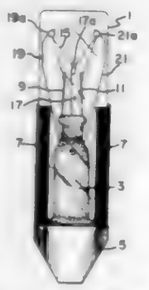
A thin image tube assembly and mounting includes a display screen at one end of a cylindrical envelope and a faceplate having a photoconductive screen at the other end. Annular insulating spacers positioned along the inner surface of the tube abut and support two intermediate mesh screens. The spacer adjacent the photoconductive screen is flush with the edge of the envelope and a metal ring forms a seal between the faceplate, envelope and spacer to retain the elements in position. Close spacing between the two ends permits proximity focusing of an image onto the display screen.

3,375,392
PLASMA GENERATOR UTILIZING A RIBBON-SHAPED STREAM OF GAS
Wojciech Brzozowski, ul. Kniers 23/31 m. 72, and Janusz Reda, pl. Henkla 6 m. 19, both of Warsaw, Poland
Continuation of application Ser. No. 437,745, Mar. 8, 1965. This application Apr. 26, 1967, Ser. No. 634,005
Claims priority, application Poland, Mar. 7, 1964, P 103,947
4 Claims. (Cl. 313—231)



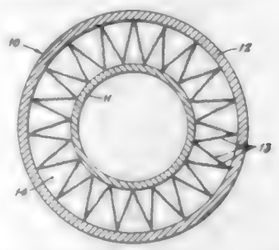
A plasma torch having a central electrode surrounded by an annular gas chamber with an axial outlet in line with the central electrode and a nozzle tangentially entering the chamber for admitting a gas tangentially into the latter. The nozzle has a narrow slot in a radial plane of the annular electrode so that the gas is discharged in a flat ribbon into the chamber.

3,375,393
INCANDESCENT LAMP
Robert G. Morgan, Ipswich, Mass., assignor to Sylvania Electric Products Inc., a corporation of Delaware
Filed Oct. 22, 1963, Ser. No. 317,921
2 Claims. (Cl. 313—269)



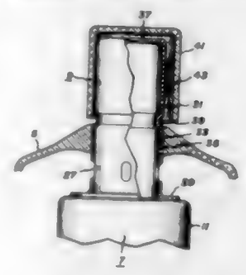
2. An incandescent electric lamp comprising: a substantially tubular glass envelope; a lamp stem disposed within and hermetically sealed in said envelope at one end thereof; a pair of lead-in wires sealed in said stem and extending therethrough; a lamp filament, the ends of which are secured to the inner ends of said lead-in wires, a plurality of filament support wires, one end of each of which being anchored in said stem, the other end of each of which being looped about said lamp filament intermediate the ends thereof, and each of said filament support wires frictionally engaging the inner wall of said envelope intermediate the ends thereof; and a base-contact assembly secured to said envelope at the stem end thereof said assembly comprising a wedge-like member of insulating material and a pair of metal clips supported in said wedge-like member of insulating material, the outer ends of said lead-in wires being connected to said metal clips.

3,375,394
MULTIFILAMENT LIGHT
Philip C. Demarest, Pine Brook, and Karl Karlson, Wallington, N.J., assignors to Ohmega Laboratories, Pine Brook, N.J., a corporation of New Jersey.
Filed May 6, 1966, Ser. No. 548,192
4 Claims. (Cl. 313—316)



1. A light having first and second spaced conductive walls; two end walls joining the spaced walls, one of said end walls at each end of said spaced walls, respectively; and a plurality of groups of filaments, stretching from one of said walls to the other and being joined at each of said walls.

3,375,395
ELECTRON DISCHARGE DEVICE
Cletus E. Maier, Cannelton, Ind., assignor to General Electric Company, a corporation of New York
Filed Apr. 12, 1965, Ser. No. 447,422
10 Claims. (Cl. 313—318)



This invention proposes an electric discharge device which comprises an envelope, a cathode assembly supported in one end of the envelope, and an anode assembly supported in the other end of the envelope. The anode assembly includes a tubular top cap of relatively thin conductive material which extends through and is sealed in one end wall of the envelope. The top cap has an external contact portion with a distortion blocking circumferential groove located adjacent the envelope wall. Preferably the groove is of semicircular cross-sectional shape, with a depth to material thickness ratio of approximately 2 to 1 and a width to depth ratio of approximately 3 to 1.

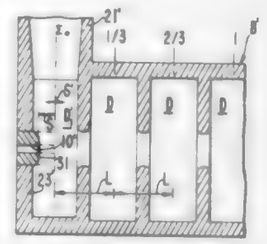
3,375,396
ACCELERATION METHOD AND APPARATUS
Jacob Haimson, Palo Alto, and Craig S. Nunan, Los Altos Hills, Calif., assignors to Varian Associates, Palo Alto, Calif., a corporation of California
Filed Oct. 29, 1965, Ser. No. 505,630
4 Claims. (Cl. 315—3.5)

1. A traveling wave linear accelerator comprising, in combination: a disc loaded waveguide including a plurality of cavity resonators arranged for passage of a particle beam from an input end of said waveguide therethrough to an output end for interaction with and acceleration by a traveling radio frequency electromagnetic wave propagating therethrough, each of said cavity resonators defined by a hollow cylindrical wall and apertured input and output discs closing the opposite ends of said wall, the apertures in said discs centered substantially axially of said waveguide for passing the particle beam

through each of said cavity resonators in said waveguide and coupling electromagnetic energy between cavity resonators for propagating said traveling radio frequency electromagnetic wave along said waveguide, substantially every cavity beyond the first cavity resonator at the input end of said waveguide proportioned so that the distance L from the cavity transverse mid-plane to the transverse mid-plane of an adjacent cavity resonator is determined by the formula:

$$L=\frac{\beta_w\lambda}{N}$$

where β_w is v_p/c, λ is the free space wavelength of the traveling electromagnetic wave, N is the number of said discs axially of said waveguide per wave length λ, v_p is the phase velocity of the traveling electromagnetic wave along such waveguide and c is the velocity of light; means



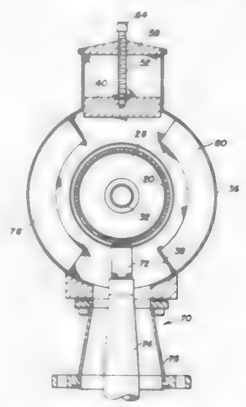
for coupling a radio frequency electromagnetic wave into said first cavity resonator for setting up substantial electromagnetic fields in said first cavity resonator and establishing a traveling radio frequency electromagnetic wave propagating along said waveguide; and means for directing the particle beam into said first cavity resonator for passage along said waveguide, said first cavity resonator constructed such that the distance s from the location at which the particles of said particle beam are first subjected to said fields within said first cavity resonator to the nearest plane which is spaced the distance L from the transverse mid-plane of the second cavity resonator of said waveguide is determined by the formula:

$$0\leq s<\frac{\beta_w\lambda}{2N}$$

3,375,397
EXTENDED INTERACTION KLYSTRON HAVING INDUCTIVE COUPLING MEANS COMMUNICATING BETWEEN ADJACENT CAVITY RESONATORS
William Jared Leidigh, Belmont, and Donald H. Preist, Mill Valley, Calif., assignors, by mesne assignments, to Varian Associates, a corporation of Delaware
Filed Apr. 30, 1964, Ser. No. 363,900
10 Claims. (Cl. 315—5.46)

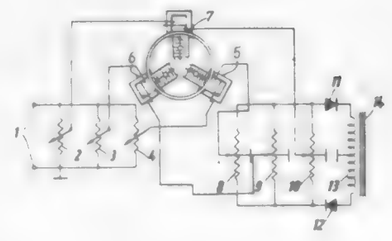
A high power microwave linear beam amplifier tube is disclosed. The tube includes an input circuit coupled to the electron beam and excited with a microwave signal to be amplified. The microwave signal velocity modulates the beam and the modulated beam passes into an extended interaction output circuit which is excited by the bunched beam to produce an amplified output signal. A depressed collector structure collects and dissipates the energy of the beam after passage through the output circuit.

The extended interaction output circuit comprises a plurality of cavity resonators successively arranged along the beam. Each cavity resonator includes an interaction gap for interaction with the electron beam passable therethrough. Inductive coupling means communicate between adjacent cavity resonators to form a composite inductively coupled output cavity resonator structure. In a preferred embodiment, the inductive coupling means, communicating between adjacent cavity resonators, comprises elongated coupling slots communicating through a common wall structure between adjacent resonators with the coupling slots being disposed near the periphery of the coupled cavities. In one embodiment of the present in-



vention, an extended interaction composite cavity resonator is disposed between the input circuit and the output circuit to serve as a buncher cavity for amplifying signal energy on the beam. The spacing between the successive interaction gaps of the composite buncher cavity is preferably greater than the spacing between successive interaction gaps of the output circuit.

3,375,398
MULTI-BEAM CONVERGENCE SYSTEM
Rolf Ohlhorst, Hildesheim, Germany, assignor to Blaupunkt-Werke, GmbH, Hildesheim, Germany
Filed Sept. 9, 1964, Ser. No. 395,232
Claims priority, application Germany, Sept. 18, 1963, B 73,551
20 Claims. (Cl. 315—13)

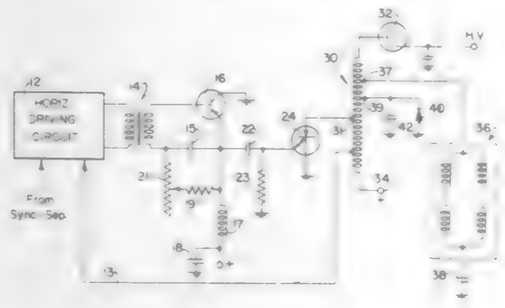


An apparatus for allowing separate, independent convergence adjustments for each edge of the picture frame of a color television receiver. A second correction current derived from the respective deflection circuits is superimposed on the first parabolic correction current in each of the correction magnet coils, such that the second current affects the first current only during one-half of the frame or line deflection, and is zero during the other half of the frame or line deflection.

3,375,399
TELEVISION SWEEP CIRCUIT USING GATE CONTROLLED SWITCHES
Lowell S. Kongable, Prospect Heights, Ill., assignor to Motorola, Inc., Franklin Park, Ill., a corporation of Illinois
Filed May 19, 1964, Ser. No. 368,479
6 Claims. (Cl. 315—27)

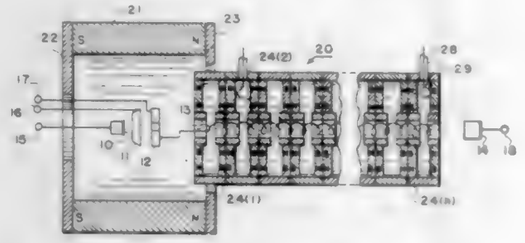
A sweep signal generator for a cathode ray beam includes a bistable switch device for conducting current

into a deflection yoke so a sawtooth deflection signal is developed therein. The switching device is triggered into



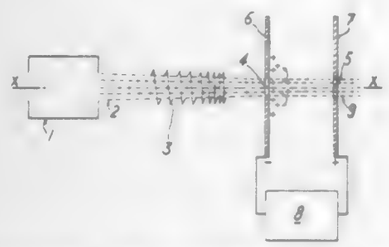
conduction and triggered out of conduction by signals synchronized with the television synchronizing signals.

3,375,400
RADIAL MAGNET BEAM FOCUSING SYSTEM
Dale A. Schrumpf, Mountain View, Calif., assignor to General Electric Company, a corporation of New York
Filed Nov. 2, 1964, Ser. No. 408,085
5 Claims. (Cl. 315—3.5)



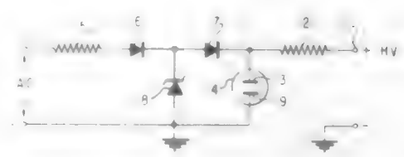
A magnetic system for a traveling wave tube comprising a series of abutting cells of alternating magnetic polarity wherein each cell includes a pair of annular magnets of opposite magnetic polarity.

3,375,401
SOURCE OF NEGATIVELY CHARGED PARTICLES HAVING POSITIVELY CHARGED PARTICLE RETAINING MEANS
Terenzio Consoli, La Celle-Saint-Cloud, and Richard Geller, Antony, France, assignors to Commissariat à l'Energie Atomique, Paris, France
Filed Sept. 30, 1965, Ser. No. 491,700
Claims priority, application France, Oct. 14, 1964, 991,422
2 Claims. (Cl. 315—111)



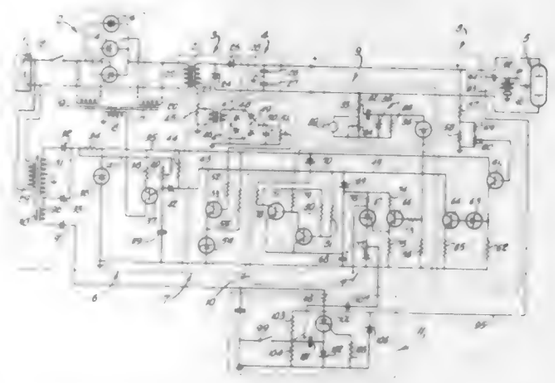
An accelerated jet of positively and negatively charged particles is passed through a coil generating a magnetic field parallel to the long axis of the jet and having its intensity increasing in the direction of flow to diverge positively charged particles. The jet then passes through spaced parallel plates having openings in the cross-section of the jet with the upstream plate negatively charged and the downstream plate positively charged so that the upstream plate captures positively charged particles.

3,375,402
NEON LAMP WARNING CIRCUIT
Alan F. Houghton, Dunedin, Fla., assignor to General Electric Company, a corporation of New York
Filed Apr. 16, 1965, Ser. No. 448,798
4 Claims. (Cl. 315—176)



A neon lamp indicates energization of a high D.C. voltage source. A separate power supply, including an alternating current source and a zener diode, supplies a pulsating voltage to the neon lamp of a value above that needed to sustain ionization but slightly below that needed to initiate ionization so that when the high D.C. voltage is energized, the addition of a small pre-ionizing voltage developed from the high D.C. voltage source ionizes the lamp. In alternate embodiments, either positive or negative senses of the high D.C. voltage source can be indicated.

3,375,403
ELECTRICAL SYSTEM FOR DISCHARGE DEVICE
Robert A. Flieder, Fords, N.J., assignor to Berkey Photo, Inc., New York, N.Y.
Filed Oct. 4, 1965, Ser. No. 492,628
10 Claims. (Cl. 315—240)

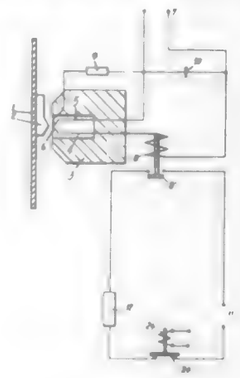


An electrical system including a gas discharge tube and a capacitor supplying the tube. Circuitry is included for charging the main capacitor at a linear rate. A control bus is provided mantained at a predetermined potential, means monitoring the charging current and voltage of the capacitor, control voltage dropping means for the main bus as does a holdover circuit preventing charging of the capacitor above a predetermined rate until time has passed for the deionization of the discharge tube.

3,375,404
CONTROL CIRCUIT FOR MACHINE TOOL HAVING CAM OPERATED ELECTRONIC SWITCH MEANS
Ivo Martinides, Neuhausen am Rheinfall, Switzerland, assignor to Georg Fischer Aktiengesellschaft, Schaffhausen, Switzerland
Filed Jan. 12, 1965, Ser. No. 425,007
Claims priority, application Switzerland, Jan. 22, 1964, 694/64
3 Claims. (Cl. 315—360)

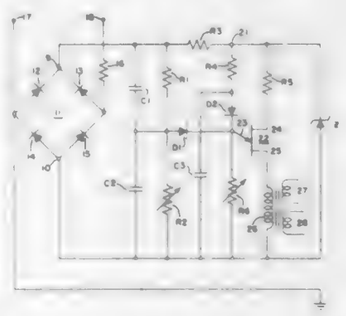
Control circuit for machine tool in which an electronic switch adapted for operation by the proximity thereto of a cam is provided with the cam adjustably mounted on

one element of a machine tool and the switch mounted on another element of the machine tool with the elements



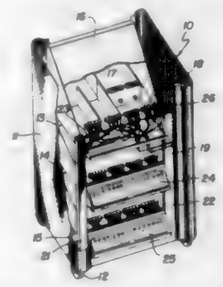
of the machine tool being relatively movable so that the cam passes close by the electronic switch.

3,375,405
CIRCUIT FOR REMOVING VOLTAGE SURGES FROM POWER LINES
Christopher Chiffee Fallon and Richard C. Weischedel, Oklahoma City, Okla., assignors to General Electric Company, a corporation of New York
Filed July 20, 1965, Ser. No. 473,379
4 Claims. (Cl. 317—16)



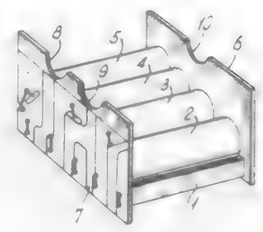
A circuit is disclosed for removing voltage surges by momentarily shunting them from the line. The shunt path for the voltage surges includes a resistor having a negative characteristic of current versus resistance, this resistor being connected in series with a pair of gate controlled rectifiers connected reversely in parallel. A firing circuit for the gate controlled rectifiers includes a uni-junction transistor through which triggering energy is connected to the gate controlled rectifiers.

3,375,406
ELECTRICAL HARNESS
Milton Alden, Needham, Mass., assignor to Alden Research Foundation, Westboro, Mass., a corporation of Massachusetts
Filed Jan. 7, 1966, Ser. No. 519,221
9 Claims. (Cl. 317—99)



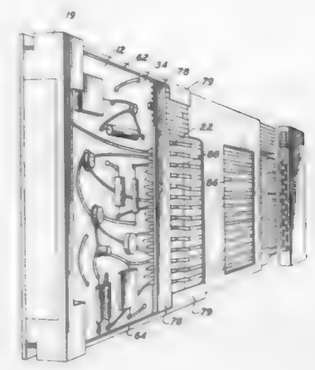
This invention relates to an electrical harness and, more particularly, to apparatus for carrying, segregating, and identifying wiring in a multi-level electrical cabinet.

3,375,407
ELECTRONIC MOUNTING UNIT HAVING SPACED PLATE ELEMENTS SUPPORTED IN POSITION
Gerd Rosenstand, Copenhagen, Denmark, assignor to Danavox International A/S, Copenhagen, Denmark
Filed July 22, 1965, Ser. No. 474,046
Claims priority, application Denmark, Mar. 26, 1965, 1,577/65
7 Claims. (Cl. 317—101)



An electronic mounting unit comprises a pair of spaced parallel plate elements each having holes formed therethrough. A plurality of electronic components is positioned between the plate elements and each has electrical terminals extending therefrom through corresponding ones of the holes formed through the plate elements and affixed in electrical contact with the plate elements. A support and spacing component comprises a rigid housing of box-like configuration with electronic circuitry enclosed within the housing. The housing is positioned between the plate elements with a pair of spaced parallel planar sides thereof abutting the plate elements.

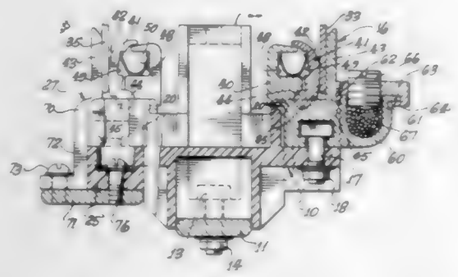
3,375,408
TEST FIXTURE FOR KEYED PRINTED CIRCUIT BOARD
Frederick G. Buhrendorf, Colts Neck, and Oskar Loosme, Lincroft, N.J., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Nov. 15, 1965, Ser. No. 507,784
5 Claims. (Cl. 317—101)



A rigid universal extender hold a printed-circuit card longitudinally outward from a mounting panel to expose the card's circuit for test. The cards have edges keyed with notches to receive protuberances extending only from their respective jacks on the panel. Printed-circuit wiring on the extender connects the jack to the card. Longitudinally-movable fingers separate from the wiring and pro-

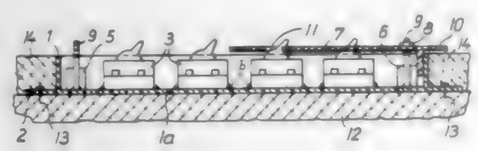
jecting beyond the printed wiring adjust themselves to the position of the notches on the card tested and thereby allow the extender to fit only into the panel jack belonging to that card.

3,375,409
MOUNTING TERMINAL WITH FIXED AND MOVING RIGID JAW MEMBERS
Rex E. Sturdivan, Whittier, Calif., assignor to Zinsco Electrical Products, Los Angeles, Calif., a corporation of California
Filed Aug. 9, 1965, Ser. No. 478,300
3 Claims. (Cl. 317—104)



A meter mounting terminal with extruded fixed and moving rigid jaw members and a spring for applying clamping pressure. An open top lug design permitting laying in of cable. A unitary construction omitting contact surfaces except at the meter stab and the cable.

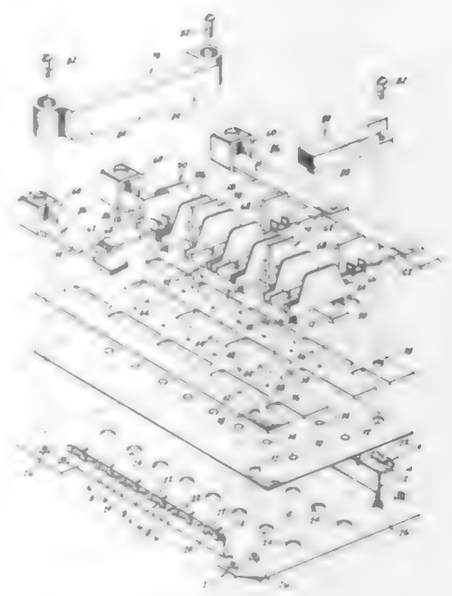
3,375,410
DISTRIBUTION PANEL FOR RELATIVELY THIN ELECTRICAL COMPONENTS
Erwin Schimmeister, Fischbeck uber Hameln, Germany, assignor to Allgemeine Elektricitats-Gesellschaft, Berlin, Germany
Filed Feb. 15, 1967, Ser. No. 616,218
5 Claims. (Cl. 317—119)



A distribution panel which is as thin as a layer of plaster is provided for mounting circuit breakers, bell transformers, and the like on a wall without the necessity of recessing the distribution panel into the wall. The cover plate for the distribution panel has removal portions which serve as apertures for the handles of switches contained therewithin.

3,375,411
ELECTRICAL CIRCUIT CONTROL DEVICE PANEL BOARD WITH NOVEL INSULATING MEANS
Joseph J. Mrowka, Plainville, Conn., assignor to General Electric Company, a corporation of New York
Filed July 3, 1967, Ser. No. 650,671
11 Claims. (Cl. 317—119)

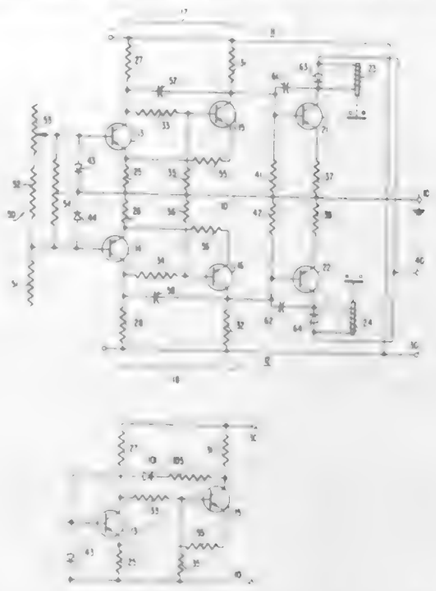
There is disclosed an electrical circuit control device panel board wherein the base or saddle has a generally planar portion upon which are disposed a first layer of insulating material, a second layer of insulating material and a plurality of conductors extending in substantially parallel spaced relationship. The second layer of insulating material has a plurality of apertures therein underlying each of the conductors and spaced along the length thereof with the apertures being dimensioned and disposed with respect to the conductors so that they extend beyond the side margins of a conductor toward the adjacent conductor. The webs between apertures underlying one of the conductors are offset along the length of the conductors from the webs between apertures underlying the adjacent conductors whereby the distance for travel along the upper surface of the second layer between adjacent conductors is increased substantially.



In the preferred embodiment, the layers of insulating material are provided by sheets which are punched or otherwise formed with the desired apertures or cutouts therein. An insulating member bridges one of the conductors and a contact arm having an end attached to another conductor extends normally to that conductor with its other end disposed on the insulating member. To provide sufficient insulated surface between the contact arm and the conductor underlying the insulating member, side wall portions are provided upon the insulating member. The insulating member desirably has upstanding ribs on the upper surface thereof providing a channel seating the contact arm and may be of sufficient width to provide a pair of channels seating a pair of contact arms with an upstanding center wall portion being disposed between the channels to provide an insulated barrier therebetween. To position the insulating member, desirably the second layer of insulating material has apertures formed therein to opposite sides of the conductor and the insulating member has cooperatively located feet thereon which seat in the apertures.

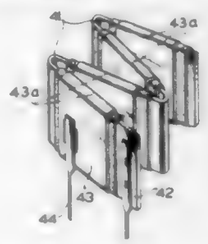
3,375,412
SWITCHING CIRCUITS
Richard J. Bridges, Baltimore, Md., assignor to Koppers Company, Inc., Pittsburgh, Pa., a corporation of Delaware
Filed Dec. 14, 1964, Ser. No. 417,923
16 Claims. (Cl. 317—148.5)

A bidirectional switching circuit comprising three cascaded transistors and including means for preventing relay chatter, the means including capacitors connected between the collector electrodes of successive transistors to reduce the A.C. gain of the system and to introduce a time constant which will prevent operation of the circuit at the ripple frequency of a rectified, unfiltered voltage input. In lieu of the capacitor connected between the collector electrodes, a resistor and a diode may be connected



in series between the collector electrode of the second transistor and the base electrode of the first transistor.

3,375,413
ELECTROLYTIC CAPACITOR COMPRISING FILM-FORMING METAL SHEET CARRYING A DIELECTRIC OXIDE FILM AND A METAL DIOXIDE ELECTROLYTE LAYER
Klaus Brill, Stuttgart, Germany, assignor to Robert Bosch GmbH., Stuttgart, Germany
Filed June 8, 1965, Ser. No. 462,248
Claims priority, application Germany, June 12, 1964, B 77,221
17 Claims. (Cl. 317—230)

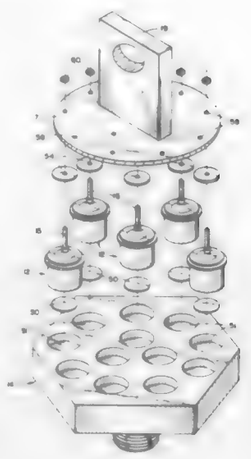


A dry electrolytic capacitor having an anode of film-forming metal including a dielectric oxide film thereon and a pyrolytically reducible oxide layer on the film is produced by heating said anode and dielectric film to a temperature within the range of 100–450° C., and spray depositing, on the thus heated dielectric film, a finely divided liquid solution of a metal salt pyrolytically decomposable, at the temperature of said heating, to a pyrolytically reducible oxide for in situ producing a homogeneous electrolyte-reducible oxide layer on said dielectric film.

3,375,414
CAPACITOR WITH SODIUM FORMATE ELECTROLYTE
Charles E. Welch, Jr., Williamstown, Mass., assignor to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts
No Drawing. Filed Oct. 8, 1965, Ser. No. 494,256
3 Claims. (Cl. 317—230)

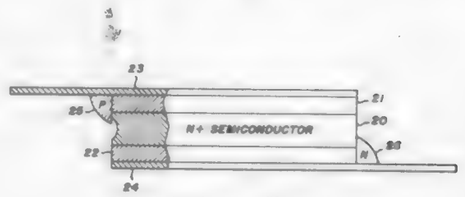
An electrolytic capacitor wherein the electrolyte is sodium formate dissolved in 5–70% by weight ethylene glycol monomethyl ester and 30–95% by weight a comparible electrolyte solvent.

3,375,415
HIGH CURRENT RECTIFIER
George B. Finn, Jr., Scottsdale, Ariz., assignor to Motorola, Inc., Franklin Park, Ill., a corporation of Illinois
Filed July 17, 1964, Ser. No. 383,429
5 Claims. (Cl. 317—234)



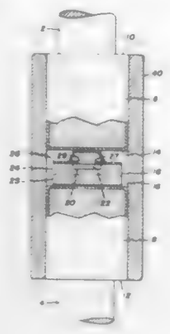
1. A semiconductor rectifier comprising a plurality of matched unit cells, said unit cells each having for electrical connections a cap and an extending wire terminal, a metal base with a plurality of recesses into which are soldered said caps of said unit cells, said metal base equipped with a mounting means to facilitate making electrical and thermal connection to said base, a metal connector with apertures respectively aligned with said recesses and into which are soldered said wire terminals, and a terminal means other than the said wire terminals of said unit cells attached to said connector for making electrical connection to said connector.

3,375,416
SEMICONDUCTOR TUNNEL DIODE DEVICE
Norbert Adams, Syracuse, Tapan Mukerjee, North Syracuse, and James M. Smith, Liverpool, N.Y., assignors to General Electric Company, a corporation of New York
Original application Mar. 16, 1962, Ser. No. 180,164, now Patent No. 3,297,920, dated Jan. 10, 1967. Divided and this application Mar. 14, 1966, Ser. No. 555,659
3 Claims. (Cl. 317—234)



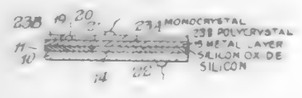
Semiconductor tunnel diode consisting of a pellet of first conductivity type semiconductor material sandwiched between two insulating members, with a body of opposite conductivity type inducing activator material supported by one insulating member and fused thereto and to a surface of the semiconductor pellet exposed between the insulating members to form a small area PN junction. Another body of first conductivity type inducing activator material is fused to the second insulating member and to the semiconductor pellet, and respective contacts are connected to the respective bodies of activator material.

3,375,417
SEMICONDUCTOR CONTACT DIODE
Clifford O. Hull, Jr., Baldwinsville, and Alexander M. Intrator, De Witt, N.Y., assignors to General Electric Company, a corporation of New York
Continuation of abandoned application Ser. No. 394,456, Sept. 4, 1964. This application Dec. 7, 1966, Ser. No. 599,985
7 Claims. (Cl. 317—234)



A semiconductor contact diode comprises a pair of spaced, opposed, metallic electrodes enclosed within a hermetically sealed, glass, cylindrical casing and separated by a silicon semiconductor pellet containing both P and N regions so as to form a P-N junction. The P region of the pellet abuts an epitaxially formed, monocrystalline contact button through an aperture in a passivating layer which overlies a first major face of the pallet at the P region. The contact button is in turn connected to one of the metallic electrodes through a solder coating. The N region is connected to the other of the metallic electrodes through a soldered coating overlying the second major face of the semiconductor pellet.

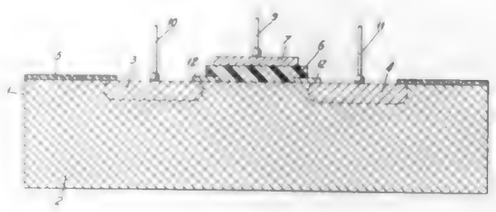
3,375,418
S-M-S DEVICE WITH PARTIAL SEMICONDUCTING LAYERS
Richard R. Garnache, Clarksburg, and Ferdinand Lincoln Vogel, Jr., Williamstown, Mass., assignors to Sprague Electric Company, North Adams, Mass., a corporation of Massachusetts
Filed Sept. 15, 1964, Ser. No. 396,694
6 Claims. (Cl. 317—235)



A device having a thin metallic layer between composite layers, each of which contains a non-crystalline semiconductive material and a non-conductive material or polycrystalline material.

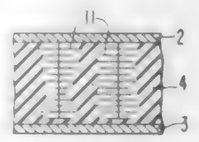
3,375,419
FIELD EFFECT TRANSISTOR WITH POLY-p-XYLYLENE INSULATED GATE STRUCTURE AND METHOD
Johann S. Wagener, Lakewood, Robert L. Shepard, Cleveland Heights, and Russell D. Westbrook, Fairview Park, Ohio, assignors to Union Carbide Corporation, a corporation of New York
Filed Feb. 25, 1965, Ser. No. 435,124
15 Claims. (Cl. 317—235)

1. A semiconductor device comprising a body of semiconductive material of one conductivity type and including a first source region and a second spaced-apart drain region thereon, said first and second regions being of a conductivity type opposite to that of the body of semiconductive material, a film of para-xylylene polymer disposed over at least a portion of the area between the spaced-



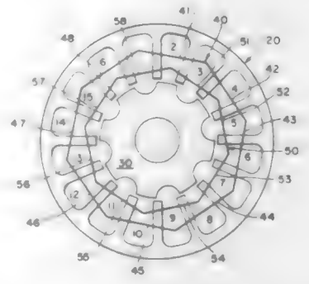
apart first and second regions, and a gate electrode overlying at least a portion of the para-xylylene polymer film and insulated from the semiconductor body.

3,375,420
RARE EARTH FLUORIDE CAPACITORS
Arden Sher and Raymond Solomon, Sunnyvale, Calif., assignors to Varian Associates, Palo Alto, Calif., a corporation of California
Filed Aug. 8, 1966, Ser. No. 571,097
4 Claims. (Cl. 317—258)



An electric capacitor is disclosed employing a lanthanum series rare earth fluoride dielectric material. The dielectric material is preferably a trifluoride substance including a multitude of metallic dendrites extending in a direction from one of the electrodes of the capacitor toward the other one of the electrodes for increasing the capacitance of the capacitor. In a preferred embodiment, the dielectric is preferably made of a single crystal of hexagonal configuration oriented with its C-axis extending in a direction which is not perpendicular to both electrodes. A method for growing the dendrites in the single crystal dielectric material is disclosed wherein a static voltage in excess of 10 volts is applied across the electrodes of the capacitor for a time in excess of a few hours.

3,375,421
COMBINED TORQUER AND PICKOFF MEANS
Dan L. Ve Nard, Grand Rapids, Mich., assignor to Lear Siegler, Inc.
Filed Apr. 21, 1964, Ser. No. 361,506
13 Claims. (Cl. 318—18)



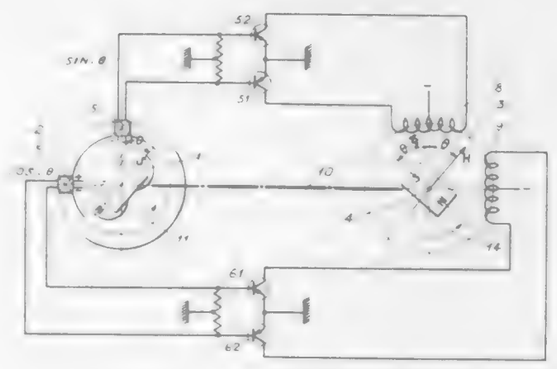
Basically, the subject invention provides a variable reluctance device for the simultaneous performance of both torquer and pickoff functions from the same set of wind-

ings. A rotor and a stator are provided upon each of which is formed a peripheral series of alternating teeth and slots, or spaces, between the teeth. A series of turns of a primary winding are wound, e.g., upon the stator within the slots and about the teeth thereupon to effect a series of magnetic poles. A series of turns of a secondary winding are also wound, e.g., upon the stator to effect a similar result.

An AC signal is supplied to the primary winding and, in turn, induces a signal in the secondary winding dependent upon the shape and intensity of the flux in the fields associated with the magnetic poles. The shape and intensity of this flux is, in turn, altered by movement of the rotor relative to the stator and hence such relative movement of the stator and rotor is reflected in the induced signal in the secondary winding.

The winding insertion scheme for winding the primary and the secondary within the slots includes a unique arrangement whereby center taps appear in the windings. These center taps are connected to either AC or DC sources for providing the torquing function. Further, the two portions of each of the center tap windings form adjacent arms within bridge networks, which may, if desired, be balanced to thereby isolate the sources of torquing voltage from the pickoff signals.

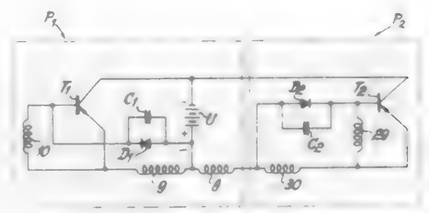
3,375,422
HALL EFFECT D.C. MOTOR
Alexandre Boudigues, Paris, France, assignor to CSF—Compagnie Generale de Telegraphie Sans Fil, a corporation of France
Filed Dec. 22, 1964, Ser. No. 420,420
Claims priority, application France, Dec. 23, 1963, 958,145
5 Claims. (Cl. 318—138)



A D.C. motor with a constant torque comprising a first rotor and a first stator provided with two Hall probes perpendicular to each other for providing output voltages respectively proportional to the sine and the cosine of the angular position of the first rotor and a second rotor and a second stator provided with two windings perpendicular to each other. A constant angular shift is maintained between the first and the second rotor and the windings of the second stator are respectively fed with the voltages supplied by the Hall probes.

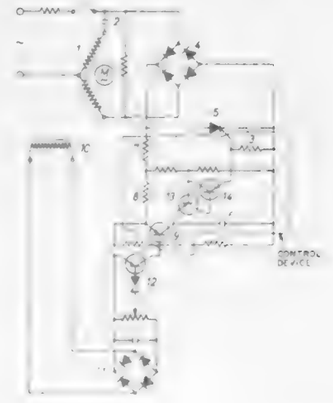
3,375,423
SYNCHRONOUS MOTOR, ESPECIALLY FOR ELECTRIC CLOCKS
Franz Mayer and Alfred Meisner, Nurnberg, Germany, assignors to Diehl, Nurnberg, Germany
Filed June 1, 1965, Ser. No. 460,022
Claims priority, application Germany, June 5, 1964, D 44,607
12 Claims. (Cl. 318—138)

Synchronous motor having a first driving coil to which the supply of driving pulses is under the control of the said motor and a second driving coil to which the supply



of driving pulses is under the control of an oscillatory member independent of said motor.

3,375,424
CONTROL CIRCUIT FOR INDUCTION MOTORS
Wolfgang Gerhard Ulrich Aye, Nurnberg, Max Joachim Balkow, Feucht, near Nurnberg, Hans Karl Hermann Hasse, Nurnberg, and Gunter Josef Rauter, Ruhstorf (Rott), Germany, assignors to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed July 14, 1965, Ser. No. 471,925
Claims priority, application Germany, July 17, 1964, St 22,423
8 Claims. (Cl. 318—227)

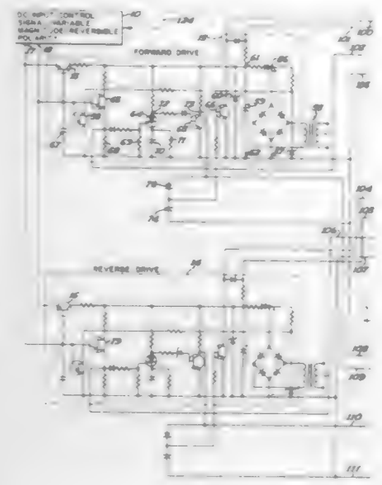


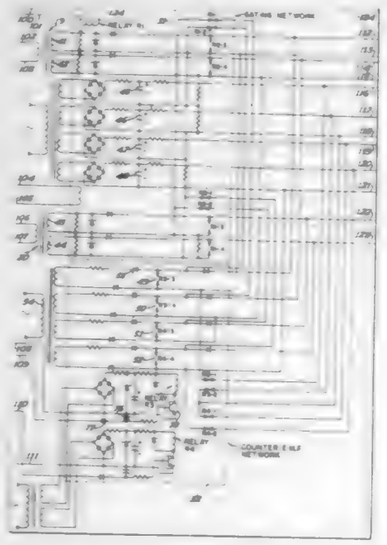
Control circuit for enabling selective rotational speed and direction variations in induction motors. The control circuit uses controlled rectifier switching to alter the frequency of applied voltage to change the speed. A feedback circuit is used to regulate the adjusted speed to compensate for differences in speed regulations caused by the resistance in the rotor circuitry.

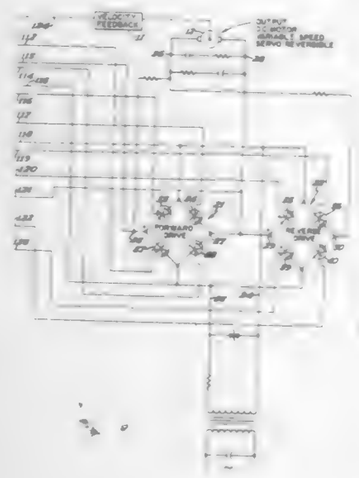
3,375,425
SERVO REVERSIBLE CONTROL APPARATUS FOR D.C. MOTOR
Lawrence K. Bell, Minneapolis, Minn., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Mar. 29, 1965, Ser. No. 443,571
7 Claims. (Cl. 318—302)

A servo reversible control apparatus to control the speed and direction of movement of a DC motor by means of a reversible polarity command signal and a motor produced velocity feedback signal, the motor being energized from two bridge rectifier networks, each bridge network having four SCR's, and with a forward drive electronic network connected to control one of the bridge networks and a reverse drive electronic network connected to control the other bridge network in a manner

to turn-on two of the SCR's and to modulate-on the other two SCR's, including a cross coupling to render one bridge inoperative when the other is operative, and including a

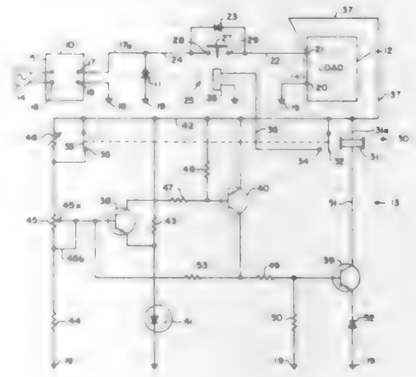






relay structure to reverse energize the motor on a command for speed slowdown of the motor and then utilize the motor counter EMF to commutate-off that rectifier network which reverse energized the motor and to energize the other rectifier network to maintain forward energization at the new lower speed.

3,375,426
BATTERY SYSTEM CONTROL CIRCUIT
Charles D. Dolamore, Lorain, Ohio, assignor to Lorain Products Corporation, a corporation of Ohio
Filed Feb. 17, 1965, Ser. No. 433,425
7 Claims. (Cl. 320—15)



1. In a battery system having a load and a battery charger connected across the battery, in combination, a counter cell connected between the battery and the load, a bypass contactor having fixed contacts connected to opposite ends of said counter cell, a movable contact and a winding, a relay having first and second fixed contacts and first and second contact arms and a winding, a voltage divider and a first resistor connected across the load terminals, a second resistor and a zener diode connected across the load terminals, third and fourth resistors, a first transistor having a base electrode connected to said voltage divider, an emitter electrode connected to a point between said second resistor and said zener diode, and a collector electrode connected to one side of the load through said third and fourth resistors, coupling means, a second transistor having a collector electrode connected to said one side of the load through said winding of said relay, an emitter electrode connected to the other side of the load and a base electrode connected to said fourth resistor through said coupling means, means for connecting one end of said bypass contactor winding to said other side of the load, means for connecting said other end of said bypass contactor winding to said first fixed contact of said relay, means for connecting said first contact arm of said relay to said one side of said load, a feedback resistor connected between the base electrode of said first transistor and the base electrode of said second transistor, means for connecting said second fixed contact of the relay to a point between said voltage divider and said first resistor, means for connecting said second contact arm of the relay to said one side of the load whereby said first resistor is inserted in the current path between said voltage divider and said one side of said load when the relay is de-energized.

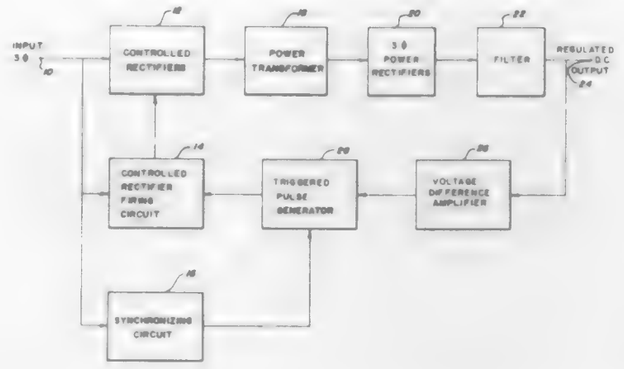
3,375,427
POLYPHASE RECTIFIER
Richard George Magner, Lorain, and Robert J. Plow, Avon Lake, Ohio, assignors to Lorain Products Corporation, a corporation of Ohio
Filed Mar. 12, 1964, Ser. No. 351,505
10 Claims. (Cl. 321—5)

8. In a three-phase rectifier system, the combination comprising:

power transformer means having a plurality of input windings interconnected in a three-phase network and a plurality of output windings interconnected in a three-phase network;

a plurality of controlled impedance devices, each connected in series with one of said input windings and each including a control electrode;

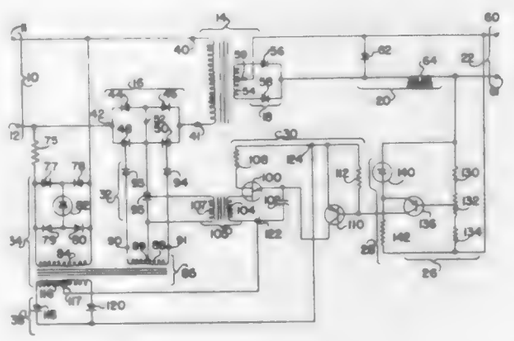
three-phase power input means connected to each of said controlled impedance devices;



firing means coupled to said three-phase power input means and coupled to the control electrode of each of said controlled impedance devices for selectively controlling the periods of conduction of said controlled impedance devices, said firing means including a semiconductor pulse gate and a semiconductor impedance device for each of said controlled impedance devices, each of said semiconductor impedance devices being connected between one of said pulse gates and one of said controlled impedance devices; and

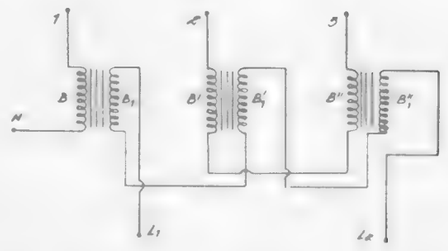
means coupled to said output windings for controlling the firing of said semiconductor impedance devices in accordance with a potential derived from said output windings.

3,375,428
REGULATED RECTIFIER CIRCUIT
Jefferson T. Mitchell, Bay Village, Ohio, assignor to Lorain Products Corporation, a corporation of Ohio
Filed Feb. 4, 1964, Ser. No. 342,496
12 Claims. (Cl. 321—18)



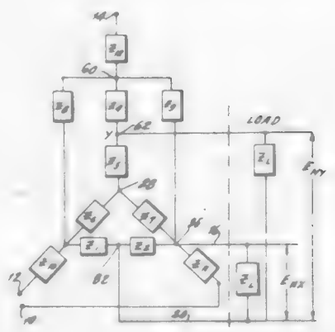
This invention relates to a regulated power supply having a pair of controlled rectifiers each actuated by the same gate circuit controlled rectifier. The gate circuit controlled rectifier receives square wave synchronizing signals derived from an AC source and signals from a phase control oscillator responsive to the output of a difference amplifier connected to the power supply output. In response to this combination of signals, the gate circuit controlled rectifier controls the periods of conductivity of the pair of rectifiers to closely regulate the power supply output voltage.

3,375,429
PHASE CONVERTING POWER TRANSFORMERS
Fernando Pagano, 2210 M.T. de Alvear, Ciudadela, Buenos Aires, Argentina
Continuation-in-part of application Ser. No. 303,479, Aug. 21, 1963. This application Nov. 1, 1966, Ser. No. 591,312
5 Claims. (Cl. 321—57)



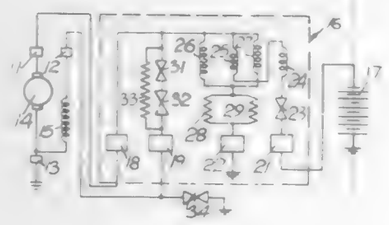
A phase converting power transformer for connecting a single phase load to a three-phase four conductor power supply, comprising a simple primary winding to be connected between one phase of the three-phase power supply and the neutral conductor of said power supply; a compound primary winding to be connected to the two remaining phases of said power supply; a secondary winding to be connected to said single phase load, said secondary winding comprising two windings, a first one corresponding to the secondary winding of said simple primary winding and the second one corresponding to the secondary winding of said compound primary winding.

3,375,430
RESISTIVE NETWORK FOR SYNCHRO TO RESOLVER VOLTAGE CONVERSION
John P. Jagy, Syosset, and John M. Scutt, Great Neck, N.Y., assignors to Sperry Rand Corporation, Ford Instrument Company Division, Long Island City, N.Y., a corporation of Delaware
Filed Aug. 16, 1965, Ser. No. 479,985
17 Claims. (Cl. 321—58)



A signal transformation network is provided with a passive impedance network for the reception of synchro signals and the accurate conversion of these signals to equivalent resolver signals. The passive network is resistive and has a plurality of resistors connected in a predetermined array to provide a high impedance balanced input for the reception of synchro signals and the conversion to equivalent resolver signals at the output terminals of the network.

3,375,431
BATTERY CHARGING SYSTEMS FOR ROAD VEHICLES
Morris Jackson Cook, Redditch, and John William Herbert Freeman, Coventry, England, assignors to Joseph Lucas (Industries) Limited, Birmingham, England
Filed Feb. 16, 1965, Ser. No. 433,022
Claims priority, application Great Britain, Feb. 28, 1964, 8,339/64
11 Claims. (Cl. 322—25)

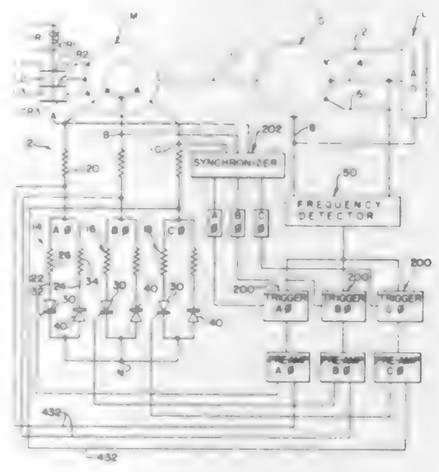


In a battery charging system a generator charges the battery and a voltage regulator limits the output voltage of the generator by opening a pair of contacts in series with the generator field winding whenever the output voltage of the generator exceeds a predetermined value. In order to increase contact life, a Zener diode or clipper diode is connected across the field winding or the contacts to limit the voltage developed across the contacts.

3,375,432
CONTROL CIRCUIT FOR REGULATING THE VOLTAGE OF AN A.C. GENERATOR
Harry D. Kauffman, Cincinnati, Ohio, assignor, by mesne assignments, to Park-Ohio Industries, Inc., a corporation of Ohio
Filed June 14, 1965, Ser. No. 463,737
3 Claims. (Cl. 322—28)

Therm is provided a control circuit for regulating the energization of the field winding of a motor-generator set from a source of pulsating direct current having a series of repetitive pulsations. This control circuit includes a silicon controlled rectifier connected in series with the field winding; a gate pulse generator having an output signal train and pulses with leading portions; means for applying the pulses to the rectifier for controlling the conduction thereof and the current flow through the winding; means for producing a selected command signal proportional to a desired voltage output from the motor driven generator; means for producing a feed back signal from the generator proportional to the voltage output therefrom; means for comparing the command and feed back signals for controlling the gate pulse generator to adjust the position of the leading portions of the pulses generated thereby in direct response to the difference between the command and feed back signals; a source of reference alternating current connected to the pulse generator for timing the occurrence of the pulses; and, means for adjusting the phase of the reference alternating current to align the pulse occurrence with the pulsations of the direct current power source.

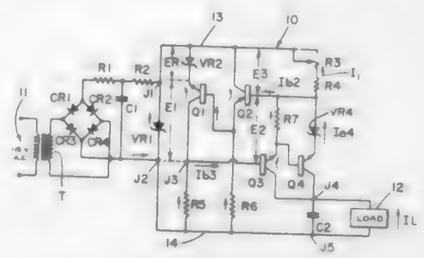
3,375,433
DEVICE FOR CONTROLLING THE OUTPUT FREQUENCY OF A GENERATOR DRIVEN BY A WOUND ROTOR INDUCTION MOTOR
John K. Haggerty, Chagrin Falls, Leonard A. Lowe, Mentor, Peter C. McHale, South Euclid, James J. Unger, Cleveland Heights, and Robert E. White, Euclid, Ohio, assignors to The Electric Products Company, Cleveland, Ohio, a corporation of Ohio
Filed Oct. 5, 1964, Ser. No. 401,531
26 Claims. (Cl. 322—32)



There is provided a device for maintaining within a preselected range the output frequency of a generator driven by a wound rotor induction motor having a secondary torque controlling circuit. This device comprises means for generating a signal corresponding to the output frequency of the generator, and the secondary circuit includes a plurality of separate impedance control circuits with the impedance of these control circuits determining the torque the motor exerts on the generator. In each of the control circuits there is provided a silicon controlled rectifier with a gate and an anode-cathode path in series in the circuit. A trigger circuit connected to each of the gates supplies a turn-on signal to the gate in each of the control circuits during a portion of the positive half cycle of the control circuits. There is also provided a means for shifting the position of this signal with respect to the positive half cycle in response to the frequency corresponding signal to compensate for variations in the frequency of the generator output.

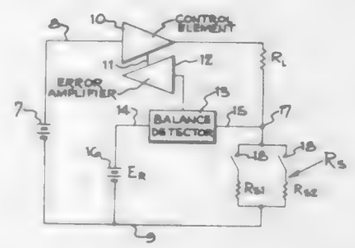
3,375,434
CONSTANT CURRENT GENERATOR
Jerome R. Shapiro, Palos Verdes Peninsula, Calif., assignor to Winsco Instruments & Controls Company, Inc., a corporation of California
Filed May 6, 1965, Ser. No. 453,658
1 Claim. (Cl. 323—4)

A constant current generator is provided wherein a pre-regulated D-C power supply provides current for a load connected between suitable output terminals. A current regulating transistor and variable resistance are connected in series between the output terminals and further transistor means are provided responsive to a change in



voltage across the variable resistance means, this further transistor means connecting to the current regulating transistor to render current passing through the load constant.

3,375,435
CONSTANT CURRENT REGULATOR AND VOLTAGE SENSING CIRCUIT
John D. Baugher, Little Silver, N.J., assignor to The Rowan Controller Company, Westminster, Md., a corporation of Maryland
Filed Mar. 8, 1966, Ser. No. 532,633
5 Claims. (Cl. 323—4)



5. In a constant current power supply having a source of current, output lines connected to said source of current, current control means connected in series in one of said lines, a load and a sensing resistance connected in series and across said output lines, said sensing resistance including plural resistors connected through series switch means in parallel relation, a reference voltage source connected to said other line, a balance detector having input leads connected to said reference voltage and between said load and sensing resistance and an output lead connected to said control means, the improvement in the connection of the balance detector to said sensing resistance comprising,

plural summation resistances, each connected on one side respectively to a sensing resistor between the resistor and its switch means,

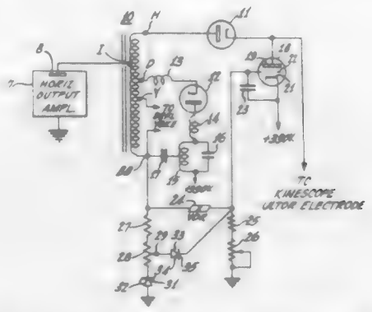
means connecting the other side of said summation resistances to each other and to said balance detector,

the ratios of the ohmic values of said summation resistances to their sensing resistors being the same.

3,375,436
REGULATED HIGH VOLTAGE D.C. POWER SUPPLY
Bethel E. Denton, Robards, Ky., assignor to Radio Corporation of America, a corporation of Delaware
Filed Nov. 17, 1964, Ser. No. 411,839
6 Claims. (Cl. 323—22)

1. In a color television receiver energized by a power source and including a color image reproducing device having an ultor electrode, a high voltage rectifier having an output electrode connected to said ultor electrode for supplying an energizing potential thereto, a source of a first control voltage and a source of a second control voltage, said first and second control voltages being responsive to and reflective of variations in the voltage amplitude of said power source, one of said control voltages having a larger amplitude and exhibiting greater amplitude variations with variations in the voltage amplitude of said power source than the other of said control voltages, and a regulator device having a pair of control electrodes for altering the conductivity of a current path in said device, said current path being connected between said rectifier output electrode and said source of first control voltage, one of said control electrodes being coupled to said source of first control voltage, the combination comprising:

a first voltage divider network having a resistance-exhibiting portion connected between said second control voltage source and a point of substantially unvarying potential;

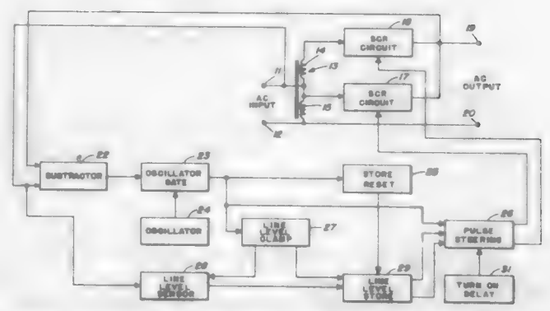


means for connecting the other control electrode of said regulator device to a point on the resistance-exhibiting portion of said first voltage divider network;

a second voltage divider network comprising a resistance-exhibiting portion and a substantially constant voltage portion connected in series in the order named between said source of second control voltage and said point of substantially unvarying potential; and

a diode connected from a point on said second voltage dividing network to said other control electrode of said regulator device in such a manner and polarity that said diode is maintained substantially non-conducting for a preselected voltage amplitude of said power source and is rendered conducting for voltage amplitudes of said power source lower than said preselected voltage amplitude.

3,375,437
MAINTENANCE OF POWER SUPPLY REGULATION DURING LOW-LINE TRANSIENTS
Robert N. Mellott, Palos Verdes Estates, and John J. Phelan, Woodland Hills, Calif., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Filed Mar. 15, 1965, Ser. No. 440,038
4 Claims. (Cl. 323—22)



A voltage regulator to regulate the output of a power supply during low-line transients. Under normal line con-

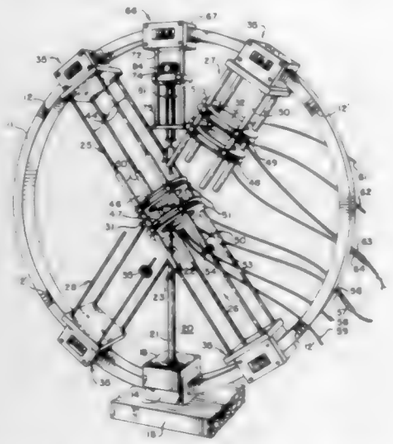
ditions, the line voltage is fed unamplified through the regulator to the power supply by means of an autotransformer. When the line voltage drops, the regulator functions to fire parallel connected rectifiers, connected in each side of the line, to activate additional windings on the autotransformer thereby stepping up the output. This action prevents the power supply from losing regulation during low-line transients.

3,375,438

METHOD AND MEANS FOR ORIENTING CRYSTALS BY ALTERNATE APPLICATION OF ANGULARLY SPACED MAGNETIC FIELDS

Martin F. Auer, Munich, Germany, assignor to the United States of America as represented by the Secretary of The Army

Filed Aug. 8, 1966, Ser. No. 571,146
8 Claims. (Cl. 324—14)



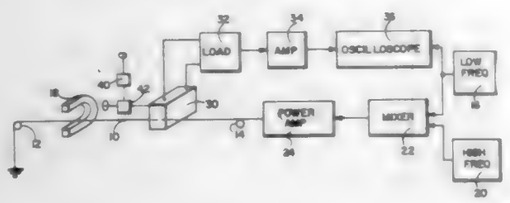
1. A method for locating crystallographic axes in a single spherical crystal ferromagnetic body having first and second axes angularly displaced by an angle α and having a related axis angularly displaced from said first and second axes by a known angle comprising the steps of mounting said body to rotate freely and universally about its center, and alternately subjecting said body to one of a pair of uniform magnetic fields the directions of which are adjustable and mutually displaced by said angle α, said body rotating until each of said first and second axes is in alignment with a corresponding one of said magnetic fields.

3,375,439

METHOD AND APPARATUS FOR TESTING MAGNETIC HEADS UTILIZING A VIBRATING WIRE CARRYING CURRENT

Yujiro Yamamoto, Santa Ana, Calif., assignor to North American Rockwell Corporation, a corporation of Delaware

Filed Dec. 7, 1964, Ser. No. 416,484
12 Claims. (Cl. 324—34)



1. Apparatus for testing the dynamic response of a magnetic head comprising

a taut wire suspended between two fixed points,

means for causing said wire to vibrate between said two points,

means connected to said vibrating wire for conducting a current therethrough,

means for adjusting the position of a magnetic head under test relative to said wire, and

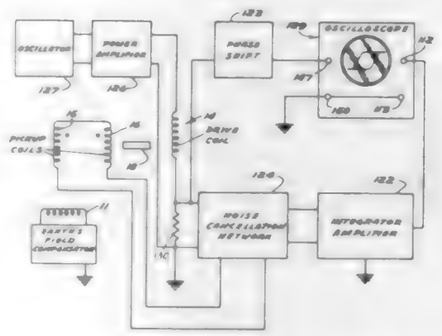
means adapted to be connected to said magnetic head for displaying the response of said head to the magnetic field provided by said current signal through said vibrating wire.

3,375,440

HYSTERESIS LOOP CHECKER FOR MAGNETIC MEMORY ARRAY ELEMENTS

Peter L. Morawetz, Richard J. Petschauer, and Eugene A. Kruschke, Minneapolis, Minn., assignors to Fabri-Tek Incorporated, Minneapolis, Minn., a corporation of Wisconsin

Filed Apr. 16, 1965, Ser. No. 448,763
3 Claims. (Cl. 324—34)



1. Test apparatus for an array of film magnetic elements comprising:

a source of energy in the form of a bidirectional current;

a drive coil electrically connected to said source of energy for producing a magnetic drive field;

first and second pickup coils mounted within said magnetic drive field;

means for mounting the array of magnetic elements within said first pickup coil so that the magnetic signal from all the film magnetic elements of the array will be sensed only by said first pickup coil;

said second pickup coil mounted in spaced relation to said first pickup coil and remote from the array of magnetic elements to prevent sensing by said second pickup means of the magnetic signal from the array;

signal sensing means including in-phase balance control means connected across said first and second pickup coils, and being variable for balancing out any difference in amplitude of induced voltage between said first and second coils due to said magnetic drive field; difference amplifying means having first and second input terminals; means including said in-phase balance control means connecting said first and second pickup coils, respectively, to said first and second input terminals; sample signal input terminals adapted to receive a sample of the bidirectional energy applied to said drive coil; out-of-phase balance control means connected across said first and second input terminals, and connected to said sample signal input terminals, for balancing out errors in phase between the magnetic drive field signal induced in said first and second pickup coils; and means connected to an output terminal on said difference amplifier to provide a signal for display and measurement;

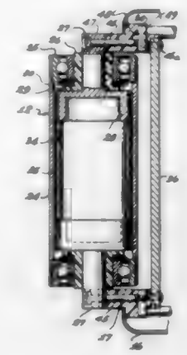
and means connecting said first and second pickup coils in series opposition across said signal sensing means, for providing a signal from the array of magnetic elements substantially unaffected by said magnetic drive field.

3,375,441

ROLLER ELECTRODE PROBE FOR ELECTRICAL MOISTURE-TESTING INSTRUMENT HAVING A ROTATABLE OUTER CYLINDER CONCENTRIC WITH FIRED INNER CYLINDER ELECTRODE

Marvin L. McBrayer, Alhambra, Calif., assignor to Moisture Register Company, Alhambra, Calif., a corporation of California

Filed June 1, 1965, Ser. No. 460,191
6 Claims. (Cl. 324—61)



A system of roller electrodes adapted for application to a rotating roll of paper and the like in an electric moisture determining system. The periphery of the roll of paper is contacted by two parallel, spaced rotatable electrode cylinders, spaced by a narrow annular air gap from a stationary internal electrode cylinder. An electric oscillator circuit is connected at its two sides to the two inside stationarily mounted cylinders. Each pair of outer and inner cylinders forms a coupling condenser, of which the outer cylinder is rotatable. An electric field extends from each outer electrode cylinder through a portion of the roll of paper on test and to a grounded portion of the equipment. The arrangement eliminates the need of a sliding brush type connection from the outer rotatable electrode system to the electrode circuitry, and hence avoids errors and instability owing to variations in resistance occurring at such brushes.

3,375,442

PARAMAGNETIC MICROWAVE POWER DETECTOR WHEREIN INTERACTING ELECTRIC AND MAGNETIC FIELDS EXIST IN A SINGLE PLANE

Hellmut J. Juretschke, Brooklyn, and Walter G. Egan, Richmond Hill, N.Y., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy

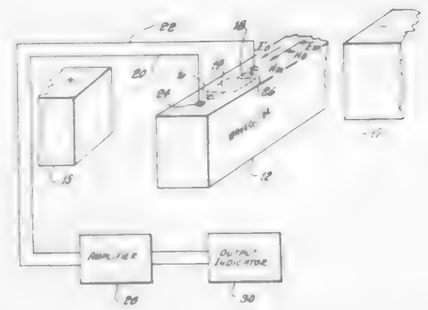
Continuation-in-part of application Ser. No. 41,710, July 8, 1960. This application Dec. 13, 1962, Ser. No. 244,534
11 Claims. (Cl. 324—95)

1. A device for the detection of microwave electromagnetic energy comprising, in combination:

a thin film of electrically conductive, strongly paramagnetic material located within the electromagnetic field of said microwave energy at a point where the magnetic component of the microwave field is strong and lies in the plane of said film, the electric component of the microwave field also lying in the plane of said film;

means for establishing a time-invariant magnetic field in the plane of said film at right angles to the microwave magnetic field, the strength of said time-invariant magnetic field being sufficient to produce a condition of magnetic spin resonance in said film; and

a pair of spaced electrodes in electrical contact with said film, the direction of the spacing being the same as the direction of the D.C. electric field produced



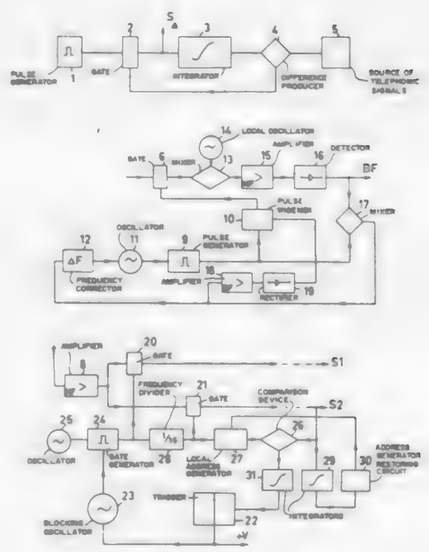
in said film by the interaction of the microwave energy with the time-invariant magnetic field.

3,375,443

RADIO-TRANSMISSION SYSTEM FOR SELECTIVE PULSE COMMUNICATION BETWEEN STATIONS WHICH SHARE A FREQUENCY BAND WITH OTHER STATIONS

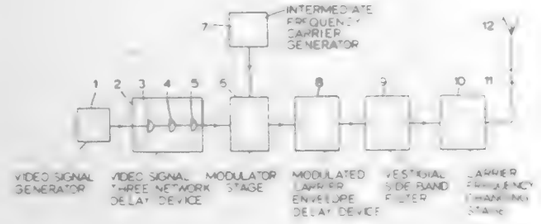
Gaston Salmet, St. Maur, France, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware

Filed Apr. 15, 1964, Ser. No. 359,858
Claims priority, application France, Apr. 26, 1963, 932,761
8 Claims. (Cl. 325—64)



1. In a radio transmission system of the type having a transmitter for transmitting information in the form of modulated pulses having a pulse recurrence frequency characteristic of a given receiver, and said given receiver comprises means for receiving only pulsatory signals having said characteristic pulse recurrence frequency; the improvement wherein said transmitter comprises means for periodically varying the position of said pulses at a variation frequency, and said receiver comprises receiving gate means, means for periodically releasing said gate means at said characteristic frequency for passing incoming signals, and automatic frequency control means responsive to said periodic variation of the position of said pulses for periodically varying the release times of said gate means at said variation frequency, whereby said gate means is released in synchronism with the reception of said modulated pulses.

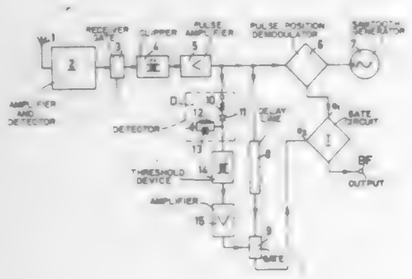
3,375,444
VESTIGIAL SIDEBAND MODULATOR CIRCUIT
Geoffrey John Lomer, Ickenham, Uxbridge, England, assignor to Electric & Musical Industries Limited, Hayes, England, a British company
Filed Nov. 21, 1963, Ser. No. 325,353
Claims priority, application Great Britain, Nov. 30, 1962, 45,341/62
3 Claims. (Cl. 325—136)



INTERMEDIATE FREQUENCY CARRIER GENERATOR
VIDEO SIGNAL GENERATOR
VIDEO SIGNAL THREE NETWORK DELAY DEVICE
MODULATOR STAGE
MODULATED CARRIER ENVELOPE DELAY DEVICE
VESTIGIAL SIDE BAND FILTER
CARRIER FREQUENCY TRANSMITTING STAGE

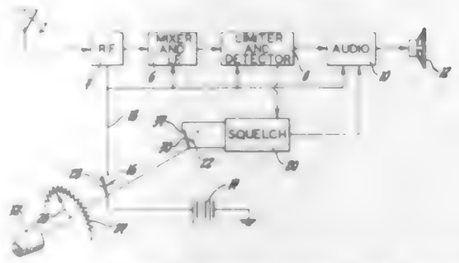
1. Apparatus for generating an amplitude modulated carrier wave having a vestigial sideband, comprising a source of modulating signal, means for delaying frequency components of the modulating signal which are transmitted single sideband relative to components of the modulating signal which are transmitted double sideband a source of carrier wave, means for modulating the amplitude of the carrier wave with the modulating signal after said delay has been effected, means for delaying selected frequency components of the modulated carrier wave, said selected components at least including components which have a counterpart in the vestigial sideband and means for partially removing one sideband of the modulated carrier wave to form the vestigial sideband, the delays of said frequency components of the modulating signal and of the carrier wave being arranged to substantially reduce the relative delay which would otherwise be produced by the partial removal of said one sideband.

3,375,445
DEVICE FOR DISTORTION REDUCTION IN A PPM RECEIVER
Gaston Salmet, St. Maur, France, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Nov. 10, 1964, Ser. No. 410,145
9 Claims. (Cl. 325—324)



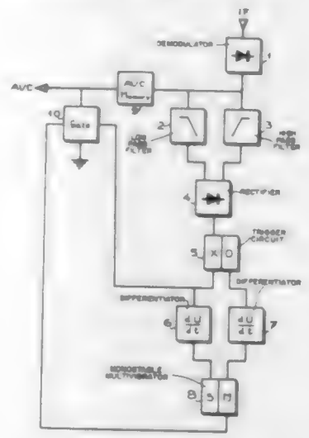
The effect of interference is reduced in a pulse code modulation receiver by providing means for gating the output of a pulse demodulator to an output circuit only when the input does not include pulses that are spaced too closely. In a pulse position modulation system in which the input pulses pass through a gate opened only at intervals during which a pulse is expected, a detector circuit is provided for detecting the occurrence of multiple pulses during the interval, and the detector circuit produces a control signal for inhibiting gating of the demodulator output in the event of multiple pulses.

3,375,446
COMBINATION RADIO RECEIVER VOLUME AND SQUELCH CONTROL
James H. Guyton, Kokomo, Ind., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Filed Sept. 10, 1964, Ser. No. 395,449
2 Claims. (Cl. 325—399)



The construction and interconnection of a switch for radio receivers having a squelch circuit. Switch shaft carries volume control knob and two cam actuators for On-Off switch and squelch circuit switch so squelch is deactivated at maximum volume position.

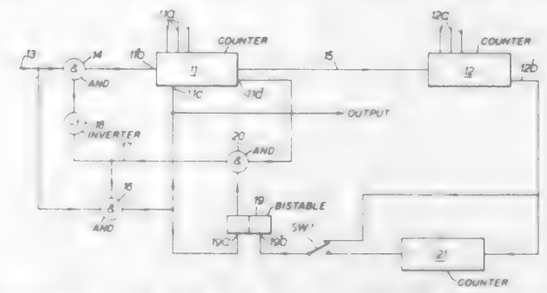
3,375,447
AUTOMATIC GAIN CONTROL CIRCUIT WITH DELAYED DECAY OF THE GAIN CONTROL SIGNAL
Theodorus van der Beek, Leiden, Netherlands, assignor, by mesne assignments, to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Oct. 14, 1964, Ser. No. 403,748
Claims priority, application Netherlands, Nov. 29, 1963, 301,150
6 Claims. (Cl. 325—410)



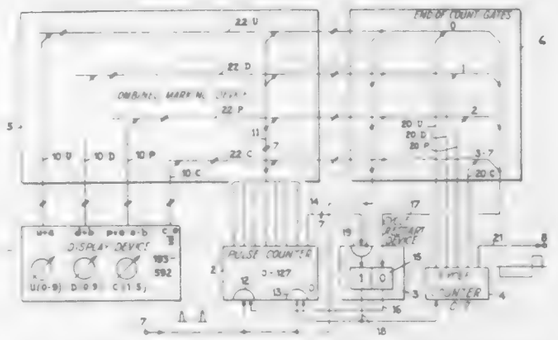
An automatic gain control circuit comprising a memory circuit for storing a gain control voltage. A gate circuit is provided to discharge the memory circuit in response to the simultaneous occurrence of an output of a trigger circuit indicating the absence of an input signal, and the output of a monostable multivibrator connected to indicate the lapse of a predetermined period of time following the last occurrence of an input signal.

3,375,448
VARIABLE DIVIDERS
John David Newman, Hayling Island, and Robert A. Elliot, Petersfield, England, assignors to The Plessey Company Limited, Ilford, England a British company
Filed Aug. 30, 1965, Ser. No. 483,457
Claims priority, application Great Britain, Sept. 4, 1964, 36,432/64
7 Claims. (Cl. 328—42)

A variable divider apparatus having counter means settable to a desired division ratio into which is applied input signal pulses, bistable means operable when said counter means attains its recognition state, gating means responsive to said bistable means and effective for causing said counter means to be reset by the rerouting of said input signal pulses, and side-step means effective for causing the overall division ratio of said variable divider to be changed from the division ratio set into said counter means.



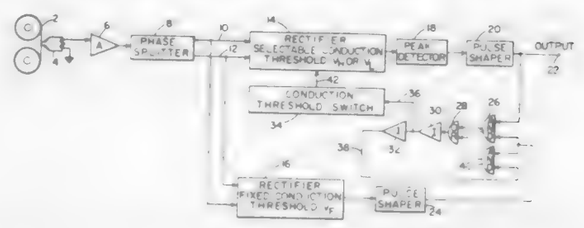
3,375,449
FREQUENCY DIVIDER WITH VARIABLE DIGITAL RATIO
Jean Louis Ribour, Boulogne-Billancourt, and Henry Fernand Garin, Paris, France, assignors to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed May 12, 1965, Ser. No. 455,099
5 Claims. (Cl. 328—48)



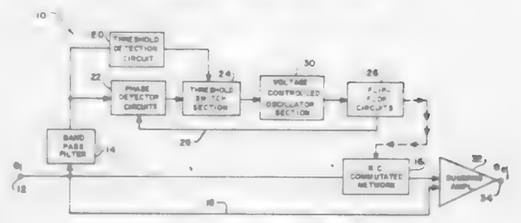
1. A variable pulse frequency divider for counting incoming pulses and producing an output pulse for each group of input pulses equal in quantity to the number by which the frequency is being divided, said number having a plurality of digital positions, comprising
a pulse counter;
means for applying the input pulses to said pulse counter;
means for setting up physical conditions for each digital position related to the complement of the corresponding digit of said number;
means responsive to the combination of said physical conditions for each digital position and the state of said pulse counter each time it has counted up to a predetermined number assigned to said digital position, to produce a signal; and
cyclic programming means responsive to successively selected ones of said signals for controlling said pulse counter and producing an output pulse.

3,375,450
PEAK DETECTOR WITH AUTOMATIC NOISE LEVEL ADJUSTING MEANS
Douglas B. Ayres, Cochituate, and David R. Sutton, Framingham, Mass., assignors to Minneapolis-Honeywell Regulator Company, Minneapolis, Minn., a corporation of Delaware
Filed Apr. 29, 1964, Ser. No. 363,392
9 Claims. (Cl. 328—150)

A circuit for detecting the peak amplitude occurrence of each of a plurality of sequentially applied signal pulses and having a signal detection stage whose noise discrimination level is set to and sustained at a high or a low value in accordance with the peak amplitude of the immediate preceding signal pulse.

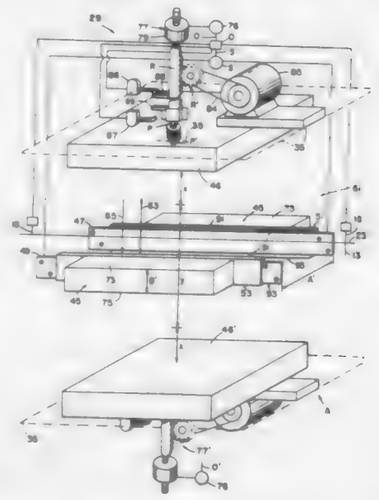


3,375,451
ADAPTIVE TRACKING NOTCH FILTER SYSTEM
Michael T. Borelli, Harry J. Daniels, and Hans H. Hosenthien, Huntsville, Ala., assignors to the United States of America as represented by the Administrator of the National Aeronautics and Space Administration
Filed June 17, 1965, Ser. No. 464,878
19 Claims. (Cl. 328—167)



An adaptive notch filter which constructs a reversed phase noise signal utilizing modulation techniques, and then sums the constructed signal with the composite input signal so that the noise signal is cancelled.

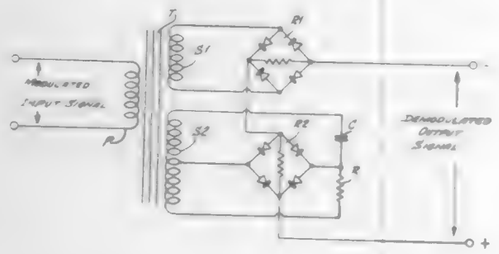
3,375,452
FERRITE ADJUSTABLE KICKER MAGNET FOR EXTRACTING BEAMS OF CHARGED PARTICLES
Eric B. Forsyth, Brookhaven, N.Y., assignor to The United States of America as represented by the United States Atomic Energy Commission
Filed Jan. 13, 1967, Ser. No. 609,730
7 Claims. (Cl. 328—235)



A method and apparatus for magnetically, sequentially, extracting beams of charged particles from an endless high energy accelerator ring by selectively separating non-con-

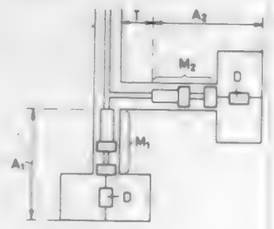
ducting, magnetically susceptible ferrite blocks to form a large cross-section aperture for receiving large diameter low momenta beams, and selectively moving said blocks together to form a small cross-section aperture with stationary, spaced apart, ferrite blocks having stationary conductors thereon that receive small diameter, high momenta, beams and to eject these small diameter beams from the accelerator.

3,375,453
SUPPRESSED CARRIER DEMODULATION CIRCUIT
William Adler, Westbury, N.Y., assignor to Servo Corporation of America, Hicksville, N.Y., a corporation of New York
Filed Jan. 21, 1965, Ser. No. 426,719
4 Claims. (Cl. 329—145)



A circuit for demodulating amplitude modulated signals in which a first rectifier rectifies the full wave of the incoming signal, and a second rectifier rectifies this signal after a phase shifter has shifted the phase of the incoming signal by 90 degrees. The outputs of the first and second rectifiers are then added to produce the demodulated output signal.

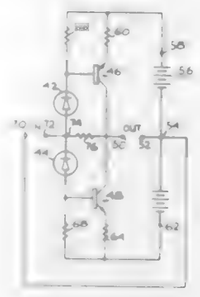
3,375,454
PARAMETRIC AMPLIFIERS WITH QUARTER-WAVE SPACING
Colin Stuart Aitchison, Horley, England, assignor to North American Philips Company, Inc., New York, N.Y., a corporation of Delaware
Filed Aug. 31, 1967, Ser. No. 664,672
Claims priority, application Great Britain, Sept. 1, 1966, 38,999/66
3 Claims. (Cl. 330—4.9)



The gain-bandwidth factor of a diode parametric amplifier system is increased by providing two diode parametric amplifiers having their signal input ports interconnected by a transmission line section that is one quarter wavelength long at the signal frequency.

3,375,455
SYMMETRICAL AMPLIFIER WITHOUT DC SHIFT BETWEEN INPUT AND OUTPUT
Nathaniel Motta, Pasadena, Calif., assignor to California Institute Research Foundation, Pasadena, Calif., a corporation of California
Filed Oct. 20, 1964, Ser. No. 405,040
7 Claims. (Cl. 330—13)

A transistor amplifier is provided which is suitable for multi-stage utilization and includes two opposite impurity type transistors, with their collectors connected together and their emitters coupled to opposite sides of a center tap power supply. Output is taken from the collectors and the center tap of the power supply. The



bases are biased by either diodes for low level inputs or zener diodes for high level inputs. Input is applied between the center point of the diodes and the center tap of the power supply.

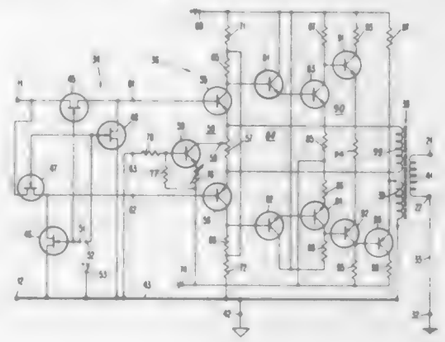
3,375,456
VARIABLE BANDWIDTH CRYSTAL FILTER CIRCUIT
Arnold M. Frisch, Portland, Oreg., assignor to Tektronix, Inc., Beaverton, Oreg., a corporation of Oregon
Filed Dec. 7, 1964, Ser. No. 416,355
7 Claims. (Cl. 330—21)

A variable bandwidth crystal filter circuit is described whose gain remains substantially constant. The bandwidth is varied automatically by a voltage sensitive impedance, such as a diode, which changes the effective emitter load resistance of an output transistor whose input impedance is employed as part of a resonant circuit connected to the output of the crystal filter. The transistor is connected as a phase splitter amplifier with two outputs of opposite phase and such outputs are coupled together through a gain compensation network to a common output terminal so that such two outputs are only approximately 90 degrees out of phase when they are combined together to provide an output signal whose amplitude remains substantially constant in spite of the changes in frequency bandwidth.

3,375,457
DATA ACQUISITION AMPLIFIERS
Carl Paul Hollstein, Jr., Campbell, Calif., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York
Filed Jan. 22, 1965, Ser. No. 427,246
8 Claims. (Cl. 330—30)

Common mode voltage rejection and signal source isolation of a data acquisition differential amplifier are

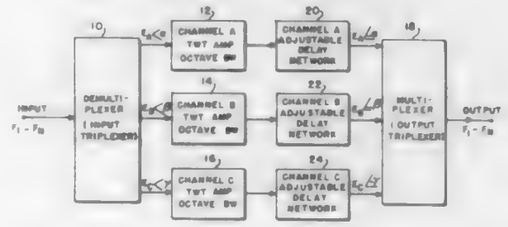
enhanced by a 4-transistor switch arrangement connecting the signal input terminals cyclically and alternately to the signal terminals of the amplifier. Two transistors are switched to connect the input terminals to the signal terminals in one phase of each cycle. The other two transistors are then switched to invert the connections between the signal terminals and the input terminals in the second phase of each cycle.



This arrangement permits one input terminal to be connected to ground or other point of reference potential. A continuous galvanic connection is afforded for reference potential leads.

The output stage of the amplifier comprises a pair of complementary connected transistors followed by a single emitter follower transistor coupled to the primary winding of an isolation transformer.

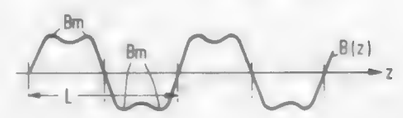
3,375,458
WIDE-BAND AMPLIFIER
Richard D. Kelch, Santa Clara, Calif., assignor to the United States of America as represented by the Secretary of the Army
Filed Mar. 30, 1964, Ser. No. 355,983
4 Claims. (Cl. 330—43)



INPUT
DEMULTI-PLEXER (INPUT TRIPLEXER)
CHANNEL A TWT AMP OCTAVE BW
CHANNEL B TWT AMP OCTAVE BW
CHANNEL C TWT AMP OCTAVE BW
CHANNEL A ADJUSTABLE DELAY NETWORK
CHANNEL B ADJUSTABLE DELAY NETWORK
CHANNEL C ADJUSTABLE DELAY NETWORK
MULTI-PLEXER (OUTPUT TRIPLEXER)
OUTPUT

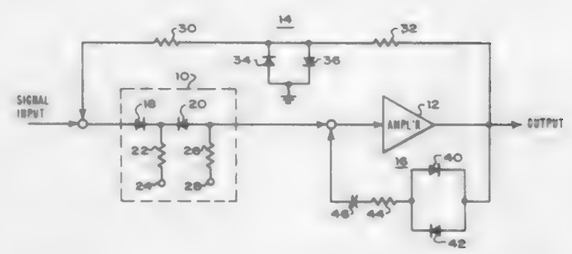
A multiplex-type amplifier system which is characterized by little or no degradation in performance at the cross-over points of the individual amplifiers within the amplifier system is provided. A wideband signal containing a plurality of octave signals is demultiplexed or separated into octave signals. Each of the octave signals is applied to a separate traveling wave tube octave amplifier. Each octave amplifier input signal, of course, has a particular phase angle. The output from each TWT amplifier is applied to a separate adjustable delay network. The time delay introduced by each delay circuit is of such an amount that the phase angle of the delay circuit output signal is the exact invert of the phase angle of the input signal to the TWT amplifier associated with that delay network. That is the phase angle of the output signal of a given delay circuit is exactly 360° minus the phase angle of the input signal to the TWT amplifier associated with that delay circuit. The outputs from the plurality of delay circuits are combined by a multiplexer. By maintaining the phase angle relationships as noted above there is little or no degradation of signals at the cross-over points of the TWT amplifiers.

3,375,459
ELECTRON BEAM TUBE WITH TRANSVERSE WAVE MODULATION FOR THE AMPLIFICATION OF HIGH-FREQUENCY SIGNALS
Horst Seunik and Werner Veith, Munich, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany, a corporation of Germany
Filed Aug. 6, 1965, Ser. No. 477,803
Claims priority, application Germany, Aug. 12, 1964, S 92,603
9 Claims. (Cl. 330—4.7)



An electron beam tube with transverse wave modulation, in which transverse waves in the electron beam are amplified by a magnetostatic pump field, the pump field being a magnetic field alternating periodically in direction with a field strength course which presents a dip in the middle of each half period of the magnetic field, and in which system the maxima of the field course on both sides of the dip are separated on the respective sides of the dip by at least a quarter of the period length, with the electron beam being focused in the second or higher pass range.

3,375,460
FEEDBACK AMPLIFIER HAVING AN INPUT CURRENT LIMITING CIRCUIT
Donald K. Miller, San Jose, Calif., assignor to Hewlett-Packard Company, Palo Alto, Calif., a corporation of California
Filed Aug. 4, 1965, Ser. No. 477,165
4 Claims. (Cl. 330—51)

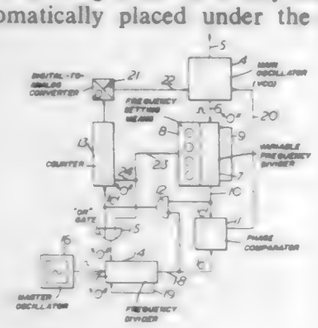


A feedback circuit is responsive to input signals below a first level of magnitude for reducing the input impedance of an amplifying circuit. This feedback circuit is inactivated and a feedback circuit for reducing the gain of an amplifier of the amplifying circuit is activated in response to input signals above the first level of magnitude. A current limiting circuit for preventing the amplifier from being saturated or biased to cutoff is responsive to input signals above a second and higher level of magnitude for decoupling the amplifier from those input signals.

3,375,461
AUTOMATIC FREQUENCY CONTROL LOOP WITH FREQUENCY SCANNING
Jean Louis Ribour, Boulogne-Billancourt, Seine, and Lucien Jacques Hardouin, Sceaux, Seine, France, assignors to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed June 6, 1966, Ser. No. 555,547
Claims priority, application France, June 30, 1965, 22,949
9 Claims. (Cl. 331—4)

A stabilized, variable frequency source which automatically scans in the frequency spectrum until a selected

output frequency is reached. When the output frequency is reached, the scanning is automatically stopped and the source is automatically placed under the control of a



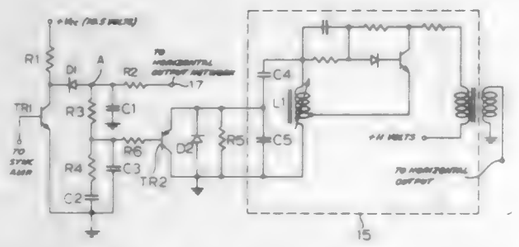
phase comparator to maintain the output frequency substantially constant. Primarily digital controls are utilized in the scanning and switching apparatus.

3,375,462

FREQUENCY CONTROL TRANSISTOR CONNECTED ACROSS CAPACITOR OF OSCILLATOR

James E. McTaggart, Waterloo, Ontario, Canada, assignor to Dominion Electrohome Industries Limited, Kitchener, Ontario, Canada

Filed Oct. 10, 1966, Ser. No. 585,558
8 Claims. (Cl. 331—8)



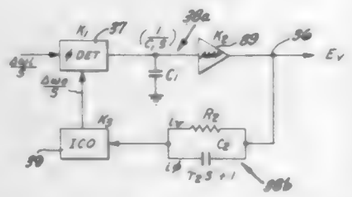
The frequency of an oscillator having a tank circuit comprising a coil, a first capacitor and a frequency determining capacitor, the latter two components being connected in a series circuit shunting the coil, is controlled by a control signal supplied to the base electrode of a transistor in a reactance network connected to the tank circuit. The transistor is connected in common collector configuration and operates under class C conditions. The transistor shunts the frequency determining capacitor.

3,375,463

LOOP FILTER FOR PHASE LOCKED LOOP FREQUENCY DETECTOR

R. Glen Madsen, Newport Beach, Calif., assignor to Astrodata, Inc., Anaheim, Calif., a corporation of California

Filed Dec. 17, 1965, Ser. No. 514,480
9 Claims. (Cl. 331—17)



The invention concerns an improved loop filter for use in a phase locked loop frequency to voltage converter that also includes a phase sensitive detector and a tracking oscillator connected in a loop. The filter comprises current integrating means and loop damping means connected in series sequence between the output from the detector and the input to the oscillator, and the output of the loop is taken at a point between the integrator means and the loop damping means.

3,375,464

SINGLE-PHASE, SOLID SOLUTION LUMINESCENT COMPOSITIONS, PREPARATION THEREOF AND LASERS CONTAINING SAME

Lothar H. Brixner, Brandywine Hills, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Filed May 14, 1964, Ser. No. 367,533
13 Claims. (Cl. 331—94.5)

11. A laser apparatus having as an essential component thereof a single crystal of a single-phase, solid-solution luminescent composition of the formula

$$Ln_xNa_xCa_{3-2x}(VO_4)_2$$

where Ln is a rare earth element of atomic number 58 through 71 and x has a value of from 0.01 to 0.4.

3,375,465

ALKALI COMPENSATED RARE EARTH DOPED ZINC OR CADMIUM BORATE PHOSPHORS

Lothar H. Brixner, West Chester, Pa., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del., a corporation of Delaware

Filed Nov. 25, 1964, Ser. No. 413,827
11 Claims. (Cl. 331—94.5)

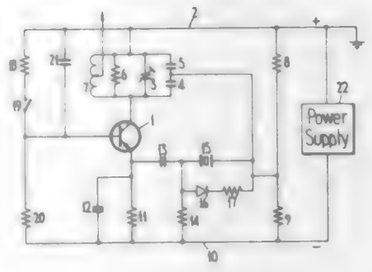
Novel single-phase solid-solution compounds of the formula $Ln_x^{+3}Na_x^{+1}A_{1-2x}^{+2}B_2O_4$ where Ln is a rare earth element of atomic number 60, 62, 63, 65, 66, or 69; A is cadmium or zinc; and x has a value of from 0.01 to 0.3, have been prapared and found to emit radiation over a very narrow range of spectral wavelength, making them useful as phosphors in general and more specifically as laser crystals.

3,375,466

QUICK STARTING CRYSTAL-CONTROLLED OSCILLATOR

Geoffrey Pratt, Bulkington, near Nuneaton, England, assignor to The General Electric Company Limited, London, England, a British company

Filed Nov. 22, 1966, Ser. No. 596,293
Claims priority, application Great Britain, Nov. 26, 1965, 50,349/65
4 Claims. (Cl. 331—116)



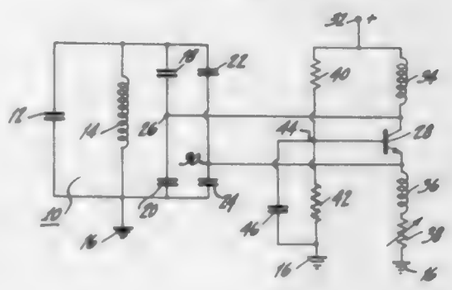
In an electric oscillator circuit the frequency of which is determined normally by a piezoelectric crystal connected in a positive feedback path, a rectifier element is connected in parallel with the crystal. This rectifier element is arranged to be forward biased for a short period following switch-on of the oscillator so as to short out the crystal and allow the amplitude of oscillation to build up rapidly at approximately the right frequency, as determined by a relatively low Q tuned circuit.

3,375,467

LOW NOISE VHF TRANSISTOR OSCILLATOR

Albert W. Weinrich, Collingswood, N.J., assignor to Radio Corporation of America, a corporation of Delaware

Filed May 27, 1966, Ser. No. 553,499
10 Claims. (Cl. 331—117)



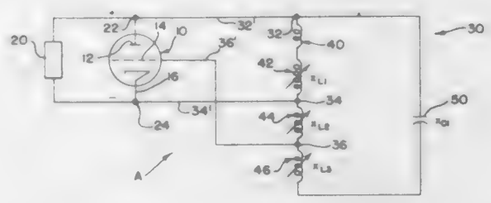
A low noise oscillator includes a tank circuit with the emitter and collector of a transistor coupled in feedback relation to the tank circuit. A large capacitor is effectively connected between the collector and base of the transistor to swamp out variations in the output capacity of the transistor. The coupling of the emitter of the transistor to the tank circuit is also chosen to maximize the Q of the oscillator, the value of a resistor connected between the emitter and a point of reference potential being chosen to reduce the phase modulation waves produced by the oscillator. The large capacitor, the coupling of the emitter to the tank circuit and the emitter resistor each contribute to the purity of, and thus reduce the noise present in the output wave of the oscillator.

3,375,468

CONTROL DEVICE FOR AN INDUSTRIAL HEATING OSCILLATOR

Cecil P. Porterfield and George A. Kappenhagen, Cleveland, Ohio, assignors to Park-Ohio Industries, Inc., a corporation of Ohio

Filed Aug. 12, 1964, Ser. No. 389,077
3 Claims. (Cl. 331—169)



3. A method for maintaining a substantially constant antiresonant resistance having a value R*ar* in a tank circuit of an oscillator for an industrial heating installation when the Q of the tank circuit is changed by variations in the electrical characteristics of the heating load, said tank circuit having a first portion which is predominantly inductive reactance and a second portion which is predominantly capacitive reactance, said method comprising the following steps:

(a) adjusting the inductive reactance of the predominantly inductive portion of the tank circuit inversely proportional to the change of Q so that the antiresonant resistance determined by the predominantly inductive portion is substantially R*ar*; and,

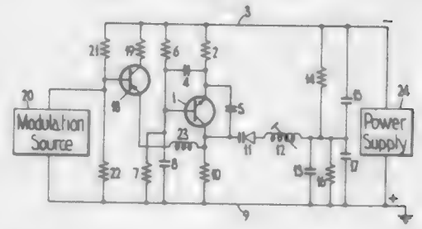
(b) adjusting the capacitive reactance of the predominantly capacitive reactance portion of the tank circuit proportionally to the change of inductance so that the antiresonant resistance determined by the predominantly capacitive portion is substantially R*ar*.

3,375,469

FREQUENCY MODULATED ELECTRIC OSCILLATORS UTILIZING VARIABLE CAPACITANCE SEMICONDUCTOR DIODES

David Dawson, Coventry, England, assignor to The General Electric Company Limited, London, England, a British company

Filed Nov. 8, 1966, Ser. No. 592,842
Claims priority, application Great Britain, Nov. 9, 1965, 47,464/65
2 Claims. (Cl. 332—30)



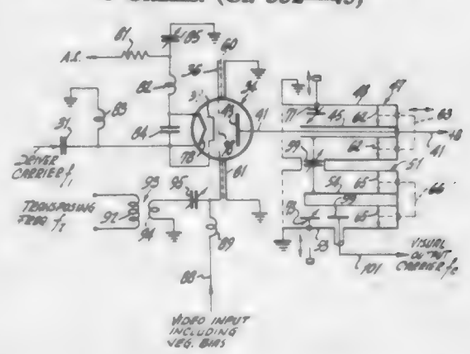
In a frequency modulated transistor oscillator the oscillation frequency of which is determined by a tuned circuit including a variable capacitance diode, the tuned circuit is arranged as a series tuned circuit between the collector electrode of the oscillator transistor and one pole of the supply, with one terminal of the diode connected to the collector electrode, and a frequency controlling signal is applied to the junction between the said collector electrode and the terminal of the diode. In this way the frequency controlling signal is not partly shunted by components of the tuned circuit.

3,375,470

MODULATION TECHNIQUE EXHIBITING IMPROVED STABILIZATION AT HIGH CARRIER FREQUENCIES

Adolf H. Bott, McMurray, Pa., assignor to Radio Corporation of America, a corporation of Delaware

Filed Nov. 27, 1964, Ser. No. 414,171
6 Claims. (Cl. 332—45)



The improved stability modulation scheme at high carrier frequencies comprises effectively operating a triode mixer stage in the grounded grid mode for a driver frequency, which driver frequency differs from the modulated output carrier frequency by a relatively low transposing frequency, while at the same time operating the triode mixer as a grid modulator at the relatively low transposing frequency.

3,375,471

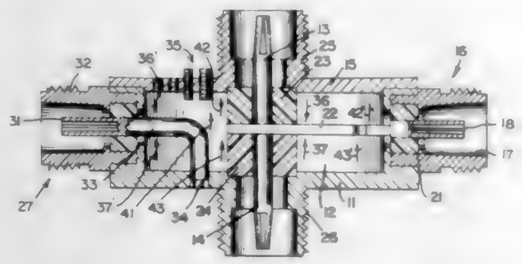
HIGH FREQUENCY COMPONENT EXHIBITING MAGIC T PROPERTIES

Theodore S. Saad, Westwood, Mass., assignor to Sage Laboratories, Inc., East Natick, Mass., a corporation of Massachusetts

Filed Nov. 6, 1964, Ser. No. 409,421
11 Claims. (Cl. 333—11)

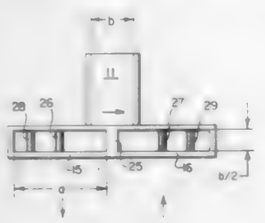
A cavity has opposed generally parallel conducting end walls for establishing an electric field generally per-

pendicular to the end walls. A conducting strip midway between and generally parallel to the end walls defines with respective ones of the end walls parallel plate transmission lines for coupling energy from a TEM input branch to intermediate branches in respective ones of the end walls that are coupled to the conducting strip. An odd mode branch is for establishing an odd TE mode in the cavity having electric field components perpendicular to the end walls so that when the branches are terminated in their respective characteristic impedances, energy applied to one of the TEM or odd mode branches divides substantially equally between the intermediate



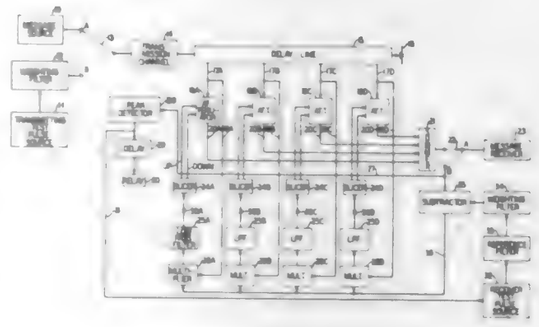
branches without reaching the other of the odd or TEM mode branches. With crystals terminating the respective intermediate branches a fifth terminal may be provided with a lead to the conducting strip for withdrawing energy at I–F frequency. In one embodiment of the invention the cavity is circularly cylindrical with circular end walls and a link coupling from the odd mode branch to the cavity. In another embodiment of the invention the cavity is essentially a portion of rectangular waveguide with the end walls comprising the broad walls of such a waveguide, and the odd mode branch comprises a rectangular opening for receiving energy from a rectangular waveguide of corresponding cross section.

3,375,472
BROADBAND STRUCTURES FOR WAVEGUIDE HYBRID TEE'S
Richard M. Walker, Chestnut Hill, Mass., assignor to Microwave Associates, Incorporated, Burlington, Mass., a corporation of Massachusetts
Filed June 6, 1966, Ser. No. 555,529
13 Claims. (Cl. 333—11)



12. An H-plane folded hybrid tee rectangular-waveguide junction comprising an E-plane arm, an H-plane arm, and two common arms folded in an H-plane bounded by their top wide walls in a first common plane and their bottom wide walls in a second common plane, so as to share a common junction region for each said arm bounded by said top and bottom wide walls, and means for matching each said arm at said region so that power fed into the E-plane arm divides into two equal components 180° out of phase in the common arms, power fed into the H-plane arm divides into two equal components in phase in the common arms and power fed into either common arm divides into two equal components in the E-plane arm and the H-plane arm, wherein the improvement comprises a plurality of electrically inductive means extending between the top and bottom wide walls across said common region symmetrically on either side of the E-plane arm in said region for reactively matching said E-plane arm to said common region, the geometry of an end wall of said region is adjusted for reactively matching said H-plane arm to said common region, said common arms are folded parallel and share a common narrow wall, and the remaining narrow walls of said common arms extend to said end wall to provide an enclosure for said common region which is substantially of uniform electrical width from said common arms to said end wall.

3,375,473
AUTOMATIC EQUALIZER FOR ANALOG CHANNELS HAVING MEANS FOR COMPARING TWO TEST PULSES, ONE PULSE TRAVERSING THE TRANSMISSION CHANNEL AND EQUALIZER
Robert W. Lucky, Red Bank, N.J., assignor to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed July 15, 1965, Ser. No. 472,146
9 Claims. (Cl. 333—18)



1. Apparatus for establishing optimum settings for the attenuators in a transversal equalizer intended for the correction of the frequency response characteristic of a band-limited transmission medium comprising

means at one end of said transmission medium transmitting a first series of test pulses through said medium and said equalizer,

means at the other end of said transmission medium generating a second series of test pulses in synchronism with said first series,

a reference filter having the frequency response characteristic desired for said transmission medium in tandem with said generating means,

means deriving an error signal from a comparison of said first and second series of test pulses,

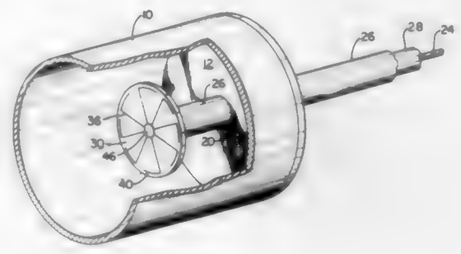
means correlating said error signal with the inputs to the individual attenuators of said equalizer over the interpulse period,

means determining the polarity of the outputs of said correlating means, and

means responsive to said determining means adusting the settings of said attenuators incrementally in a direction opposite to said polarity.

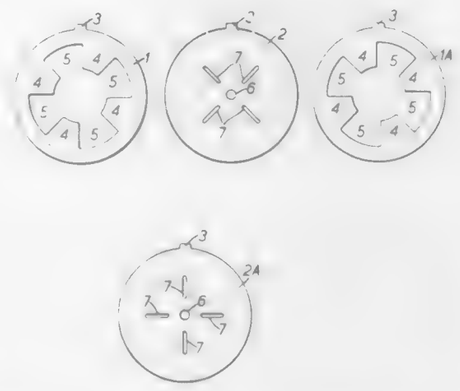
3,375,474
MICROWAVE WAVEGUIDE TO COAX COUPLING SYSTEM
Leonard W. Thompson, Golden, and Billie W. Preston, Littleton, Colo., assignors to Martin-Marietta Corporation, New York, N.Y., a corporation of Maryland
Filed Oct. 8, 1965, Ser. No. 494,189
15 Claims. (Cl. 333—21)

1. In a microwave transmission system, a hollow circular waveguide having an end wall closing one end thereof, a coaxial transmission line having an inner conductor and an outer conductor surrounding said inner conductor, said transmission line terminates within said waveguide with the end portion of said inner conductor extending along the central longitudinal axis of said waveguide, and means for coupling said transmission line and said waveguide and operable to propagate TE_{01} mode wave along said waveguide including feeder means comprising a plurality of feeder elements electrically con-



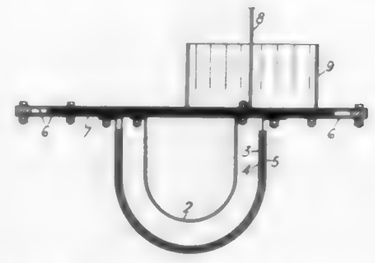
nected to said end portion of said inner conductor and extending radially therefrom in a plane normal to said longitudinal axis of said waveguide and antenna means electrically connected to the outer ends of said feeder elements and arranged in said plane such that the longitudinal axis thereof lies on the circumference of a circle in which said feeder elements are radii.

3,375,475
TRAVELLING WAVE TUBES AND WAVE TRANSMISSION LINES SUITABLE FOR USE THEREIN
Neville Wreford Harris, Great Baddow, Essex, England, assignor to English Electric Valve Company Limited, London, England, a British company
Filed Mar. 18, 1964, Ser. No. 352,914
Claims priority, application Great Britain, Mar. 25, 1963, 11,667/63
6 Claims. (Cl. 333—31)



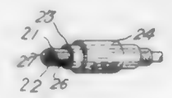
A wave retarding structure for a travelling wave tube having slot-coupled resonant wave guide sections constituted by relatively thick members and thin partition walls alternating in a stack. The thick members have equally circumferentially spaced inwardly projecting fingers and the partition walls have equally circumferentially spaced radial slots. Successive thick members are staggered circumferentially so that the inwardly projecting fingers of a thick member are opposite the space between two adjacent fingers in the next thick member, and successive partition walls are so staggered circumferentially that each slot in a partition wall is opposite the unslotted material between two adjacent slots in the next partition wall.

3,375,476
RADIOFREQUENCY HEATING APPARATUS
Christopher E. M. Tibbs, Wokingham, England, assignor to Radyne Limited, Wokingham, England, a British company
Filed Oct. 14, 1963, Ser. No. 315,913
12 Claims. (Cl. 333—76)



In order to reduce the harmonic content of radiofrequency energy in the load circuit of industrial high frequency heating equipment, the oscillator is inductively coupled to the output circuit and the inductive coupling is screened by at least two successive shields of continuous conductive sheet material which form a tunnel around the inductive coupling member. These shields together with the inductive coupling member form an electrical capacitance and function as both an electrostatic and an electromagnetic screen. The relationship between the resonant frequency of the screen and the fundametal frequency of the equipment is such that magnetically induced voltages at harmonics of the fundamental are substantially reduced in amplitude over magnetically induced voltages at the fundamental frequency.

3,375,477
OVERHEAT DETECTOR FOR ELECTRIC BLANKETS AND THE LIKE
Toshinobu Kawazoe, 14 Hongo-cho, Meguro-ku, Tokyo, Japan
Filed July 10, 1964, Ser. No. 381,749
Claims priority, application Japan, July 22, 1963, 38/37,034
7 Claims. (Cl. 338—26)

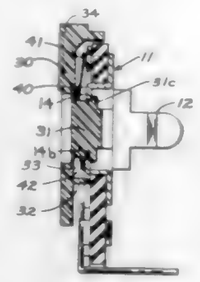


An overheat detection and signalling system for electric blankets, heating pads, and the like, in which thermosensitive material is disposed between and in contact with a pair of wires, for instance, a heater wire and an overheat control signal wire. The thermosensitive material used consists of metallic oxides, sulfides, or carbides suspended in an insulating matrix.

3,375,478
ELECTRICAL CONTROL AND METHOD OF MAKING THE SAME
John Van Benthuysen and Wayne A. Barden, Elkhart, Ind., assignors to CTS Corporation, Elkhart, Ind., a corporation of Indiana
Filed May 11, 1964, Ser. No. 366,542
10 Claims. (Cl. 338—174)

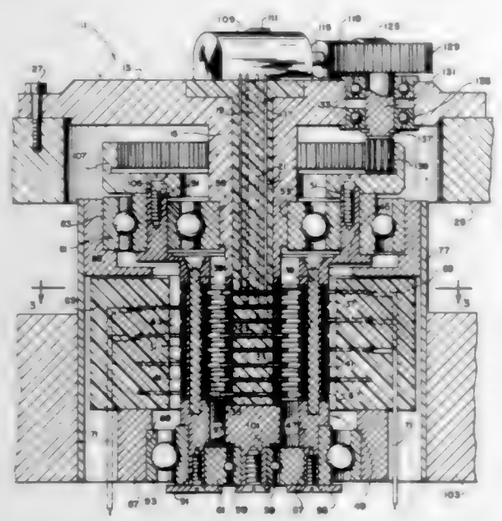
A variable resistance control having a resistance element supported on an electrically conductive bracket integral with a collector ring. A rotatable member is rotatably secured to the bracket with an electrically nonconductive heat-deformable shaft. The portion of the shaft journaled in an aperture provided in the bracket is

swaged to increase the diameter and improve the bearing fit between the shaft and the bracket. An annular ring integral with the rotatable member slideably engages the resistance element for stabilizing the rotatable



member relative to the resistance element and an equalizing contactor pivotally supported by a pair of arms is nestedly disposed in the space between the shaft and the annular ring.

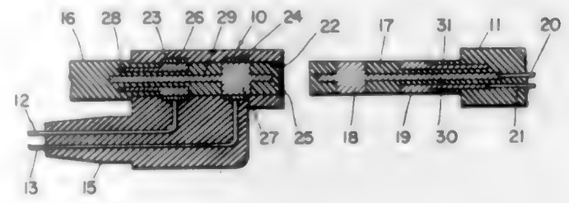
3,375,479
CONTINUOUS TURNING SLIP RING ASSEMBLY
Estel G. Lowe, 7803 Milton St., Huntsville, Ala. 35802
Filed Nov. 2, 1965, Ser. No. 506,137
8 Claims. (Cl. 339—5)



The invention relates to a slip ring assembly having inner and outer peripheral surfaces which serve as electrical contacts for brushes. One set of brushes is located between a central normally stationary part and the slip rings so that the brushes engage the inner surface of the slip rings. The other set of brushes is located between an oscillating part and the slip rings so that the brushes engage the outer surface of the latter.

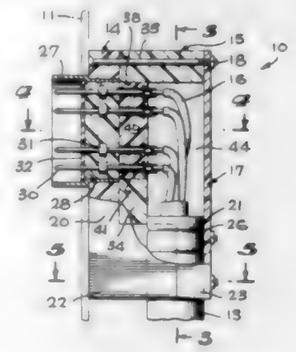
3,375,480
BLIND PLUG FOR USE WITH A FLUID PROOF CONNECTOR
Arthur L. Nelson, San Diego, Calif., assignor to Winsco Instruments & Controls Company, Inc., a corporation of California
Filed Dec. 15, 1965, Ser. No. 513,974
3 Claims. (Cl. 339—38)

This disclosure relates to a blind plug for underwater use with fluid proof connectors such as shown in United States Patent 3,277,424. This connector comprises a cylindrical socket body open at both ends and arranged to receive a power plug in one end in the form of a cylindrical plug body. The plug body and interior cylindrical wall of the socket include contact means which will engage when the cylindrical plug is received within one end of the cylindrical socket. The fit is snug so as to provide a fluid proof connection. The blind plug on the other hand is receivable in the other end of the socket when the power plug is not being used and the blind plug includes contact means for engaging the socket contact



but the contact means in the blind plug terminates wholly within the plug so that no electrical energy can pass from the blind plug. With the blind plug inserted in the socket, the power plug may be inserted in the one end and engage the blind plug to urge it out the other end as the power plug is positioned in the socket such that a complete fluid proof connection can be effected without ever exposing the socket contact to the fluid environment.

3,375,481
CABLE CONNECTOR
Roger M. Parnell, Huachuca City, Ariz., assignor to The Bunker-Ramo Corporation, Stamford, Conn.
Filed Apr. 1, 1966, Ser. No. 539,411
6 Claims. (Cl. 339—94)

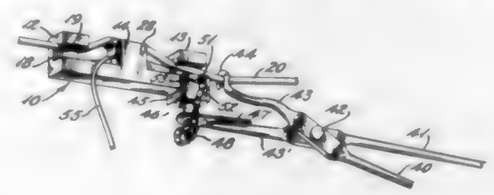


A connector useful for connecting the lead ends of a multilead cable to a socket receptacle. The connector is comprised of a pin member having a wall supporting a plurality of contact elements extending therethrough. The first ends of the contact elements are intended to be received in the socket receptacle. The second ends of the contact elements extend into open first ends of tubular contacts in a socket member. The second ends of the tubular contacts are connected to the cable lead ends, as by soldering. A cover member is fastened to the pin member with the socket member and cable being clamped therebetween.

3,375,482
TELEPHONE LINE CONNECTOR
Charles A. Cole, Rte. 4, Box N–156, Hattiesburg, Miss. 39401
Filed Mar. 31, 1966, Ser. No. 539,125
7 Claims. (Cl. 339—109)

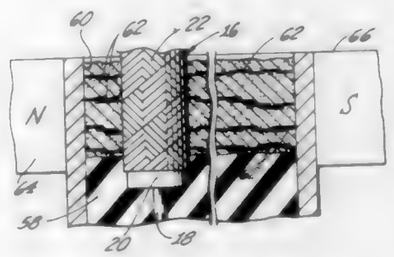
1. A telephone line clamp comprising a body member, said body member having central and end portions, said end portions each forming a generally hook shaped

recess, said recesses being substantially parallel and substantially in alignment with each other, whereby their bights lie generally along a common axis and face in the same direction, a clamping member mounted on said central portion and having a recess which faces generally in the direction opposite to that of said bights, said clamping member recess being positioned outwardly of said body member with respect to said bights, whereby a conductor line which passes through said bights may have its intermediate portion offset for reception in the



recess of the clamping member, and whereby tension in the conductor line which is so positioned causes the intermediate portion of the conductor line to transmit force against said clamping member, said clamping member being mounted for movement outwardly of said body member to permit insertion of a conductor lead between said clamping member and said central portion, said conductor lead retained in such position when a conductor line under tension is engaged by said bights and said clamping member recess.

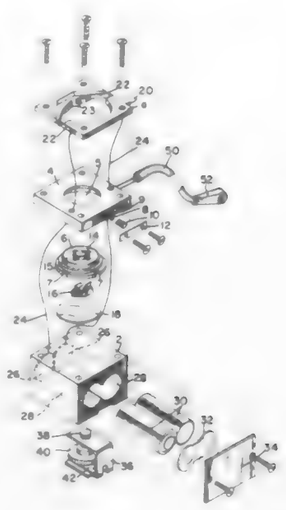
3,375,483
ELECTRICAL CONNECTOR
John J. Phillips, Rolling Hills, Calif., assignor to Gray & Huleguard, Santa Monica, Calif., a corporation of California
Filed Aug. 3, 1966, Ser. No. 569,938
3 Claims. (Cl. 339—143)



The present invention relates to electrical connectors for use with a cable having electrically conductive shielding that must be grounded. In the embodimnet of the invention disclosed the space where the cable or bundle of wires enters the connector is filled with a sealing mixture containing a large number of magnetically conductve particles. A magnetic field is maintained across the sealing mixture while it hardens whereby the magnetic particles are attracted together to form a large number of electrically conductive paths which extend between the shielding and the connector. After the sealing mixture has hardened all of the particles are maintained bonded into the conducting relationship.

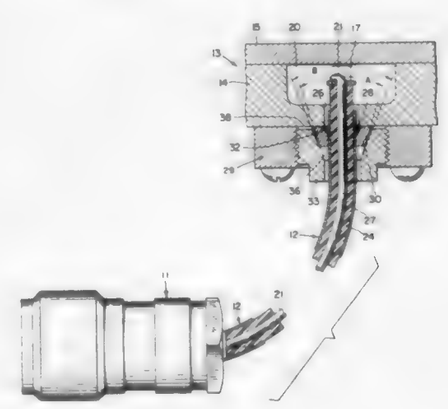
3,375,484
PHOTOFLASH ADAPTER
Ronald G. Petts, Williamsport, and George W. Parsons, Hughesville, and William T. Colville, Williamsport, Pa., assignors to Sylvania Electric Products Inc., a corporation of Delaware
Filed Oct. 23, 1965, Ser. No. 503,402
2 Claims. (Cl. 339—147)

An adapter for a flashcube in which a flashcube socket is rotatably disposed within a socket retainer mounted on the top face of a base member and a face plate carrying electrical contacts is mounted on the socket retainer



with the electrical contacts overlying the socket retainer and being disposed adjacent to the socket.

3,375,485
COAXIAL CABLE CONNECTOR
John C. Donohue, Hanover, and Richard A. Ashburn, Glen Burnie, Md., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Filed Mar. 16, 1965, Ser. No. 440,336
2 Claims. (Cl. 339—177)



This is an apparatus for electrically connecting a coaxial cable to a strip transmission line located within a hollow casing composed of electrically conductive material. The cable is secured to the casing by a split conical clamping ring forced against the outer conductor of the cable by a nut having a threaded exterior and a conical interior recess.

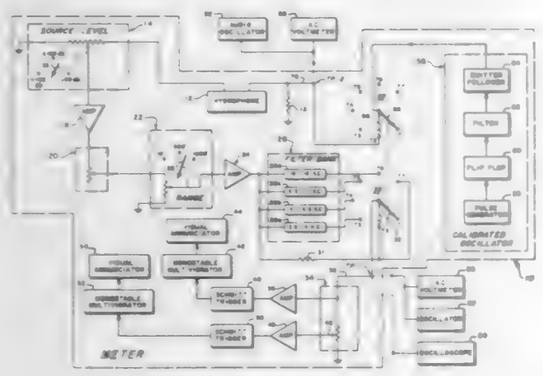
3,375,486
ELECTRICAL MALE CONNECTOR
John C. Clayton, Morristown, N.J., assignor to Aircraft Radio Corporation, Boonton, N.J., a corporation of New Jersey
Filed Dec. 7, 1965, Ser. No. 512,070
3 Claims. (Cl. 339—252)

This invention relates to a male electrical connector connector is fabricated of a single piece of resilient elec-

trically conductive metal. Use of a non-conductive center for use in conjunction with printed circuit boards. The

pin provides structural rigidity and allows easy insertion and withdrawal of the connector from a circuit board.

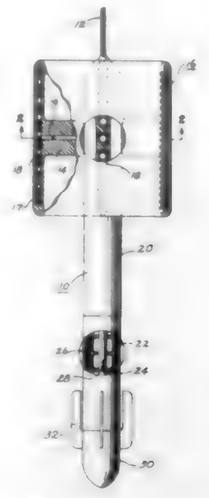
3,375,487
RADIATED POWER LEVEL METER
Oliver H. McDaniel and James H. Prout, State College, Pa., assignors, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Filed June 24, 1966, Ser. No. 560,931
17 Claims. (Cl. 340—5)



A meter for measuring the radiated power level at the source of energy radiated by a remotely located sonar transducer including a hydrophone, a pair of threshold circuits having respective precalibrated threshold levels for driving respective indicators in response to an input signal, a range potentiometer for attenuating the hydrophone output signal in accordance with the spacing of the hydrophone from the transducer, and a source level potentiometer having an associated dial calibrated in units of radiated power level which is adjusted until the hydrophone output signal level is additionally attenuated a sufficient degree so that the level of the input signal applied to the threshold circuits lies intermediate the precalibrated threshold levels.

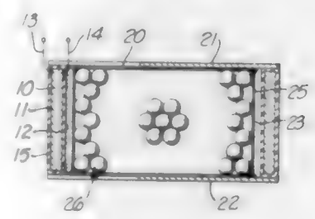
3,375,488
UNDERWATER TRANSDUCER CONFIGURATION
Robert M. Bridges, Northridge, and Wilbur Nerenstein, North Hollywood, Calif., assignors to The Bendix Corporation, a corporation of Delaware
Filed Nov. 3, 1966, Ser. No. 591,830
8 Claims. (Cl. 340—8)

An underwater transducer configured for high speed descent into the water and ascent out of the water having an elongated cylindrical body with fins at its lower end, a transmitter section near the fins containing a number of axially arranged transducer elements, a large diameter cylindrical receiver section fastened to the body



near its upper end by means of hollow struts, the receiver section containing a plurality of receiving transducer elements arranged and connected electrically in axially-aligned groups, and electronic signal processing means in said body.

3,375,489
PRESSURE COMPENSATED TRANSDUCER
Harry W. Kompanek, 153 Rametto Road, Santa Barbara, Calif. 93103
Filed Mar. 14, 1966, Ser. No. 534,022
12 Claims. (Cl. 340—11)

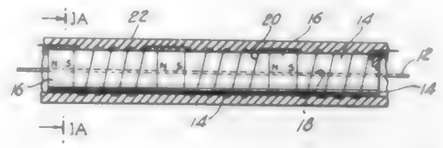


A transducer particularly suited for operation in deep water. A ring of piezoelectric or magnetostrictive material with a core disposed within and spaced from the ring permitting exposure of both faces of the ring to the water, with the core having a sound velocity lower than that of the water. An alternative structure utilizing a disc with both faces exposed to the water and with a core spaced from one face. Another alternative structure utilizing a piece of foam rubber as the core, with the foam rubber attached to one face of the ring or disc and with the other surfaces of the rubber exposed to the water.

3,375,490
FLEXIBLE CABLELIKE TRANSDUCER
Steven A. Stubblefield and Robert L. Douglas, Houston, Tex., assignors to Texaco Inc., New York, N.Y., a corporation of Delaware
Filed Nov. 17, 1965, Ser. No. 508,296
10 Claims. (Cl. 340—17)

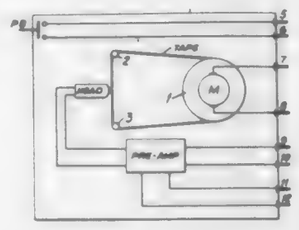
1. A flexible elongated cablelike transducer of substantially uniform outer circumference along its length for responding to seismic signals comprising, a flexible central stress member, permanent bi-polar magnetic elements and

resilient spacers strung alternately on said central stress member, a continuous electrical conducting means passing through the magnetic field of each of said permanent magnets at substantially right angles thereto and forming a coil about said magnetic elements and spacers, seismic signal responsive means for providing relative motion between said magnetic field and said electrical conducting



means passing therethrough in response to a seismic signal thereby inducing a voltage in said winding indicative of said seismic signal, and a resilient outer sheath surrounding said central stress member, magnetic elements, resilient spacers, and electrical conducting means, said outer sheath extending along the entire length of said cablelike transducer.

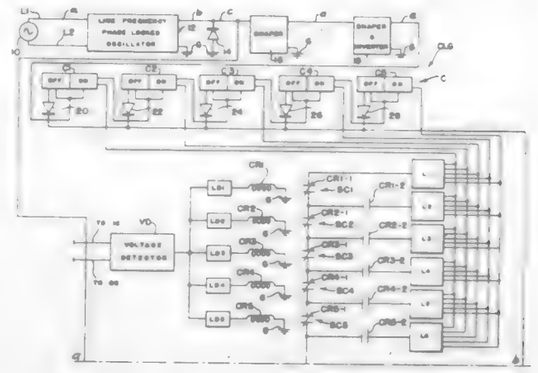
3,375,491
ELEVATOR CAR ANNOUNCING SYSTEM
Stephen A. Hornung, Louisville, Ky., Lloyd L. Riggs, New Albany, N.Y., and James H. Stichweh, Louisville, Ky., assignors to K. M. White Company, Inc., Louisville, Ky., a corporation of Kentucky
Filed June 7, 1965, Ser. No. 461,951
10 Claims. (Cl. 340—19)



An elevator car announcing system including an array of message storage modules each including an endless storage media initiated by an elevator command to extract the stored message. The module controls its own output and resets the initiating circuit by virtue of a superposed 40 cycle tone on the message. A unique ladder network of relays insures that remaining circuits are disenabled during the functioning of each elevator command.

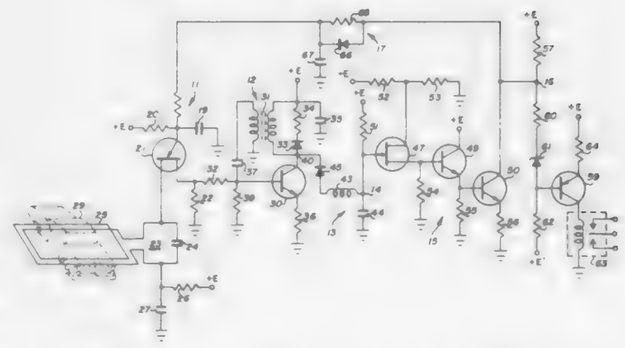
3,375,492
FREQUENCY GENERATOR
Lawrence E. Calsyn, East Moline, Ill., and Robert W. Lewis, St. Louis, Mo., assignors to E. W. Bliss Company, Canton, Ohio
Filed Sept. 1, 1964, Ser. No. 393,657
9 Claims. (Cl. 340—35)

A frequency generator which is particularly applicable for use as a portion of a master traffic controller for providing cycle length determining signals for application to local traffic controllers. To this end, there is provided a frequency signal generating means, such as a phase locked oscillator, connected to a commercial alternating current power supply source, for continuously generating a frequency signal having a fixed frequency synchronized with the line frequency of the commercial power supply source. A counter serves to continously count the pulsations of the generated frequency signal and provide an output count signal representative of the number of pulsations counted. A count selector serves to pass a predetermined count signal which is representative of a predetermined count of pulsations of the frequency signal. A bistable device, such as a bistable multivibrator circuit, is changed from one stable state to the other by successive predetermined count signals. On-off switching means, such as a silicon controlled rectifier, is alternately on and off in accordance with the stable condi-



tions of the bistable device. The on-off switching means serves to alternately connect and disconnect an output circuit with a source of energy so that the output circuit carries a signal having a frequency which is dependent on the predetermined count signal, and which frequency is synchronized with the line frequency of the commercial power source.

3,375,493
INDUCTIVE LOOP PRESENCE DETECTOR
Irving M. Gottlieb, Menlo Park, Calif., assignor to General Precision Systems Inc., a corporation of Delaware
Filed June 30, 1965, Ser. No. 468,201
6 Claims. (Cl. 340—38)

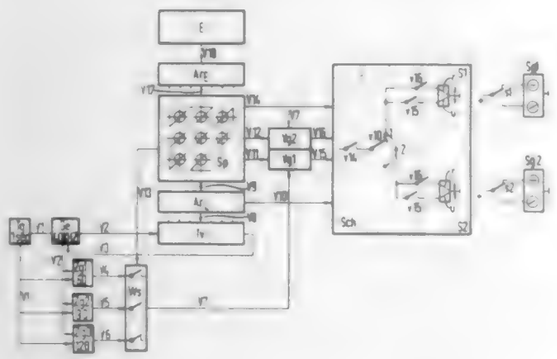


1. A system for detecting the presence of vehicles comprising an oscillator having an inductive element positioned in spaced relation with a path for vehicles, a monostable circuit coupled to the oscillator for generating constant duration pulses having a repetition rate determined by the oscillator, an integrating circuit coupled to the monostable circuit for generating a direct potential level corresponding to the repetition rate of the constant duration pulses, an output means coupled to the integrating circuit for generating an output signal responsive to the direct potential level.

3,375,494
CONTROL UNITS FOR PROGRAMMED OPERATION OF TRAFFIC SIGNALS
Jans Piening, Soecking, Bavaria, and Walter Wimmer, Munich, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany
Filed Dec. 22, 1964, Ser. No. 420,367
4 Claims. (Cl. 340—40)

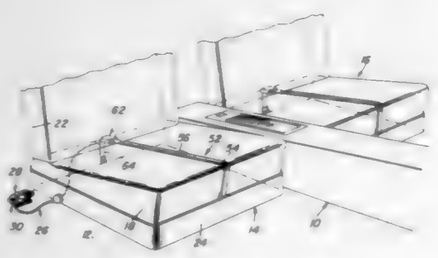
A traffic signal unit for programming the operation of a plurality of sets of traffic signals having lamps con-

trolled by lamp switches, comprising a storage register having storage elements disposed in a plurality of groups which form respective storage cells for storing switching programmes for the lamps of the individual signal sets, a pulse generator, at least one pulse counter operatively connected to said generator for counting pulses from said pulse generator, means for effecting a sampling of each cell once between successive pulses from such pulse counter, a comparator operatively connected to such a



cooperable pulse counter and said register for comparing the information in each sampled cell with the pulse count contained such cooperable pulse counter at the time when that cell is sampled, and means for transmitting a signal to control the actuation of lamp switches of the traffic signal sets when the pulse count applied to the comparator corresponds to the sampled information applied to the comparator.

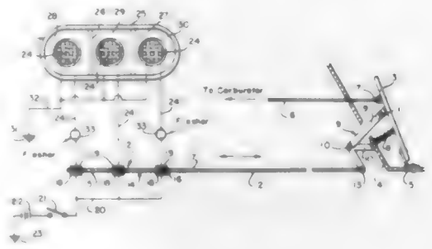
3,375,495
SEATBELT ALARM SYSTEM
Joel A. Burns, 4201 Broadmoor NE., Albuquerque, N. Mex. 87108
Filed Feb. 12, 1965, Ser. No. 432,126
6 Claims. (Cl. 340—52)



A seatbelt alarm system for a motor vehicle operable to render an alarm in response to positioning of the seat belt assemblies of the vehicle in other than the prescribed operative positions but only when the associated seat is occupied by a person.

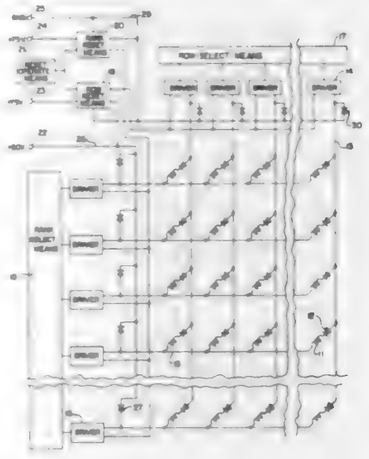
3,375,496
DECELERATION INDICATOR FOR MOTOR VEHICLES
Anthony J. Antunovic, Lake Drive W., Inverness, Fla. 32650
Filed Aug. 23, 1965, Ser. No. 481,502
4 Claims. (Cl. 340—72)

A signalling device for motor vehicles incorporated in an electrical circuit adapted to be energized and display a warning signal when the operator of the vehicle removes his foot from the accelerator pedal, said signalling device being mounted at the rear of the vehicle in a position to be readily visible to the driver of a following vehicle; and



wherein the electrical circuit associated with the device is independent of the conventional warning signals with which the vehicle is equipped.

3,375,497
MATRIX CONTROL CIRCUITRY USING GATE CONTROLLED UNIDIRECTIONAL SIGNALLING DEVICES
Lowery K. Jones, Jr., and James D. Turner, Dayton, Ohio, assignors to The National Cash Register Company, Dayton, Ohio, a corporation of Maryland
Filed Apr. 27, 1964, Ser. No. 362,854
6 Claims. (Cl. 340—166)

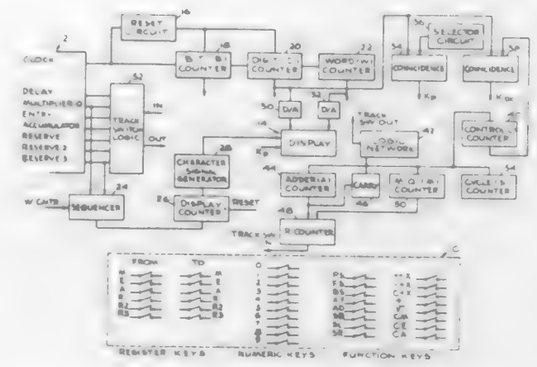


An apparatus for energizing selected ones of a plurality of solenoids arranged in a matrix formation. Energization of a selected solenoid is controlled by two coordinate groups of switching circuits, with one switching circuit in each group being operated to complete an energizing path for a selected solenoid. Each switching circuit includes a unidirectional signal translating device, such as a silicon controlled rectifier, which may be rendered conducting by means of a selection circuit, one of which is provided for each coordinate group of switching circuits. Each switching circuit is subsequently rendered non-conducting by a reset circuit to terminate energization of the selected solenoid.

3,375,498
CALCULATOR APPARATUS FOR DISTINGUISHING MEANINGFUL DIGITS
Thomas J. Scuitto, Malibu, and Matthew A. Alexander, Santa Monica, Calif., assignors to Wyle Laboratories, El Segundo, Calif., a corporation of California
Filed May 18, 1964, Ser. No. 376,606
7 Claims. (Cl. 340—172.5)

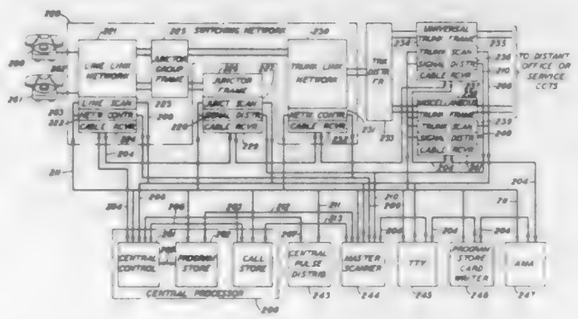
A calculating apparatus of the type having output display means and including means for visually distinguishing meaningful digits from non-meaningful digits. The apparatus includes means for automatically editing all of the

numbers stored in the various registers after the performance of most operations. Editing is comprised of examining each of the numbers and determining whether or not each digit thereof is meaningful. A tag is then associated with each of the meaningful digits. Any non-zero



digit is considered meaningful. Also, all digits positioned between the most significant digit in a number and the decimal point are considered meaningful and likewise all digits positioned between the least significant digit and the decimal point are considered meaningful.

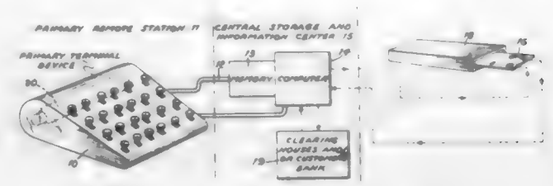
3,375,499
TELEPHONE SWITCHING SYSTEM CONTROL AND MEMORY APPARATUS ORGANIZATION
Hugo Ghiron, Colts Neck, John A. Harr, Fair Haven, and Nicholas A. Martellotto, Red Bank, N.J., assignors to Bell Telephone Laboratories, Incorporated, New York, N.Y., a corporation of New York
Filed Oct. 14, 1964, Ser. No. 403,845
5 Claims. (Cl. 340—172.5)



A program controlled telephone switching system which employs a generic program is disclosed. The use of a generic program facilitates the production of programs for telephone offices of a defined class and facilitates the testing, installation and growth of such offices. The physical organization of the program and the system data in memory at fixed and variable memory locations is illustrated.

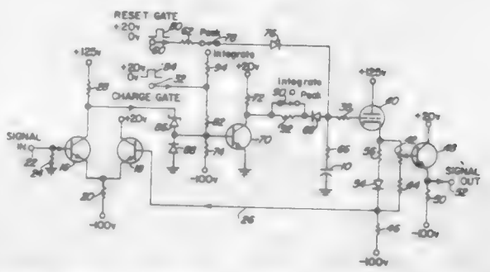
3,375,500
AUTOMATED ACCOUNTING SYSTEM
Peter H. Fowler, Midland Park, N.J., and William S. Litchman, New York, N.Y., assignors to International Telephone and Telegraph Corporation, Nutley, N.J., a corporation of Maryland
Filed Aug. 24, 1964, Ser. No. 391,494
17 Claims. (Cl. 340—172.5)

An automated data handling system having a centralized storage and computation center has at least one primary remote terminal point having means for transmitting to said storage and computation center infor-



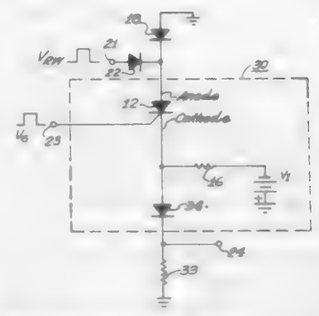
mation in the form of "tone" signals and means for registering said information in said storage and computation centers at selected times.

3,375,501
PEAK MEMORY CIRCUIT EMPLOYING COMPARATOR FOR CONTROLLING VOLTAGE OF STORAGE CAPACITOR
Samuel R. McCutcheon, Palo Alto, Calif., and Robert E. Webb, Portland, Oreg., assignors to Tektronix, Inc., Beaverton, Oreg., a corporation of Oregon
Filed Mar. 23, 1964, Ser. No. 354,019
8 Claims. (Cl. 340—173)



The subject matter of the present invention relates generally to circuits for storing electrical signal voltages, and in particular to memory circuits which may be operated as a peak memory to store maximum signal voltages. The present peak memory circuit employs a comparator for comparing the input signal voltage with a feedback reference voltage corresponding to the voltage on a storage capacitor to switch a gate in order to charge the storage capacitor from a source of D.C. supply voltage when such input signal voltage exceeds such reference voltage until the capacitor voltage is substantially equal to the maximum input signal voltage.

3,375,502
DYNAMIC MEMORY USING CONTROLLED SEMICONDUCTORS
Richard P. Shively, Los Angeles, Calif., assignor to Litton Systems, Inc., Beverly Hills, Calif.
Continuation-in-part of application Ser. No. 410,077, Nov. 10, 1964. This application Mar. 1, 1965, Ser. No. 436,002
33 Claims. (Cl. 340—173)



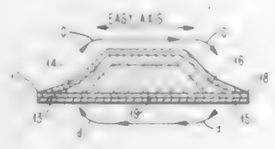
A dynamic memory device using semiconductor devices, such as controlled rectifiers, in memory circuits

wherein the content of a memory cell is signified by the impedance state of a semiconductor, including destructive or non-destructive readout circuit arrangements.

3,375,503
MAGNETOSTATICALLY COUPLED MAGNETIC THIN FILM DEVICES

Bruce I. Bertelsen, Poughkeepsie, N.Y., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York

Filed Sept. 13, 1963, Ser. No. 308,868
3 Claims. (Cl. 340—174)

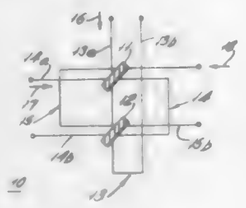


A multi-layer magnetic thin film device is provided exhibiting essentially closed flux path characteristics. Such a device has at least two separate magnetic layers, one of which has sloping sections, adjacent to a section parallel to the other film, which tends to approach and touch the other film such as to minimize the gap between films.

3,375,504
SYSTEM FOR INTERROGATING AND DETECTING THE STORED INFORMATION OF MAGNETIC CORES

Hiroshi Ihara, Tokyo, Japan, assignor to Nippon Electric Company Limited, Tokyo, Japan, a corporation of Japan

Filed Jan. 23, 1964, Ser. No. 339,772
Claims priority, application Japan, Jan. 29, 1963, 38/3,978
10 Claims. (Cl. 340—174)



This invention teaches a memory system having comparison interrogation capability performed in such a manner as to provide non-destructive readout of the memory devices.

Each bit of a word stored in the memory system is stored in a memory means which is comprised of two magnetic cores per stored bit. The cores preferably have similar substantially square hysteresis characteristics, but the squareness of the characteristic and the identical characteristics for each pair of cores is not an absolute necessity toward successful operation of each bit storage means. In order to store a first binary state a first of the cores is driven to a magnetization state which is relatively close to a zero magnetization state and in any case is appreciably less than the positive saturation level of the core. The remaining core of the two core per bit memory is driven to a negative magnetization state which is quite close to the negative saturation state of the core. An interrogation winding is provided which is threaded through said cores in the same direction so that a unidirectional current passing through said drive winding will drive both cores in the same sense. A readout winding is threaded through both cores in opposite directions so that any change in state of the magnetic cores which are being driven in the same sense by a current in the drive winding will be inductively coupled to the sense winding in opposite directions so that some portion of one of the induced currents will operate to cancel the other induced current as a result of a change of state in the two magnetic cores.

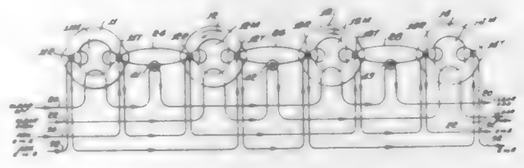
In order to interrogate the two core per bit memory and establish whether a comparison or lack of comparison exists between the bit in memory and a bit in an external source, a single cycle sinusoidally varying signal is applied to the drive or interrogation winding. The state of the external bit is identified by the magnitude and direction of the sinusoidal one cycle current pulse. For example, a first binary state is represented by the pulse initially going positive at the beginning of the one cycle pulse from a zero reference level. The opposite binary state is represented by the leading edge of the pulse initially going negative. The cores of the two core per bit storage means can likewise be altered from the manner described above to represent the other bit state by reversing the magnetization states set forth above.

If comparison exists between the state of the stored bit and the external bit the sense winding will generate a single cycle sinusoidally varying pulse which is substantially in phase with the interrogating drive pulse. If the stored bit and external bit are of differing binary states the single cycle sinusoidally varying pulse generated in the sense winding will be substantially 180° out of phase with the interrogation driving pulse.

3,375,505
MAGNETIC FLUX TRANSFER IN CORE SYSTEMS

Douglas C. Engelbart, Palo Alto, Calif., assignor to AMP Incorporated, Harrisburg, Pa., a corporation of New Jersey

Original application Oct. 30, 1959, Ser. No. 849,776, now Patent No. 3,163,854, dated Dec. 29, 1964. Divided and this application June 9, 1964, Ser. No. 373,763
4 Claims. (Cl. 340—174)



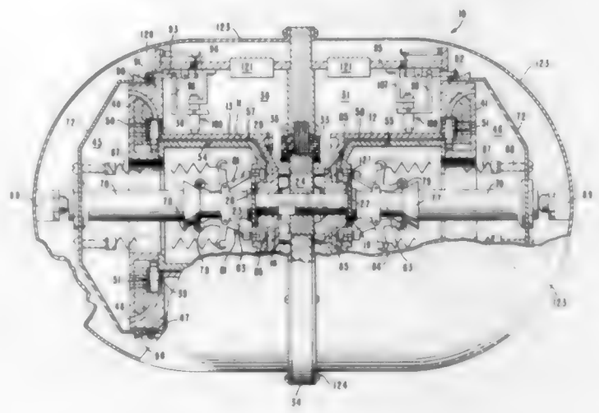
A magnetic core shift register is described in which multi-aperture magnetic cores are employed. Each of these cores has the cross-sectional area of the magnetic core material adjacent its minor apertures which is larger than the cross-sectional area of the magnetic material around the main aperture of the multi-aperture core.

3,375,506
MAGNETIC DRUM ASSEMBLY WITH AIR BEARINGS

Lawrence Bruehl, Vestal, N.Y., assignor to International Business Machines Corporation, New York, N.Y., a corporation of New York

Filed June 15, 1961, Ser. No. 117,461
18 Claims. (Cl. 340—174.1)

1. A magnetic drum assembly comprising a generally cylindrical magnetic drum having a magnetizable outer periphery, a support member nestingly received in closely spaced relation within said magnetic drum to define a pair of end spaces and a longitudinal generally circumferential space between said support member and said magnetic drum, said end spaces being positioned at the ends of and extending generally normally to said longitudinal space, a high pressure chamber, impeller means mounted on and rotatable with said magnetic drum, said impeller



means forcing fluid into said high pressure chamber when said magnetic drum is rotated, and passageway means interconnecting said high pressure chamber and said spaces to provide longitudinal and end thrust fluid bearings for supporting said magnetic drum from said support member.

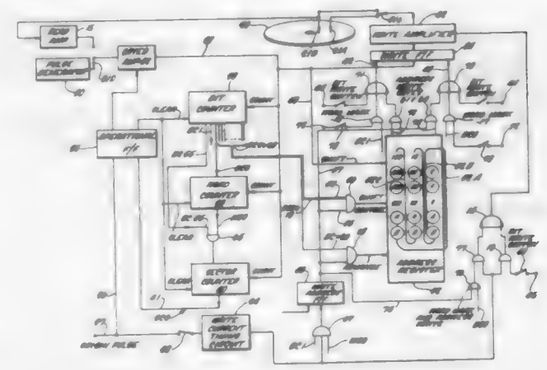
3,375,507
INFORMATION ADDRESS RECORDING AND RETRIEVAL SYSTEM

Ralph A. Gleim, Pasadena, Erwin A. Hauck, Arcadia, and Richard C. Simonsen, South Pasadena, Calif., assignors to Burroughs Corporation, Detroit, Mich., a corporation of Michigan

Continuation-in-part of application Ser. No. 306,365, Sept. 3, 1963. This application Mar. 13, 1967, Ser. No. 649,752
40 Claims. (Cl. 340—174.1)

A method for recording and retrieving data from a storage means which may conveniently be a disk of a disk file computer is disclosed which comprises the steps of assigning one portion of the storage means as an information portion, in which sector of words are to be written or read. A separate clock portion of the storage means is utilized to record signals in one track which mark the location of all of the words in a sector. Further recorded in the same track with the word mark signals is an absolute address signal which follows the word mark signal immediately preceding the word mark signal of the first word of the record identified by the absolute address signal. Also disclosed is a memory storage means which is formated by the described method. In conjunction with the memory disk is an information storage and retrieval system which comprises means for addressing the memory with the absolute address of a record to be located; means for recovering from the clock portion the absolute address of the addressed record together with means for recovering the word mark signals following the absolute address. When the addressed address and the recovered address are the same, a priming condition is applied to an information gate which is connected to a read-write head located at the information portion of the memory disk. When interlaced words of information are stored in the sectors of a memory disk in accordance with this invention, the gate is maintained in a primed condition and responds to the next word mark recovered from the clock portion of the memory disk by transferring the first information word relative to the memory disk. Means are disclosed for opening and closing the continually primed gate once for every other information word of the interlaced sector. Means are also disclosed for reading absolute addresses during the word intervals in which information is not being transferred relative to the memory disk.

Also disclosed is a method of recording and retrieving data from a storage means such as a memory disk in which the same clock and information portions are assigned and wherein the information words of one record successively follow each other in an information sector. Recorded in one track of a clock portion of the memory disk are marking signals which mark in advance the location of the first information word in each record, each marking signal is followed by an absolute address signal in the same track with the marking signal which absolute address signal identifies the next upcoming record. The end of the address signal is synchronized with the end of the record immediately preceding the next upcoming record which is the record identified by the address. A memory disk having a format in accordance



with the described method for successive word sectors is disclosed together with an associated information recording and retrieval information system in which means are disclosed for receiving an address of a record to be located in the disk, comparing the sought after address with the recovered addresses, and applying a priming signal to an information gate connected to a read-write head when both addresses are the same. Sensing means are associated with the address recovery means for sensing the end of the absolute address signal and in response thereto enable the previously primed gate to transfer the first and all subsequent words of the located record relative to the memory disk.

Information of the record to be translated relative to the memory disk is monitored by a second sensing means which is operative in response to the next marking signal in the clock portion and to the end of the record to be translated relative to the information portion for stopping information transfer and for returning the information system to an address searching mode of operation.

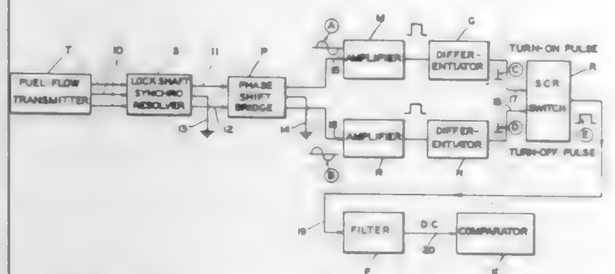
3,375,508
MEANS FOR CONVERTING A SYNCHRO SHAFT ANGLE TO A LINEAR DIRECT CURRENT SIGNAL

Robert J. Molnar, New York, and Walter Parfomak, Brooklyn, N.Y., assignors to The Bendix Corporation, Teterboro, N.J., a corporation of Delaware

Filed Dec. 31, 1964, Ser. No. 422,766
19 Claims. (Cl. 340—198)

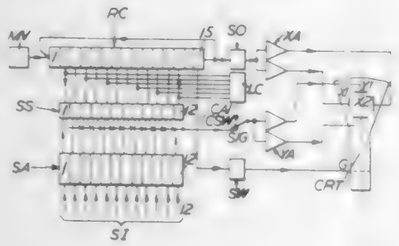
A converter for converting two alternating current voltages phase separated in accordance with the angular position of a synchro shaft to a direct current output which varies linearly in accordance with the phase separation of the alternating current signals. The converter includes means for converting the alternating current signals to pulses time separated in accordance with the phase sepa-

ration of the signals for controlling conduction of a silicon controlled rectifier in the interval between the pulses.



A filter connected to the silicon controlled rectifier provides a direct current output which varies linearly with the phase separation of the alternating current signals.

3,375,509
PLURAL PARAMETERS MONITOR DISPLAYING INFORMATION SIGNALS AS A BAR GRAPH ON A CATHODE-RAY TUBE
Alfred John Mullarkey, London, England, assignor to International Standard Electric Corporation, New York, N.Y., a corporation of Delaware
Filed Nov. 23, 1964, Ser. No. 413,017
Claims priority, application Great Britain, Dec. 3, 1963, 47,659/63
10 Claims. (Cl. 340—213)

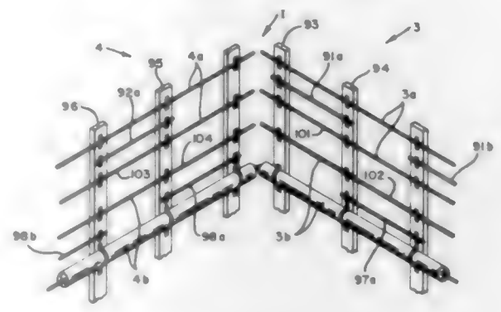


A number of measurements being monitored are displayed as horizontal line segments on a cathode-ray tube—a vertical display control circuit disposes each line segment at the same vertical location when the respective measurement is of correct or predetermined value thereby forming a straight line. Deviations from a required measurement value immediately stand out because of its displacement from the straight line.

3,375,510
MEANS FOR INDICATING THE PASSAGE OF A FAULT CURRENT ALONG A CONDUCTOR
Brian Edward Pitches, Balerno, Midlothian, Scotland, assignor to Ferranti, Limited, Lancashire, England, a company of Great Britain and Northern Ireland
Filed Dec. 29, 1964, Ser. No. 421,944
Claims priority, application Great Britain, Jan. 10, 1964, 1,144/64
12 Claims. (Cl. 340—253)

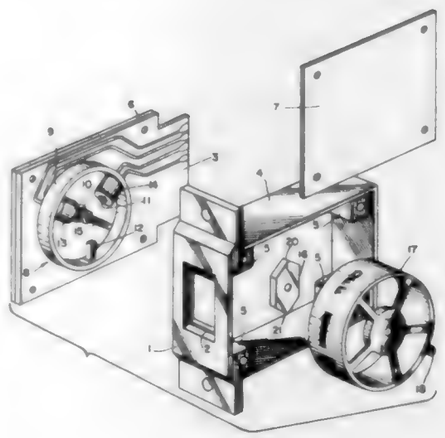
A fault indicating apparatus is adapted to be mounted to a conductor of an electric power line such that a vane of magnetic material secured to a rotatable spindle responds to the magnetic lines of force of the current passing through the conductor. The vane is initially constrained in a position which is not tangential to the magnetic lines of force passing through the pivotal axis of the vane when a normal electric current passes along the conductor. In the presence of a fault current, the vane is rotated to a position which is substantially tangential to the magnetic lines of force of the current.

3,375,511
TRANSMISSION LINE INTRUDER DETECTION SYSTEM
Melvin E. Trimble, San Jose, Craig G. Roberts, Cupertino, and Bernard S. Golosman, Palo Alto, Calif., assignors to Sylvania Electric Products Inc., a corporation of Delaware
Filed June 24, 1965, Ser. No. 466,612
22 Claims. (Cl. 340—258)



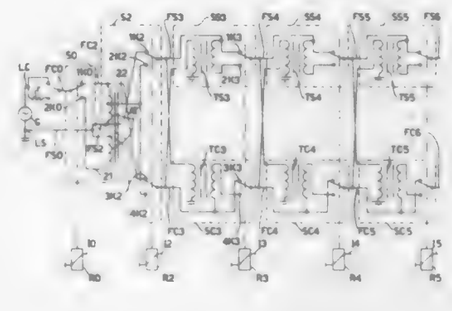
1. In a transmission line perimeter intruder detection system, a transmission line comprising
a pair of stacked rigid conductors bounding an area to be protected,
a plurality of posts supporting said conductors, said posts being spaced a quarter wavelength apart at a predetermined frequency,
a plurality of barrier members located between said conductors, said barrier members being secured to adjacent support posts and extending between alternate spaces between said posts, and
an impedance connected between said conductors at one end thereof, said impedance having a value substantially equal to the characteristic impedance of said transmission line.

3,375,512
POWER-OFF INDICATOR
John A. Watkins, Cheshire, and Elliot R. Laug, Hamden, Conn., assignors to Patwin, Inc., a corporation of Connecticut
Filed Mar. 19, 1965, Ser. No. 441,193
4 Claims. (Cl. 340—373)



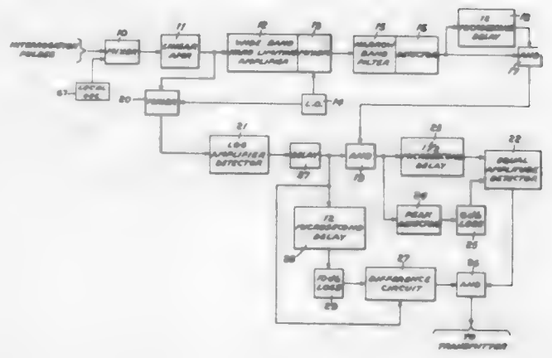
1. An indicator comprising:
(1) a panel having a window for displaying data;
(2) a rotor having a permanent magnet and a drum bearing symbols on its periphery, the permanent magnet having salient North and South magnetic poles, the drum being positioned to present the symbols in the window upon rotation of the rotor;
(3) a stator having a ferromagnetic anular core carrying a first inwardly protruding radial pole and a plurality of other inwardly protruding radial poles that are symmetrical with respect to the first radial pole, the other radial poles being secured within a 180° segment of the core and the first radial pole protruding from the opposite 180° core segment, the stator further including a plurality of windings arranged to permit each winding to be separately energized by an electrical signal, each winding being mounted upon a different one of the other radial poles; and
(4) means supporting the rotor so that the permanent magnet is within the enclosure of the annular core.

3,375,513
DIGITAL-TO-ANALOG CONVERTER
Joseph Elbling, Ivrea, Italy, assignor to Ing. C. Olivetti & C., S.p.A., Ivrea, Italy, a corporation of Italy
Filed Mar. 5, 1965, Ser. No. 437,370
Claims priority, application Italy, Mar. 12, 1964, 5,811/64
5 Claims. (Cl. 340—347)



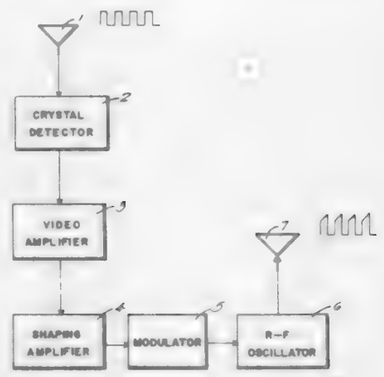
1. A digital-to-analog converter comprising:
(a) *n* input terminals for receiving a group of *n* bits representing in pure binary code a number to be converted, said number representing an angle equal to the sum of partial angles represented by said bits respectively,
(b) an ordered group of *n* sine stages associated with said input terminals respectively and each one having an input and an output and including transformer means,
(c) an ordered group of *n* cosine stages associated with said input terminals respectively and each one having an input and an output and including transformer means,
(d) means for connecting the input of said sine and cosine stage to the output of the next preceding sine and cosine stage respectively,
(e) a relay connected to each input terminal for being energized according to the value of the bit signal received thereon,
(f) switching means in said sine and cosine stage operated by said relay and modifying said transformer means for varying the impedance between the corresponding input and output an amount corresponding to the relevant partial angle,
(g) a sine output terminal and a cosine output terminal,
(h) a source of alternate current having a first and second output terminals,
(i) means for connecting the output of the last sine and cosine stage to said sine and cosine output terminal respectively,
(j) and means for connecting the input of the first sine and cosine stage to said first and second output terminals respectively.

3,375,514
RECEIVING STATION FOR RADIO NAVIGATION SYSTEM
Jesse S. Le Grand, Clifton, N.J., assignor to International Telephone and Telegraph Corporation, Nutley, N.J., a corporation of Maryland
Filed Feb. 23, 1966, Ser. No. 529,462
10 Claims. (Cl. 343—6.5)



A receiver station for a radio navigation system such as TACAN having means for adjacent channel rejection, echo suppression and precision half-amplitude finding of an incoming pulse signal.

3,375,515
PULSED TRACKING RANGE RADAR DECEPTION SYSTEM
Eugene B. Novikoff, East Meadow, N.Y., assignor, by mesne assignments, to the United States of America as represented by the Secretary of the Navy
Filed Apr. 18, 1955, Ser. No. 502,252
2 Claims. (Cl. 343—6.8)

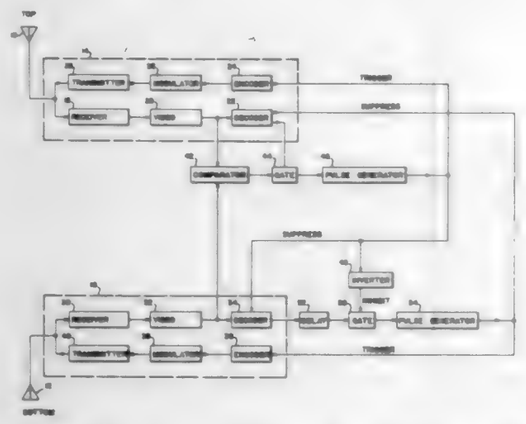


1. In a transponder combination including signal receiving, detecting and amplifying means, means for converting a received signal into a trapezoidal-shaped pulse having a leading edge that is greater in amplitude than the received signal and a trailing edge that is greater in amplitude than the leading edge; and means for transmitting said pulse toward the direction from which the received signal emanated.

3,375,516
DUAL ANTENNA SYSTEM FOR TRANSPONDER BEACON DEVICES

Gerald E. Hart, Washington, D.C., and Charles E. Quigley, Chevy Chase, Md., assignors to the United States of America as represented by the Secretary of the Navy

Filed May 26, 1967, Ser. No. 643,023
10 Claims. (Cl. 343—6.8)



Transponder system having dual antennas. Different switching arrangements whereby transponder response is through antenna selected on basis of intercepted signal strength.

3,375,517
PHASE-CHANGE RATE DETECTOR

Paul D. Rodgers and Bernard A. Beaulieu, Fort Wayne, Ind., assignors to International Telephone and Telegraph Corporation

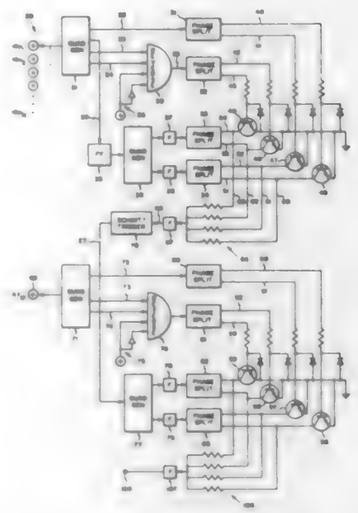
Filed Oct. 15, 1958, Ser. No. 767,480
15 Claims. (Cl. 343—8)

6. In a pulsed radar system, a range rate detecting circuit comprising: a first input circuit for receiving first pulses in time coincidence with the pulses transmitted by said system; a first oscillator having an output circuit for providing a first sinewave output signal, said first input circuit being coupled to said first oscillator whereby oscillation thereof is initiated responsive to each of said first pulses; a second input circuit for receiving the echo pulses received by said system; a second oscillator having an output circuit for providing a second sinewave output signal having approximately the same frequency as said first output signal, said second input circuit being coupled to said second oscillator whereby oscillation thereof is initiated responsive to each of said echo pulses; an adding circuit coupled to said first and second oscillator output circuits for adding said first and second output signals to provide a signal having its amplitude responsive to the phase relationship of said first and second output signals; a detector circuit coupled to said adding circuit for detecting the envelope of said last-named signal; and a filter circuit coupled to said detector whereby a range rate signal is provided having a frequency responsive to the rate of change of the time delay between said first and echo pulses.

3,375,518
DOPPLER SIGNAL SIMULATOR

Arthur H. Mader, Mount Vernon, and Stanley King, Larchmont, N.Y., assignors to General Precision Systems Inc., a corporation of Delaware

Filed Jan. 26, 1967, Ser. No. 611,853
9 Claims. (Cl. 343—17.7)



An apparatus for simulating the demodulated audio Doppler return resulting from an antenna signature comprising both lobe-switching and beam-switching characteristics. Preselecting a value for ν, the simulated Doppler shift frequency, and utilizing a novel cascaded single sideband modulation technique, discrete frequncies are initially generated at

$$\nu \pm \frac{p}{8}$$

with suitable circuit logic being provided to alternately switch these frequencies at the simulated lobing frequency rate. The discrete frequency products

$$\nu \pm \frac{p}{8}$$

are then used to modulate a simulated intermediate frequency f_{IF}, yielding

$$f_{IF} \pm \nu \pm \frac{p}{8}$$

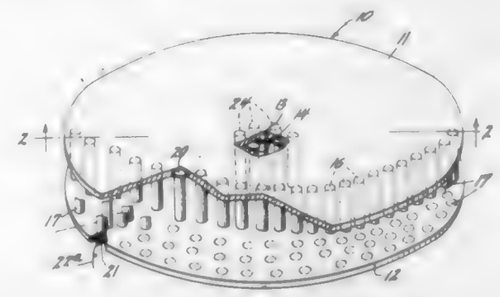
with the upper and lower frequencies surounding f_{IF} being alternately switched at a predetermined rate equal to the beam switching frequency being simulated. Finally, low-pass noise is wrapped around each discrete frequency by a balanced modulator to generate simulated audio Doppler spectra.

3,375,519
SCANNING REFLECTOR

Fred E. Burnham, Silver Spring, Md., assignor to Litton Industries of Maryland, Incorporated, College Park, Md.

Filed May 19, 1960, Ser. No. 30,136
22 Claims. (Cl. 343—100)

21. A two dimensional antenna beam focusing mechanism that is electrically variable both in configuration and in spatial orientation with respect to an antenna feed comprising: a support, a plurality of discrete members spaced apart from one another in fixed positions with respect to said support over a two dimensional region, each member being normally nonconducting and being individually energizable to become conducting, an antenna feed means fixed in position with respect to said support, and switch control means for selectively energizing different ones of

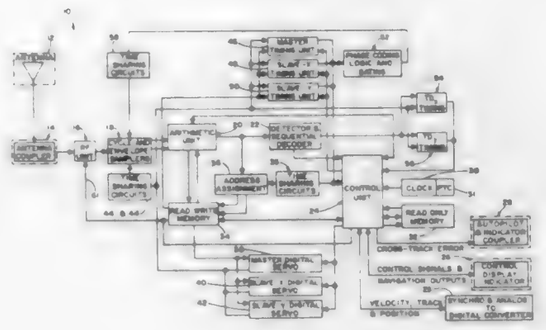


said members in preselected groups to variably synthesize both the shape of the antenna beam and the orientation of the beam in space.

3,375,520
INTEGRATED NAVIGATION RECEIVER-COMPUTER

Loren E. De Groot, Ann Arbor, and Joseph A. Parini, Arlan R. Van Koevering, William F. Roth, and Robert A. Racy, Grand Rapids, Mich., assignors to Lear Siegler, Inc.

Filed May 7, 1965, Ser. No. 454,033
24 Claims. (Cl. 343—103)

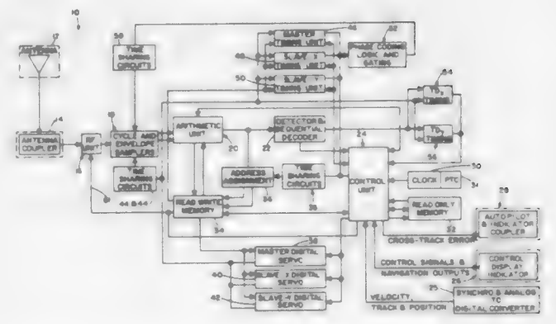


A unitary, integrated navigation instrument in which RF receiving and sampling operations and hyperbolic coordinate conversion operations are provided by time-sharing functional component groupings forming a sampler stage or section, an arithmetic unit, a memory, and a detector and sequential decoder section with a basic RF tuning unit and with each other through the operation of a control unit including timing and priority circuits, to form an instrument which does not have a separate receiver and a computer-converter, but which nonetheless performs the functions of both. Also, the computer operation so provided will compute the approximate maximum strength of signals to be initially received from a transmitting station complex, based upon present position information which is known to the pilot and inserted by him into the computer, to provide computed control signals to the receiver operation which initialize or preset the latter to greatly facilitate signal search and acquisition. Such control signals are connected into attenuation and gain-controlling circuitry in the RF tuner to effect signal attenuation and gain control in accordance with the expected strength of the signals for that particular initial position before the signals have actually been acquired. Also, the computer operation computes the approximate hyperbolic time differences to be expected for that particular approximated initial position and these are coupled to the component groupings in the instrument forming the timing units which under actual tracking conditions will continuously measure the true time differences from the signals actually received, to preset the time-measuring circuitry for faster and more accurate initial acquisition of the signals to be received.

3,375,521
DOPPLER COMPENSATED NAVIGATION SYSTEM

Loren E. De Groot, Ann Arbor, and Joseph A. Parini, Arlan R. Van Koevering, William F. Roth, and Robert A. Racy, Grand Rapids, Mich., assignors to Lear Siegler, Inc.

Filed May 7, 1965, Ser. No. 454,073
17 Claims. (Cl. 343—103)



A unitary, integrated navigation instrument in which RF receiving and sampling operations and hyperbolic coordinate conversion operations are provided by time-sharing functional component groupings forming a sampler stage or section, an arithmetic unit, a memory and a detector and sequential decoder section with a basic RF turning unit and with each other through the operation of a control unit including timing and priority circuits, to form an instrument which does not have a separate receiver and a computer-converter, but which nonetheless performs the functions of both. Also, the computer operation so provided will compute the approximate Doppler shift undergone by signals to be initially received from a transmitting station complex, based upon present position information which is known to the pilot and inserted by him into the computer, and upon present aircraft velocity information preferably inserted into the computer by a typical synchro and analog to digital converter, based on standard aircraft velocity-indicating instrumentation. The computed expected Doppler shift is the basis of computed control signals which are coupled to the receiver operation and used to initialize or preset the latter, to greatly facilitate signal search and acquisition. This initializing or presetting is preferably accomplished through digital servo loops wherein the reference signals for sampling the received waves are generated, by phase-shifting such reference signals. These digital servo loops are also used after signal search and acquisition has been completed, i.e., during tracking operations, to continuously reset or update the reference signals which dictate and control the sampling operation.

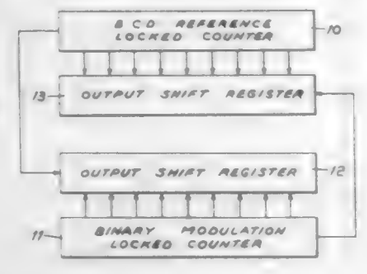
3,375,522
DIGITAL BEARING MEASURING SYSTEM

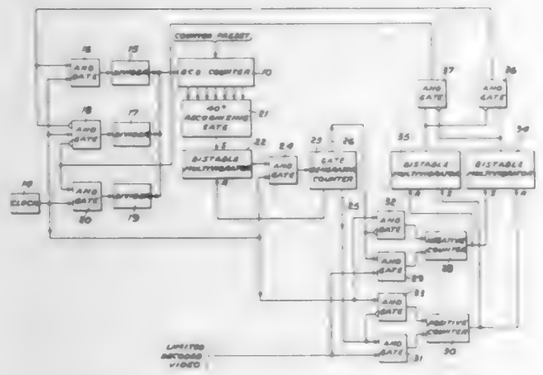
John B. Kennedy, Montville, N.J., assignor to International Telephone and Telegraph Corporation, Nutley, N.J., a corporation of Maryland

Filed Feb. 1, 1966, Ser. No. 524,106
12 Claims. (Cl. 343—106)

A receiver for a digital Tacan bearing measuring sys-

tem in which two counters are frequency and phase locked to the reference bursts and the bearing envelope,





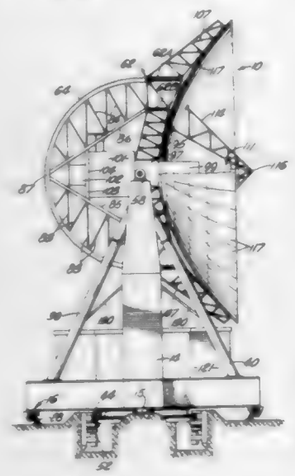
respectively, such that the count difference between the two counters continually represents bearing.

3,375,523

ANTENNA STRUCTURE MOVABLE IN AZIMUTH AND ELEVATION DIRECTIONS

Jerry Laibson, San Diego, Calif., assignor to Whittaker Corporation, Los Angeles, Calif., a corporation of California

Filed Oct. 16, 1964, Ser. No. 404,469
6 Claims. (Cl. 343—765)



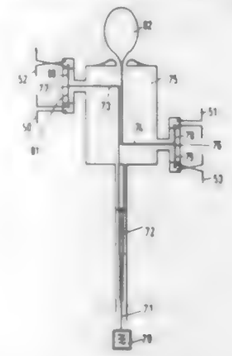
A parabolic reflector is mounted for movement in either azimuth or elevation or both simultaneously. The elevation axis is close to the center of gravity of the antenna system for minimizing inertial effects and drive requirements, with a single centrally located large sector elevation gear and other equipment being mounted as a part of the reflector counterweight. A circular gear is mounted on the turntable directly over a pit housing and is engaged by an azimuth drive system. The turntable supports a tripod type tower which allows adjustment in elevation of the reflector over a large range. The reflector alternatively instead of being supported on a tripod type tower may be supported on a yoke.

3,375,524

ANTENNA DISTRIBUTOR CIRCUIT FOR FOUR DIPOLES WITH ADJACENT DIPOLES IN PHASE QUADRATURE

Friedrich Künemund and Helmut Laub, Munich, Germany, assignors to Siemens Aktiengesellschaft, Munich, Germany

Filed Oct. 9, 1964, Ser. No. 402,752
Claims priority, application Germany, Oct. 10, 1963, S 87,802
5 Claims. (Cl. 343—799)



A distributor circuit for plural load devices fed in the rotary field of a polydirectional antenna having phase differences of 90° in the adjacent load devices including a 3-db directional coupler connected in the main feed line, and connecting lines of equal length for opposite load devices connected to distributor points from the directional coupler.

3,375,525

CENTER FED WIRE ANTENNA WITH SHEET REFLECTOR AND IMPEDANCE MATCHING COUPLING TO COAXIAL TRANSMISSION LINE

Ronald E. Fisk and Jose Perini, Syracuse, N.Y., assignors to General Electric Company, a corporation of New York

Filed June 16, 1965, Ser. No. 464,442
9 Claims. (Cl. 343—863)

1. An antenna system comprising:
a pair of conductors each extending in opposite directions from a common region,
a reflector spaced in radiative relation with said pair of conductors to provide an antenna having a predetermined input impedance,
a transmission line for providing energization to said antenna having a characteristic impedance lower in value than the input impedance of said antenna,

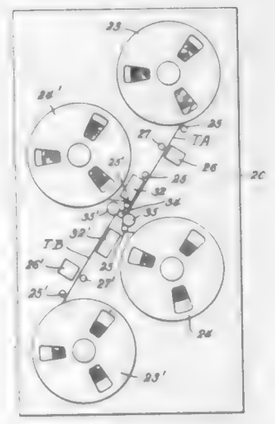
means for connecting one terminal of said transmission line to said reflector,
means for connecting the other terminal of said transmission line to adjacent ends of said radiative conductors in said common region,
said means including a conductor being so formed and in spaced relation to said reflector to form a transmission line tapered in impedance from said input impedance to said characteristic impedance.

3,375,526

FAULT RECORDER WITH DUAL MAGNETIC TAPES

Alexander Finlay, Springfield, Ill., assignor to Sangamo Electric Company, Springfield, Ill., a corporation of Delaware

Filed May 6, 1966, Ser. No. 548,188
17 Claims. (Cl. 346—44)



1. In a fault recording system for recording faults on electric power lines and the like, a first and a second magnetic tape, tape control means for continually enabling one of said tapes to record, a fault sensor for sensing faults on the electric power line including means for transmitting said fault to the effective one of said tapes for recording thereon, marking means for marking the location of the fault on said tape, fault sensing means responsive to said fault sensor to operate said marking means, a time code generator for providing coded signals representing at least the time of day, and fault time recorder means responsive to said fault sensor for enabling said generator means to provide the coded signals to the effective one of said tapes whenever a fault is being recorded.

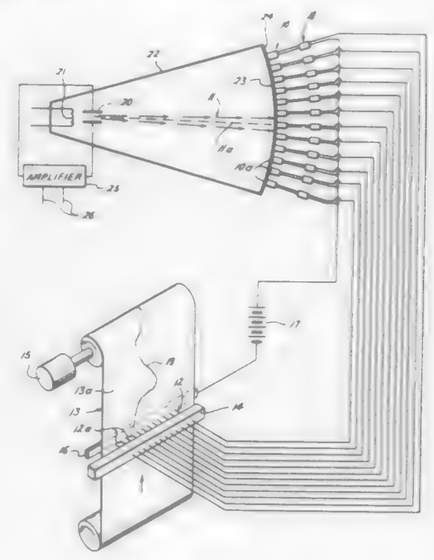
3,375,527

RECORDING APPARATUS

Nicholas N. Zirbel, Houston, Tex., assignor to Independent Exploration Company, Houston, Tex., a corporation of Texas

Continuation-in-part of application Ser. No. 81,086, Jan. 6, 1961. This application Oct. 26, 1964, Ser. No. 406,339
7 Claims. (Cl. 346—74)

1. Apparatus for recording variations in an electrical potential comprising: means for producing an energy beam, means for deflecting said energy beam in accordance with changes in said electrical potential, a plurality of spaced sensing means situated in the path of said energy beam, each capable of producing an electric signal when activated by the beam, the several sensing means being disposed at least close enough to adjacent sensing means relative to the effective width of the beam so that the beam in deflecting from activation of one sensing means toward activation of the next adjacent sensing means will activate such next adjacent sensing means before ceasing to activate said one sensing means, whereby at least one of said sensing means will be so activated at any given position of the energy beam, and recording means including a record sheet, a plurality of closely spaced electrically actuated marking elements mounted adjacent to the sheet and aligned in one direction thereacross and capable of producing an indication thereon when actuated, each of said marking elements being connected with certain of said sensing elements and being



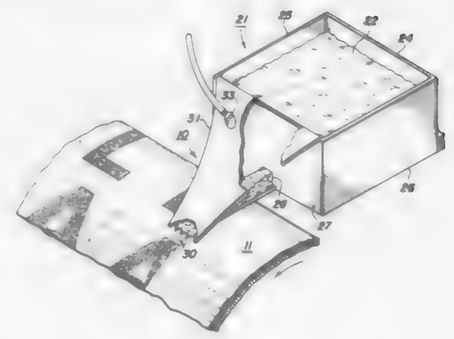
actuated to place indications on the record sheet in response to the electric signal emitted from each such sensing element whenever the sensing element is activated, and means for imparting to said record sheet continuous movement past said marking elements in a direction transverse to their alignment whereby at least one of said marking elements will be actuated to so mark the record sheet for any given position of the energy beam and the record produced on said record sheet will be continuous in the direction of movement of said sheet.

3,375,528

RECORDING PEN HAVING A PLURALITY OF CLOSELY SPACED WIRES

Uldis Klavsons, Penfield, and James E. Kennedy, East Rochester, N.Y., assignors to Xerox Corporation, Rochester, N.Y., a corporation of New York

Filed May 7, 1965, Ser. No. 453,960
21 Claims. (Cl. 346—140)



A liquid ink recording apparatus which deposits ink on a recording surface when the surface tension of the ink is overcome by an electrical signal wherein the ink dispensing means includes closely spaced wires extending to the recording surface from an ink reservoir and which retain ink by surface tension in the spaces between the wires.

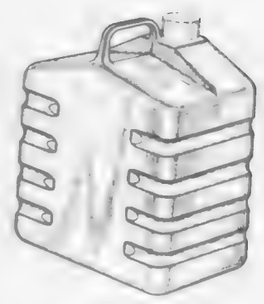
DESIGNS

MARCH 26, 1968

210,567
HOLDER FOR A CONTAINER FOR A BACTERICIDAL COMPOSITION
Angelo V. Stanziale, Iselin, N.J., assignor to Johnson & Johnson, a corporation of New Jersey
Filed Nov. 24, 1965, Ser. No. 88,212
Term of patent 14 years
(Cl. D4—3)

210,568
JUG
Harold J. Vanderhyde, North Merrick, N.Y., assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Jan. 11, 1967, Ser. No. 5,376
Term of patent 14 years
(Cl. D9—42)

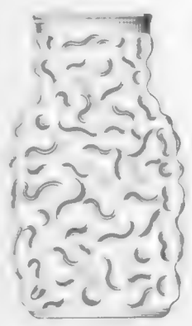
210,569
PLASTIC JUG
Norman A. Kelly, Wayne Township, Koscuisko County, Ind., assignor to Haskon, Inc., Warsaw, Ind., a corporation of Delaware
Filed Jan. 16, 1967, Ser. No. 5,440
Term of patent 14 years
(Cl. D9—53)



210,570
JAR
John Brady Campbell, Paramus, N.J., assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Mar. 13, 1967, Ser. No. 6,177
Term of patent 14 years
(Cl. D9—86)

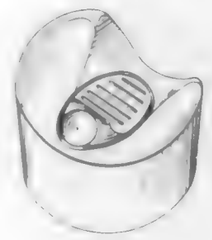
210,571
BOTTLE OR SIMILAR ARTICLE
Harold J. Vanderhyde, North Merrick, N.Y., assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Jan. 11, 1967, Ser. No. 5,389
Term of patent 14 years
(Cl. D9—87)

210,572
BOTTLE OR SIMILAR ARTICLE
Frank J. Benes, Lancaster, Ohio, assignor to Anchor Hocking Glass Corporation, Lancaster, Ohio, a corporation of Delaware
Filed Dec. 12, 1966, Ser. No. 5,005
Term of patent 14 years
(Cl. D9—100)

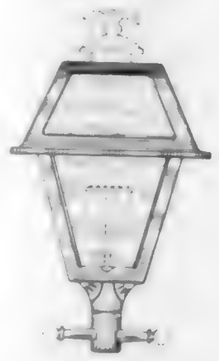


210,573
BOTTLE
Elio Inga, Viale Martiri della Benedicta 51, Serravalle Scrivia, Italy
Filed Feb. 28, 1967, Ser. No. 5,983
Claims priority, application Italy Oct. 21, 1966
Term of patent 3½ years
(Cl. D9—159)

210,574
DISPENSER TOP FOR A PRESSURE CAN
Robert Henry Abplanalp, Bronxville, and Victor Koenigsberg, Franklin Square, N.Y.; said Abplanalp assignor to Precision Valve Corporation, Yonkers, N.Y., a corporation of New York; said Koenigsberg assignor to Colgate-Palmolive Company, New York, N.Y., a corporation of Delaware
Filed Mar. 7, 1963, Ser. No. 73,867
Term of patent 14 years
(Cl. D9—275)



210,575
DOOR KNOCKER
Walter Koziol, Russell, Ill., assignor to Charmglow Manufacturing Co., Antioch, Ill., a corporation of Illinois
Filed Nov. 7, 1967, Ser. No. 9,315
Term of patent 14 years
(Cl. D10—7)



210,576
DOOR KNOCKER
Walter Koziol, Russell, Ill., assignor to Charmglow Manufacturing Co., Antioch, Ill., a corporation of Illinois
Filed Nov. 13, 1967, Ser. No. 9,377
Term of patent 14 years
(Cl. D10—7)

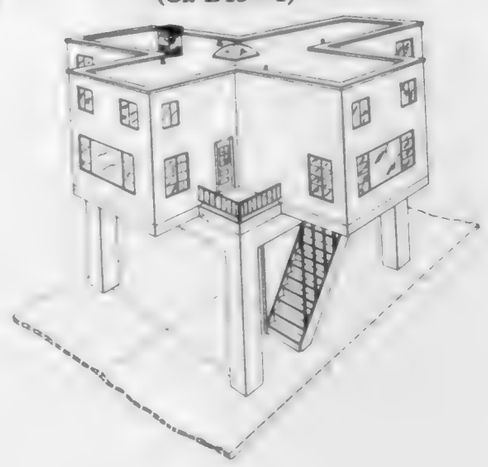
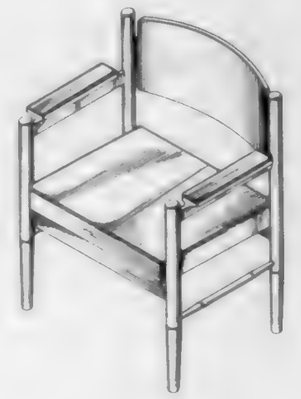
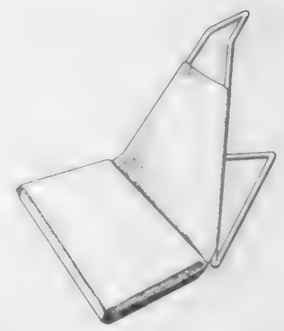
BUILDING
Ray C. Bender, P.O. Box 5265, Pittsburgh, Pa. 15206
Filed May 2, 1966, Ser. No. 2,103
Term of patent 14 years
(Cl. D13—1)



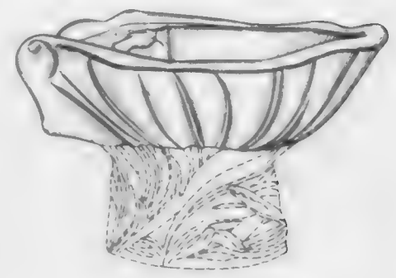
210,578
CHAIR
Eduardo F. Catalano, Cambridge, Mass., assignor to Massachusetts Institute of Technology, Cambridge, Mass., a corporation of Massachusetts
Filed Oct. 5, 1966, Ser. No. 4,171
Term of patent 14 years
(Cl. D15—1)



210,579
PORTABLE SEAT AND BACKREST COMBINATION
John M. Hehn, Hammett Acres, Anderson, S.C. 29621
Filed Feb. 13, 1967, Ser. No. 5,890
Term of patent 14 years
(Cl. D15—8)

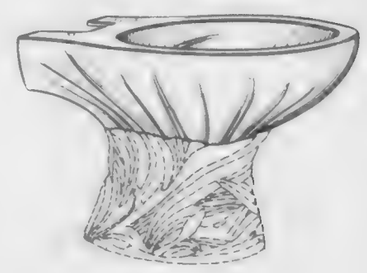


210,580
BOWL FOR A BIDET OR SIMILAR ARTICLE
Antonia Campi, Laveno Mombello, Italy, assignor to Società Ceramica Italiana Richard-Ginori Società per Azioni, Milan, Italy
Filed Oct. 7, 1966, Ser. No. 4,199
Claims priority, application Italy Apr. 7, 1966
Term of patent 14 years
(Cl. D23—51)



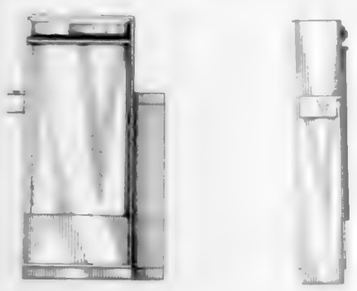
210,581
BABY TOILET TRAINER
Gladys M. Cantrell, 104 S. Johnson St., Alvin, Tex. 77511
Filed Apr. 6, 1967, Ser. No. 6,545
Term of patent 14 years
(Cl. D23—53)

210,582
BOWL FOR A TOILET OR SIMILAR ARTICLE
Antonia Campi, Laveno Mombello, Italy, assignor to Società Ceramica Italiana Richard-Ginori Società per Azioni, Milan, Italy
Filed Oct. 7, 1966, Ser. No. 4,201
Claims priority, application Italy Apr. 7, 1966
Term of patent 14 years
(Cl. D23—67)

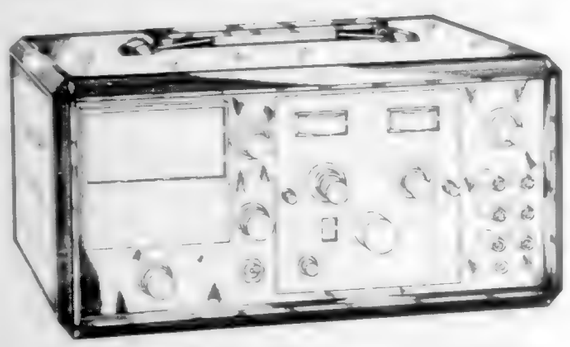


210,583
DENTAL IMPRESSION TRAY
Gaylon T. Westlund, 4732 Virginia Ave. N., Minneapolis, Minn. 55428, and Nels E. Neslund, 4241 N. Twin Oak Lane, Robbinsdale, Minn. 55422
Filed Mar. 28, 1967, Ser. No. 6,408
Term of patent 14 years
(Cl. D24—1)

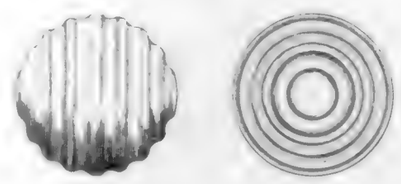
210,584
DENTAL CONSOLE
Milton R. Nielsen, Wheaton, and Richard A. Slouka, Carpentersville, Ill., assignors to American Hospital Supply Corporation, Evanston, Ill., a corporation of Illinois
Filed May 24, 1967, Ser. No. 7,255
Term of patent 14 years
(Cl. D24—1)



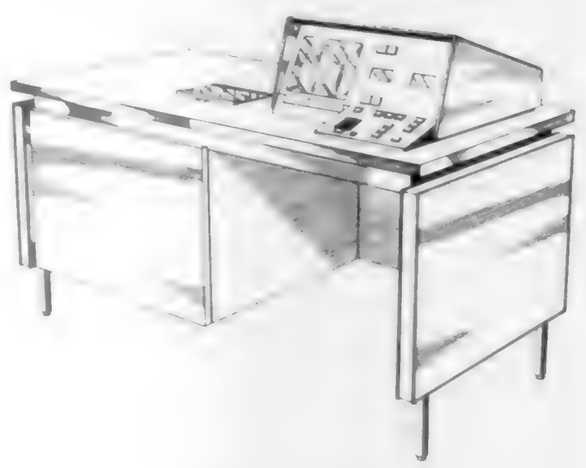
210,585
CARRYING CASE FOR ELECTRONIC EQUIPMENT AND THE LIKE
Frederic W. Jenkinson, Lafayette, Calif., assignor to Biotronics, Inc., Redding, Calif., a corporation of California
Filed Dec. 8, 1965, Ser. No. 115
Term of patent 14 years
(Cl. D26—1)



210,586
METAL BALL ANODE
Gerard Thomas Hodge, London, England, assignor to Mining & Chemical Products Limited, London, England, a British company
Filed Feb. 25, 1966, Ser. No. 1,177
Claims priority, application Great Britain Nov. 23, 1965
Term of patent 14 years
(Cl. D26—1)

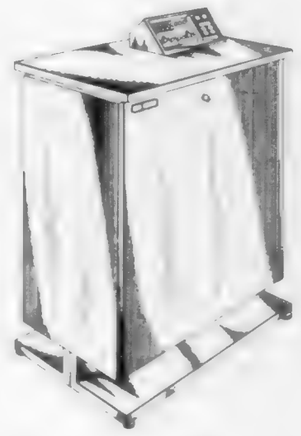


210,587
COMBINED DISPLAY AND CONTROL CONSOLE FOR AN INFORMATION FILING AND RETRIEVAL SYSTEM
Charles F. Grossman, Sunnyvale, Calif., and Marvin A. Southcott, Baltimore, Md., assignors to Ampex Corporation, Redwood City, Calif., a corporation of California
Filed Oct. 23, 1965, Ser. No. 87,826
Term of patent 14 years
(Cl. D26—5)

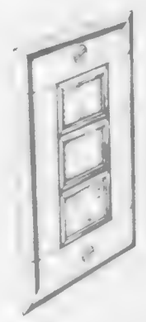


210,588
COMPUTER CONTROL CABINET OR SIMILAR ARTICLE
Charles N. Mazza, Framingham, Mass., assignor to Honeywell Inc., Minneapolis, Minn., a corporation of Delaware
Filed Dec. 16, 1966, Ser. No. 5,063
Term of patent 14 years
(Cl. D26—5)

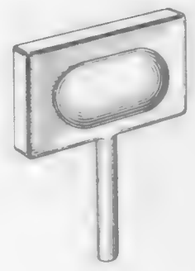
210,589
ELECTRONIC ADAPTER FOR FACSIMILE-COMPUTER SYSTEM
Robert E. Kalvitis, Fairport, N.Y., assignor to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed Mar. 20, 1967, Ser. No. 6,310
Term of patent 14 years
(Cl. D26—5)



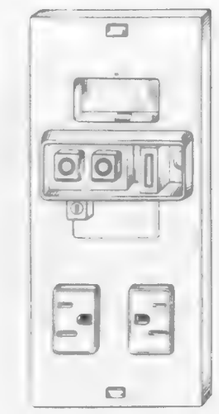
210,590
COMBINED ELECTRICAL FACE PLATE AND MODULAR INSERTS THEREFOR
Russell C. Edmisson, Bellflower, Calif., assignor to Sierra Electric Corporation, Gardena, Calif., a corporation of California
Filed June 22, 1966, Ser. No. 2,773
Term of patent 14 years
(Cl. D26—13)



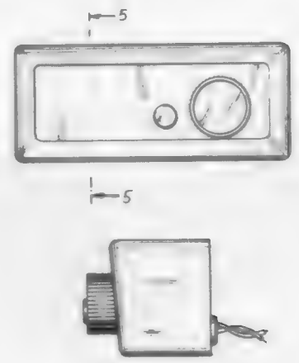
210,591
COMBINATION ELECTRICAL OUTLET AND CORD COVER
Tony Gonzalez, 510 E. 86th St., New York, N.Y. 10028
Filed Dec. 22, 1966, Ser. No. 5,155
Term of patent 14 years
(Cl. D26—13)



210,592
COVER PLATE FOR ELECTRICAL RECEPTACLES
Mario Paganelli, Varese, Italy, assignor to Bassani, S.p.A., Milan, Italy
Filed Dec. 20, 1966, Ser. No. 5,253
Claims priority, application Italy June 30, 1966
Term of patent 14 years
(Cl. D26—13)

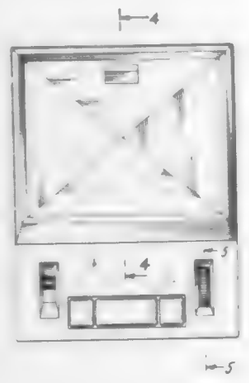


210,593
HEADLIGHT DELAY CONTROL
Robert D. Kahn, Rockville Centre, N.Y., assignor to Fedtro, Inc., Rockville Centre, N.Y., a corporation of New York
Filed Apr. 5, 1967, Ser. No. 6,739
Claims priority, application Japan Dec. 14, 1966
Term of patent 14 years
(Cl. D26—13)

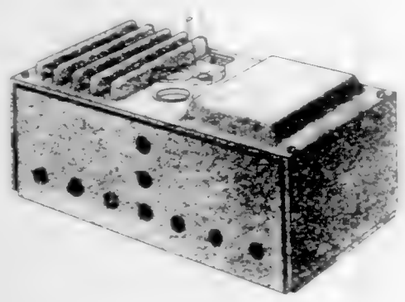


210,594
TAPE THREADER FOR TEMPORARILY SECURING MAGNETIC RECORDING TAPE IN A REEL
Henry J. Modrey, Eagle Drive, Stamford, Conn. 06903
Filed Dec. 13, 1966, Ser. No. 5,014
Term of patent 3½ years
(Cl. D26—14)

210,595
INTERCOMMUNICATIONS UNIT
Robert D. Kahn, Rockville Centre, N.Y., assignor to Fedtro, Inc., Rockville Centre, N.Y., a corporation of New York
Filed Dec. 19, 1966, Ser. No. 5,119
Claims priority, application Japan June 21, 1966
Term of patent 14 years
(Cl. D26—14)

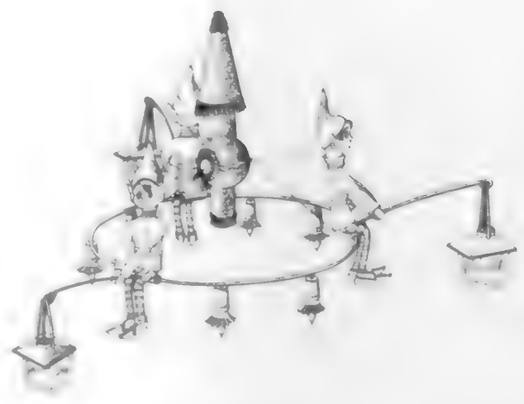


210,596
ELECTRONIC POWER SUPPLY CASE OR SIMILAR ARTICLE
Brant W. Becker, Sudbury, Mass., assignor to Gordon Engineering Company, Waltham, Mass., a limited partnership of Massachusetts
Filed June 7, 1967, Ser. No. 7,390
Term of patent 14 years
(Cl. D26—15)

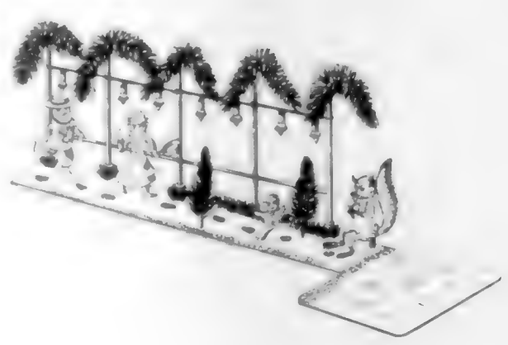


210,597
CHRISTMAS TREE ORNAMENT OR THE LIKE
Dario Moranduzzo, Via Aretina 161, Florence, Italy
Filed Sept. 22, 1966, Ser. No. 3,960
Term of patent 14 years
(Cl. D29—1)

210,598
CHRISTMAS MOBILE OR THE LIKE
Otto Kadmon and Alice Kadmon, both of 144—37 76th Road, Flushing, N.Y. 11367
Filed Feb. 10, 1967, Ser. No. 5,763
Term of patent 7 years
(Cl. D29—1)

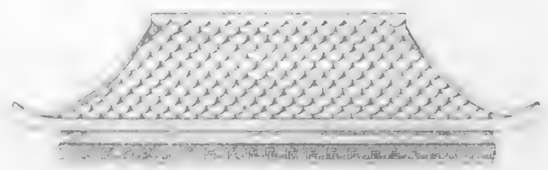


210,599
CHRISTMAS DECORATION OR THE LIKE
Otto Kadmon and Alice Kadmon, both of 144—37 76th Road, Flushing, N.Y. 11367
Filed Mar. 1, 1967, Ser. No. 6,008
Term of patent 7 years
(Cl. D29—1)

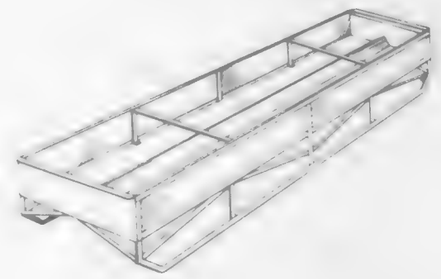


210,600
VASE
Charles H. Werner, Box 476, Pinedale, Wyo. 82941
Filed June 30, 1967, Ser. No. 7,665
Term of patent 14 years
(Cl. D29—28)

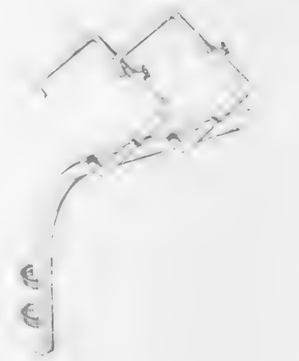
210,601
AQUARIUM COVER OR THE LIKE
Margie Lynn Blackwell, 6601 Corbin St., Houston, Tex. 77055
Filed Mar. 3, 1967, Ser. No. 6,054
Term of patent 14 years
(Cl. D30—12)



210,602
BUNK FEEDER
Furman E. Ott, Rte. 3, Laurens, S.C. 29360
Filed Mar. 13, 1967, Ser. No. 6,199
Term of patent 14 years
(Cl. D30—13)

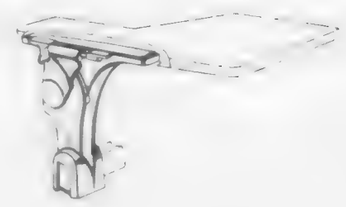


210,603
TELEVISION SET SUPPORT RACK
Albert E. Heimert III, Baltimore County, Md. (306 Weatherbee Road, Baltimore, Md. 21204)
Filed Oct. 28, 1965, Ser. No. 87,949
Term of patent 14 years
(Cl. D33—3)



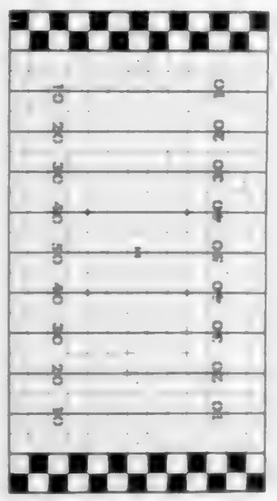
210,604
HOLDER FOR FIREWOOD CARRIER
Herbert R. Sanders, 12436 Elaine Drive, Des Peres, Mo. 63131
Filed Apr. 12, 1967, Ser. No. 6,654
Term of patent 14 years
(Cl. D33—3)

210,605
FOLDABLE SUPPORT FOR A CHAIR ARM TABLET
Lloyd L. Anderson, Rockford, Ill., assignor, by mesne assignments, to Amerock Corporation, Rockford, Ill., a corporation of Connecticut
Filed Aug. 1, 1966, Ser. No. 3,299
Term of patent 14 years
(Cl. D33—11)



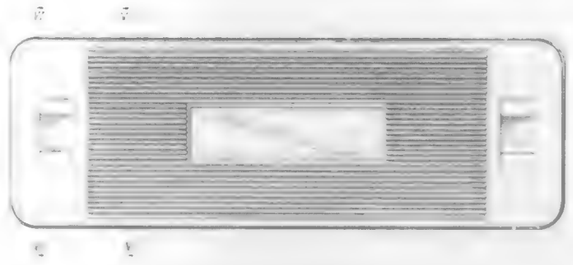
210,606
TABLE
John J. Hamilton and Charles E. Schroer, both % Hamilton Cosco, Inc., 2525 State St., Columbus, Ind. 47201
Filed Jan. 11, 1967, Ser. No. 5,380
Term of patent 14 years
(Cl. D33—14)

210,607
GAME BOARD
John Di Amico, 5627 McMahon St., Philadelphia, Pa. 19141
Filed Sept. 26, 1966, Ser. No. 4,033
Term of patent 14 years
(Cl. D34—5)

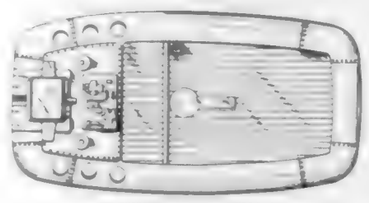


210,608
SCORER CONSOLE OR THE LIKE
George E. Schaefer, Muskegon, Mich., and Richard G. Reineman, Balboa, Calif., assignors to Brunswick Corporation, Chicago, Ill., a corporation of Delaware
Filed Feb. 3, 1967, Ser. No. 5,676
Term of patent 14 years
(Cl. D34—5)

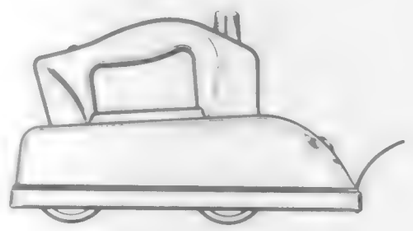
210,609
SWING SEAT OR SIMILAR ARTICLE
Raymond C. Confer, 7543 Slayton Settlement Road, Gasport, N.Y. 10605
Filed Apr. 26, 1967, Ser. No. 6,849
Term of patent 7 years
(Cl. D34—5)



210,610
SLED-TYPE TOY FOR DOLLS
John W. Ryan, Los Angeles, and Jacob de Gelder, Torrance, Calif., assignors to Mattel, Inc., a corporation of California
Filed Feb. 1, 1967, Ser. No. 5,643
Term of patent 14 years
(Cl. D34—15)

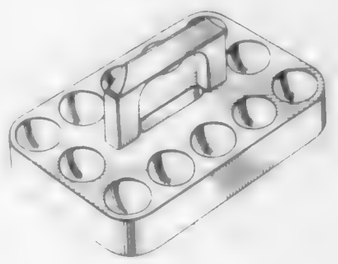


210,611
TOY IRON
Duane E. Spengler, West Falls, N.Y., assignor to Fisher-Price Toys, Inc., East Aurora, N.Y., a corporation of New York
Filed Feb. 28, 1967, Ser. No. 5,984
Term of patent 14 years
(Cl. D34—15)



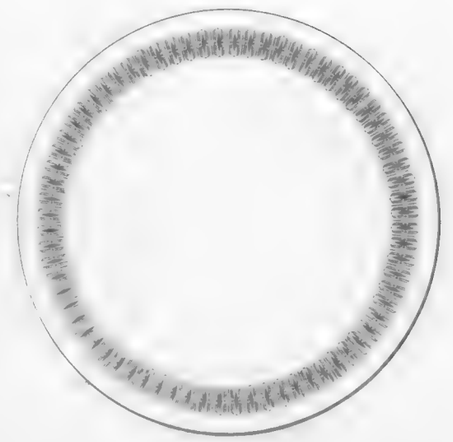
210,612
WINCH
Tomlinson I. Moseley, Atherton, Calif., assignor to Barient Company, San Carlos, Calif., a corporation of California
Filed June 5, 1967, Ser. No. 7,363
Term of patent 14 years
(Cl. D41—1)

210,613
EGG CADDY
Rex G. Moore, Jackson, Miss.
(213 Savanna St., Hinds, Miss. 39212)
Filed Aug. 14, 1967, Ser. No. 8,258
Term of patent 14 years
(Cl. D44—10)



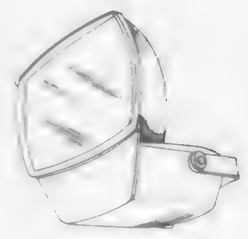
210,614
TRAY
David Douglas, 1119 Lincoln Blvd., Manitowoc, Wis. 54220
Filed Sept. 8, 1967, Ser. No. 8,528
Term of patent 14 years
(Cl. D44—10)

210,615
PLATE OR THE LIKE
Ottorino N. Mercadante, Corning, N.Y., assignor to Corning Glass Works, Corning, N.Y., a corporation of New York
Filed Oct. 2, 1967, Ser. No. 8,805
Term of patent 14 years
(Cl. D44—15)



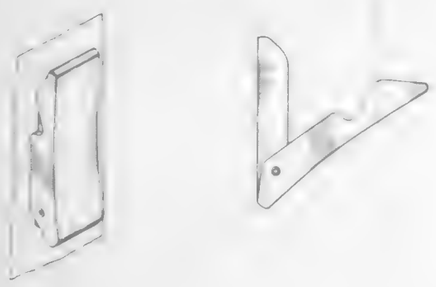
210,616
COMBINED CANDLEHOLDER AND CHRISTMAS TREE ORNAMENT
Dario Moranduzzo, Via Aretina 161, Florence, Italy
Filed Sept. 22, 1966, Ser. No. 3,962
Term of patent 14 years
(Cl. D48—2)

210,617
FLOODLIGHT
George N. Starr, Memphis, Tenn., and Sheldon M. Rutter, Miami, Fla., assignors to American Electric Manufacturing Corporation, Southhaven, Minn.
Filed Oct. 16, 1967, Ser. No. 8,999
Term of patent 14 years
(Cl. D48—20)



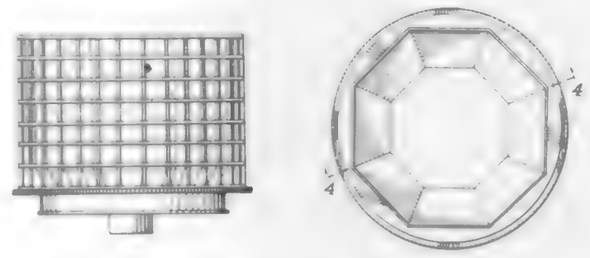
210,618
DESK COUNTERPOISE LAMP
Robert Sonneman, 210 E. 68th St., New York, N.Y. 10021
Filed Oct. 17, 1967, Ser. No. 9,031
Term of patent 14 years
(Cl. D48—20)

210,619
COAT HOOK
Paul R. Maguire, Los Angeles, Calif., assignor to Adams Rite Manufacturing Company, Glendale, Calif., a corporation of California
Filed Mar. 20, 1967, Ser. No. 6,375
Term of patent 14 years
(Cl. D54—1)



210,620
CONDUCTOR RAIL SUPPORT BRACKET
Johan L. Harmsen, 68 Hawkridge Ave., Markham, Ontario, Canada
Filed Nov. 3, 1967, Ser. No. 9,264
Term of patent 14 years
(Cl. D54—1)

210,621
BUCKET FOR USE IN SCRAP COMPRESSING APPARATUS FOR ELECTRIC FURNACE
Kunitoshi Tezuka, 34–7 Minami Sunmachi, Koto-ku, Tokyo-to, Japan
Filed Sept. 21, 1966, Ser. No. 3,950
Term of patent 14 years
(Cl. D55—1)



210,622
PAIR OF SAFETY SPECTACLES
Jack N. Simpson, Greenfields, Reading, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa.
Filed Oct. 6, 1966, Ser. No. 4,172
Term of patent 14 years
(Cl. D57—1)

210,623
PAIR OF SAFETY SPECTACLES
Jack N. Simpson, Greenfields, Reading, Pa., assignor to The Electric Storage Battery Company, Philadelphia, Pa.
Filed Oct. 6, 1966, Ser. No. 4,173
Term of patent 14 years
(Cl. D57—1)

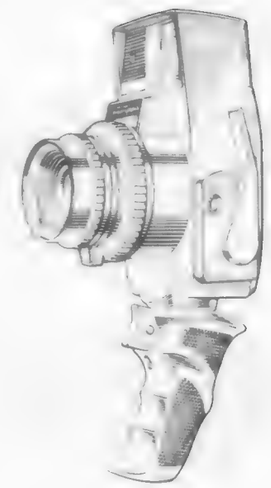
210,624
PAIR OF SPECTACLES
Jack Bloch, Leominster, and Vitalino Marchi, Concord, Mass., assignors to Foster Grant Co., Inc., Leominster, Mass., a corporation of Delaware
Filed Dec. 30, 1966, Ser. No. 5,237
Term of patent 14 years
(Cl. D57—1)

210,625
COMBINATION EYE GLASS TEMPLE AND HEARING AID
Manfred J. Polak, 1115 Michigan Ave., Evanston, Ill. 60202
Filed May 15, 1967, Ser. No. 7,111
Term of patent 14 years
(Cl. D57—1)

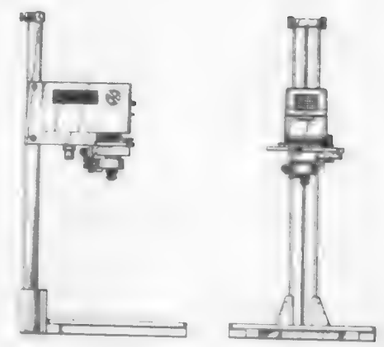
210,626
BOTTLE
Harold J. Vanderhyde, North Merrick, N.Y., assignor to The Procter & Gamble Company, Cincinnati, Ohio, a corporation of Ohio
Filed Mar. 30, 1967, Ser. No. 6,445
Term of patent 14 years
(Cl. D58—6)

210,627
FLASHCUBE ADAPTER FOR CAMERAS HAVING ACCESSORY SHOES OR SIMILAR ARTICLE
Dean M. Peterson and Charles E. Pickering, Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y., a corporation of New Jersey
Filed Oct. 24, 1965, Ser. No. 87,925
Claims priority, application Germany May 19, 1965
Term of patent 14 years
(Cl. D61—1)

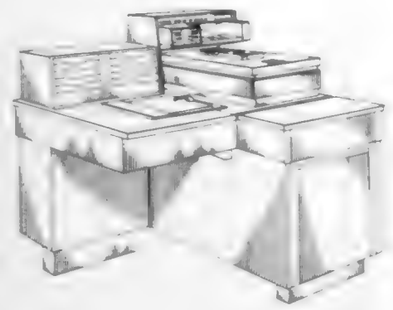
210,628
CAMERA
Nikolaus Karpf, Munich, Germany, assignor to Linhof, Nikolaus Karpf K.G., Munich, Germany
Filed May 3, 1966, Ser. No. 2,151
Claims priority, application Germany Jan. 4, 1966
Term of patent 14 years
(Cl. D61—1)



210,629
PHOTOGRAPHIC ENLARGER
Gilbert Durst, Brixen, near Bolzano, Italy, assignor to DURST S.p.A. Fabbrica Macchine ed Apparecchi Fototecnici, Bolzano, Italy
Filed Sept. 21, 1966, Ser. No. 3,942
Claims priority, application Italy May 12, 1966
Term of patent 14 years
(Cl. D61—1)

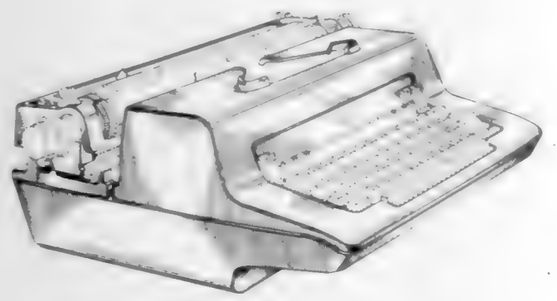


210,630
DOCUMENT REPRODUCING APPARATUS
Jacob W. Patla, Rochester, N.Y., assignor to Xerox Corporation, Rochester, N.Y., a corporation of New York
Filed Oct. 13, 1966, Ser. No. 4,261
Term of patent 14 years
(Cl. D61—1)



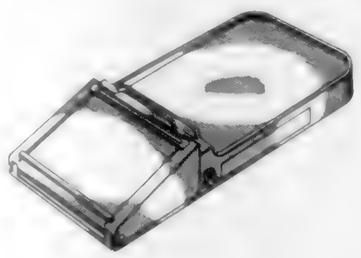
210,631
TYPEWRITER
Carl L. Otto, New York, N.Y., assignor to Litton Business Systems, Inc., a corporation of New York
Filed Jan. 17, 1967, Ser. No. 5,459
Term of patent 14 years
(Cl. D64—11)

210,632
TYPEWRITER
John Svezia, Millburn, N.J., assignor to Olivetti Underwood Corporation, New York, N.Y., a corporation of Delaware
Filed May 25, 1967, Ser. No. 7,260
Term of patent 14 years
(Cl. D64—11)



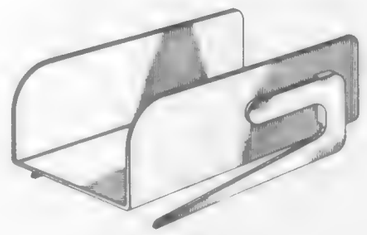
210,633
POCKET CLIP FOR A WRITING INSTRUMENT OR SIMILAR ARTICLE
Robert John Darst, Fort Madison, Iowa, assignor to Textron Inc., Providence, R.I., a corporation of Rhode Island
Filed Apr. 18, 1966, Ser. No. 1,926
Term of patent 14 years
(Cl. D74—2)

210,634
COMBINED MEMO PAPER HOLDER AND TELEPHONE STAND
William Chesterfield Newton, 1 Seacombe Grove, Brighton, near Melbourne, Victoria, Australia
Filed Oct. 18, 1966, Ser. No. 4,320
Claims priority, application Australia May 9, 1966
Term of patent 14 years
(Cl. D74—9)

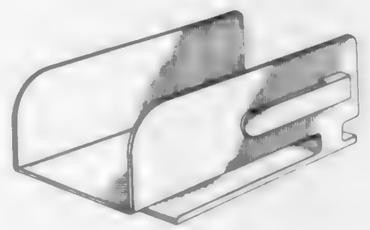


210,635
CARTRIDGE ACTUATOR FOR A WRITING INSTRUMENT
Emil Hechtle, Mountainside, N.J., assignor to Radiant Pen Corp., Kenilworth, N.J.
Filed Dec. 19, 1966, Ser. No. 5,115
Term of patent 14 years
(Cl. D74—17)

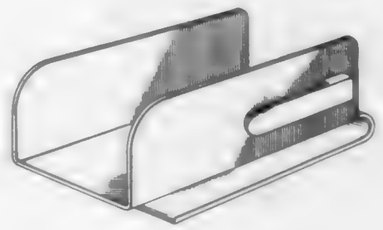
210,636
GROCERY BAG PACKER
Albert B. Greenfield, 1311 Huntingdon Pike, Huntingdon Valley, Pa. 19006
Filed May 4, 1967, Ser. No. 6,943
Term of patent 14 years
(Cl. D80—1)



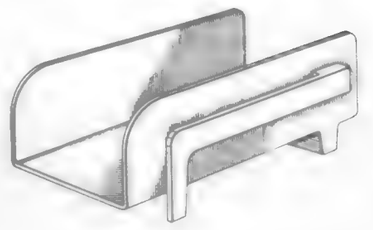
210,637
GROCERY BAG PACKER
Albert B. Greenfield, 1311 Huntingdon Pike, Huntingdon Valley, Pa. 19006
Filed May 4, 1967, Ser. No. 6,944
Term of patent 14 years
(Cl. D80—1)



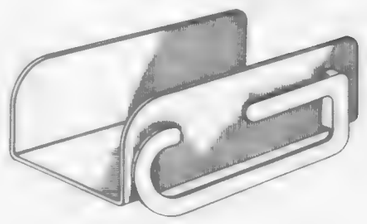
210,638
GROCERY BAG PACKER
Albert B. Greenfield, 1311 Huntingdon Pike, Huntingdon Valley, Pa. 19006
Filed May 4, 1967, Ser. No. 6,945
Term of patent 14 years
(Cl. D80—1)



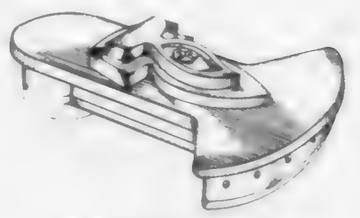
210,639
GROCERY BAG PACKER
Albert B. Greenfield, 1311 Huntingdon Pike, Huntingdon Valley, Pa. 19006
Filed May 4, 1967, Ser. No. 6,946
Term of patent 14 years
(Cl. D80—1)



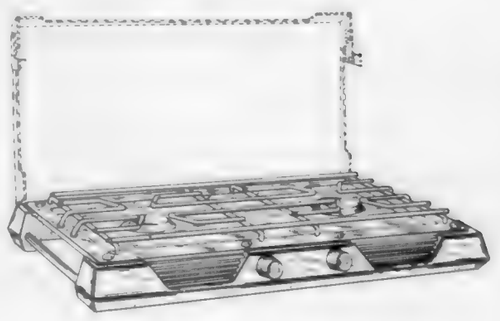
210,640
GROCERY BAG PACKER
Albert B. Greenfield, 1311 Huntingdon Pike, Huntingdon Valley, Pa. 19006
Filed May 4, 1967, Ser. No. 6,947
Term of patent 14 years
(Cl. D80—1)



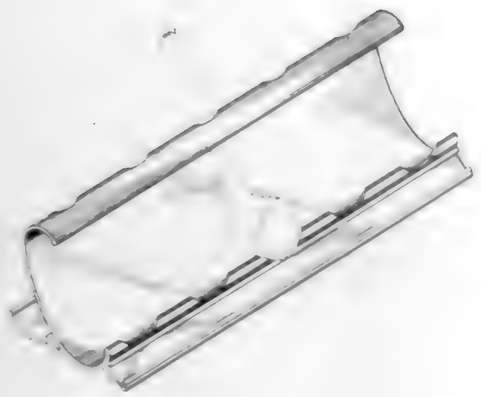
210,641
GAS BURNER
Joseph T. Leighton, 5245 Topeka Drive, Tarzana, Calif. 91356
Filed Jan. 4, 1967, Ser. No. 5,310
Term of patent 14 years
(Cl. D81—10)



210,642
PORTABLE BURNER
Pierre Eppendahl, Lyon, France, assignor to Societe Anonyme Sidemat, Paris, France, a corporation of France
Filed Apr. 17, 1967, Ser. No. 6,728
Claims priority, application France Jan. 18, 1967
Term of patent 14 years
(Cl. D81—10)

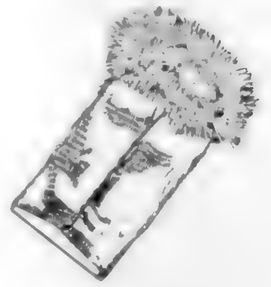


210,643
SMOKER'S PIPE RACK
Jacque Fresco, 3112 SW. 23rd St., Miami, Fla. 33142
Filed Mar. 7, 1967, Ser. No. 6,111
Term of patent 14 years
(Cl. D85—8)



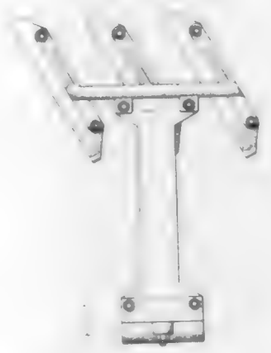
210,644
COMBINED HAIR SPRAY APPLICATOR AND CONTAINER THEREFOR
George B. Douglas, 550 40th St., and Roland C. Eberhardt, 753 W. 8th St., both of San Pedro, Calif. 90731
Filed Feb. 11, 1966, Ser. No. 1,011
Term of patent 7 years
(Cl. D86—10)

210,645
KEY CASE
Kenneth D. Kraus, 322 W. 72nd St., New York, N.Y. 10023
Filed June 21, 1965, Ser. No. 85,806
Term of patent 14 years
(Cl. D87—3)



210,646
CAMERA CASE
Donald E. Everburg, Southbridge, Mass., assignor, by mesne assignments, to American Optical Company, Southbridge, Mass., a corporation of Delaware
Filed June 15, 1966, Ser. No. 2,681
Term of patent 7 years
(Cl. D87—5)

210,647
STRING BEAN SNIPPER
Joe R. Urschel, 202 Michigan Ave., Valparaiso, Ind. 46383
Filed May 26, 1966, Ser. No. 2,441
Term of patent 14 years
(Cl. D95—1)



LIST OF DESIGN PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 26TH DAY OF MARCH, 1968

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

Abplanalp, Robert H., and V. Koenigsberg; said Abplanalp assor. to Precision Valve Corp. and said Koenigsberg assor. to Colgate-Palmolive Co. Dispenser top for a pressure can. 210,574, 3–26–68, Cl. D9—275.

Adams Rite Mfg. Co. : *See*—
Maguire, Paul R. 210,619.

American Electric Mfg. Corp. : *See*—
Starr, George N., and Rutter. 210,617.

American Hospital Supply Corp. : *See*—
Nielsen, Milton R., and Slouka. 210,584.

American Optical Co. : *See*—
Everburg, Donald E. 210,646.

Amerock Corp. : *See*—
Anderson, Lloyd L. 210,605.

Ampex Corp. : *See*—
Grossman, Charles F., and Southcott. 210,587.

Anchor Hocking Glass Corp. : *See*—
Benes, Frank J. 210,572.

Anderson, Lloyd L., to Amerock Corp. Foldable support for a chair arm table. 210,605, 3–26–68, Cl. D33—11.

Barlent Co. : *See*—
Moseley, Tomlinson I. 210,612.

Bassani, S.p.A. : *See*—
Paganelli, Mario. 210,592.

Becker, Brant W., to Gordon Engineering Co. Electronic power supply case or similar article. 210,596, 3–26–68, Cl. D26—15.

Bender, Ray C. Building. 210,577, 3–26–68, Cl. D13—1.

Benes, Frank J., to Anchor Hocking Glass Corp. Bottle or similar article. 210,572, 3–26–68, Cl. D9—100.

Biotronics, Inc. : *See*—
Jenkinson, Frederic W. 210,585.

Blackwell, Margie L. Aquarium cover, or the like. 210,601, 3–26–68, Cl. D30—12.

Bloch, Jack, and V. Marchi, to Foster Grant Co., Inc. Pair of spectacles. 210,624, 3–26–68, Cl. D57—1.

Brunswick Corp. : *See*—
Schaefer, George E., and Reineman. 210,608.

Campbell, John B., to The Proctor & Gamble Co. Jar. 210,570, 3–26–68, Cl. D9—86.

Campi, Antonia, to Società Ceramica Italiana Richard-Ginori Società per Azioni. Bowl for a bidget or similar article. 210,580, 3–26–68, Cl. D23—51.

Campi, Antonia, to Società Ceramica Italiana Richard-Ginori Società per Azioni. Bowl for a toilet or similar article. 210,582, 3–26–68, Cl. D23—67.

Cantrell, Glayds M. Baby toilet trainer. 210,581, 3–26–68, Cl. D23—53.

Catalano, Eduardo F., to Massachusetts Institute of Technology. Chair. 210,578, 3–26–68, Cl. D15—1.

Charmglow Mfg. Co. : *See*—
Koziol, Walter. 210,575.
Koziol, Walter. 210,576.

Colgate-Palmolive Co. : *See*—
Abplanalp, Robert H. 210,574.

Confer, Raymond C. Swing seat or similar article. 210,609, 3–26–68, Cl. D34—5.

Corning Glass Works : *See*—
Mercadante, Ottorino N. 210,615.

Darst, Robert J., to Textron, Inc. Pocket clip for a writing instrument or similar article. 210,633, 3–26–68, Cl. D74—2.

De Gelder, Jacob : *See*—
Ryan, John W., and De Gelder. 210,610.

Di Amico, John. Game board. 210,607, 3–26–68, Cl. D34—5.

Douglas, David. Tray. 210,614, 3–26–68, Cl. D44—10.

Douglas, George B., and R. C. Eberhardt. Combined hair spray applicator and container thereof. 210,644, 3–26–68, Cl. D86—10.

Durst S.p.A. Fabbrica Macchine ed Apparecchi Fototecnici : *See*—
Durst, Gilbert. 210,629.

Durst, Gilbert, to Durst S.p.A. Fabbrica Macchine ed Apparecchi Fototecnici. Photographic enlarger. 210,629, 3–26–68, Cl. D61—1.

Eastman Kodak Co. : *See*—
Peterson, Dean M., and Pickering. 210,627.

Eberhardt, Roland C. : *See*—
Douglas, George B., and Eberhardt. 210,644.

Edmisson, Russell C., to Sierra Electric Corp. Combined electrical face plate and modular inserts therefor. 210,590, 3–26–68, Cl. D26—13.

Electric Storage Battery Co., The : *See*—
Simpson, Jack N. 210,623.

Everburg, Donald E., to American Optical Co. Camera case. 210,646, 3–26–68, Cl. D87—5.

Eppendahl, Pierre, to Societe Anonyme Sidemat. Portable burner. 210,642, 3–26–68, Cl. D81—10.

Fedtro, Inc. : *See*—
Kahn, Robert D. 210,593.
Kahn, Robert D. 210,595.

Fisher-Price Toys, Inc. : *See*—
Spengler, Duane E. 210,611.

Foster Grant Co., Inc. : *See*—
Bloch, Jack, and Marchi. 210,624.

Fresco, Jacque. Smoker's pipe rack. 210,643, 3–26–68, Cl. D85—8.

Gonzalez, Tony. Combination electrical outlet and cord cover. 210,591, 3–26–68, Cl. D26—13.

Gordon Engineering Co. : *See*—
Becker, Brant W. 210,596.

Greenfield, Albert B. Grocery bag packer. 210,636, 3–26–68, Cl. D80—1.

Greenfield, Albert B. Grocery bag packer. 210,637, 3–26–68, Cl. D80—1.

Greenfield, Albert B. Grocery bag packer. 210,638, 3–26–68, Cl. D80—1.

Greenfield, Albert B. Grocery bag packer. 210,639, 3–26–68, Cl. D80—1.

Greenfield, Albert B. Grocery bag packer. 210,640, 3–26–68, Cl. D80—1.

Grossman, Charles F., and M. A. Southcott, to Ampex Corp. Combined display and control console for an information filing and retrieval system. 210,587, 3–26–68, Cl. D26—5.

Hamilton, John J., and C. E. Schroer. Table. 210,606, 3–26–68, Cl. D33—14.

Harmsen, Johan L. Conductor rail support bracket. 210,620, 3–26–68, Cl. D54—1.

Haskon, Inc. : *See*—
Kelly, Norman A. 210,569.

Hechtle, Emil, to Radiant Pen Corp. Cartridge actuator for a writing instrument. 210,635, 3–26–68, Cl. D74—17.

Hehn, John M. Portable seat and backrest combination. 210,579, 3–26–68, Cl. D15—8.

Helmert, Albert E., III. Television set support rack. 210,603, 3–26–68, Cl. D33—3.

Hodge, Gerard T., to Mining & Chemical Products, Ltd. Metal ball anode. 210,586, 3–26–68, Cl. D26—1.

Honeywell, Inc. : *See*—
Mazza, Charles N. 210,588.

Inga, Elio. Bottle. 210,573, 3–26–68, Cl. D9—159.

Jenkinson, Frederic W., to Biotronics, Inc. Carrying case for electronic equipment and the like. 210,585, 3–26–68, Cl. D26—1.

Johnson & Johnson : *See*—
Stanziale, Angelo V. 210,567.

Kadmon, Alice : *See*—
Kadmon, Otto and A. 210,598.
Kadmon, Otto and A. 210,599.

Kadmon, Otto and A. Christmas mobile or the like. 210,598, 3–26–68, Cl. D29—1.

Kadmon, Otto and A. Christmas decoration or the like. 210,599, 3–26–68, Cl. D29—1.

Kahn, Robert D., to Fedtro, Inc. Headlight delay control. 210,593, 3–26–68, Cl. D26—13.

Kahn, Robert D., to Fedtro, Inc. Intercommunications unit. 210,595, 3–26–68, Cl. D26—14.

Kalvitis, Robert E., to Xerox Corp. Electronic adapter for facsimile-computer system. 210,589, 3–26–68, Cl. D26—5.

Karpf, Nikolaus, to Linhof Nikolaus Karpf K.G. Camera. 210,628, 3–26–68, Cl. D61—1.

Kelly, Norman A., to Haskon, Inc. Plastic jug. 210,569, 3–26–68, Cl. D9—53.

Kraus, Kenneth D. Key case. 210,645, 3–26–68, Cl. D87—3.

Koziol, Walter, to Charmglow Mfg. Co. Door knocker. 210,575, 3–26–68, Cl. D10—7.

Koziol, Walter, to Charmglow Mfg. Co. Door knocker. 210,576, 3–26–68, Cl. D10—7.

Leighton, Joseph T. Gas burner. 210,641, 3–26–68, Cl. D81—10.

Linhof Nikolaus Karpf K.G. : *See*—
Karpf, Nikolaus. 210,628.

Litton Business Systems, Inc. : *See*—
Otto, Carl L. 210,631.

Maguire, Paul R., to Adams Rite Mfg. Co. Coat hook. 210,619, 3–26–68, Cl. D54—1.

Marchi, Vilatlino : *See*—
Bloch, Jack, and Marchi. 210,624.

Massachusetts Institute of Technology : *See*—
Catalano, Eduardo F. 210,578.

Mattel, Inc. : *See*—
Ryan, John W., and De Gelder. 210,610.

Mazza, Charles N., to Honeywell, Inc. Computer control cabinet or similar article. 210,588, 3–26–68, Cl. D26—5.

Mercadante, Ottorino N., to Corning Glass Works. Plate or the like. 210,615, 3–26–68, Cl. D44—15.

Mining & Chemical Products, Ltd. : *See*—
Hodge, Gerard T. 210,586.

Modrey, Henry J. Tape threader for temporarily securing magnetic recording tape in a reel. 210,594, 3–26–68, Cl. D26—14.

Moore, Rex G. Egg caddy. 210,613, 3–26–68, Cl. D44—10.

Morandusso, Dario. Christmas tree ornament or the like. 210,597, 3–26–68, Cl. D29—1.

Moranduzzo, Dario, Combined candleholder and Christmas tree ornament. 210,616, 3–26–68, Cl. D48—2.
Moseley, Tomlinson I., to Barlent Co. Winch. 210,612, 3–26–68, Cl. D41—1.
Neslund, Nels E.: *See*—
Westlund, Gaylon T., and Neslund. 210,583.
Newton, William C, Combined memo paper holder and telephone stand. 210,634, 3–26–68, Cl. D74—9.
Nielsen, Milton R., and R. A. Slouka, to American Hospital Supply Corp. Dental console. 210,584, 3–26–68, Cl. D24—1.
Olivette Underwood Corp.: *See*—
Svezia, John. 210,632.
Ott, Furman E. Bunk feeder. 210,602, 3–26–68, Cl. D30—13.
Otto, Carl L., to Litton Business Systems, Inc. Typewriter. 210,631, 3–26–68, Cl. D64—11.
Paganelli, Mario, to Bassani, S.p.A. Cover plate for electrical receptacles. 210,592, 3–26–68, Cl. D26—13.
Patla, Jacob W., to Xerox Corp. Document reproducing apparatus. 210,630, 3–26–68, Cl. D61—1.
Peterson, Dean M., and C. E. Pickering, to Eastman Kodak Co. Flashcube adapter for cameras having accessory shoes or similar article. 210,627, 3–26–68, Cl. D61—1.
Pollak, Manfred J. Combination eye glass temple and hearing aid. 210,625, 3–26–68, Cl. D57—1.
Precision Valve Corp.: *See*—
Abplanalp, Robert H. 210,574.
Procter and Gamble Co., The: *See*—
Campbell, John B. 210,570.
Vanderhyde, Harold J. 210,568.
Vanderhyde, Harold J. 210,571.
Vanderhyde, Harold J. 210,626.
Pickering, Charles E.: *See*—
Peterson, Dean M., and Pickering. 210,627.
Radiant Pen Corp.: *See*—
Hechtle, Emil. 210,635.
Ryan, John W., and J. De Gelder, to Mattel, Inc. Sled-type toy for dolls. 210,610, 3–26–68, Cl. D34—15.
Reineman, Richard G.: *See*—
Schaefer, George E., and Reineman. 210,608.
Rutter, Sheldon M.: *See*—
Starr, George N., and Rutter. 210,617.
Sanders, Herbert R. Holder for firewood carrier. 210,604, 3–26–68, Cl. D33—3.
Schaefer, George E., and R. G. Reineman, to Brunswick Corp. Scorer console or the like. 210,608, 3–26–68, Cl. D34—5.
Schroer, Charles E.: *See*—
Hamilton, John J., and Schroer. 210,606.
Sierra Electric Corp.: *See*—
Edmisson, Russell C. 210,590.
Simpson, Jack N., to The Electric Storage Battery Co. Pair of safety spectacles. 210,622, 3–26–68, Cl. D57—1.
Simpson, Jack N., to The Electric Storage Battery Co. Pair of safety spectacles. 210,623, 3–26–68, Cl. D57—1.
Slouka, Richard A.: *See*—
Nielsen, Milton R., and Slouka. 210,584.
Societa Ceramica Italina Richard-Ginori Societe per Azioni: *See*—
Campi, Antonia. 210,580.
Campi, Antonia. 210,582.
Societe Anonyme Sidemat: *See*—
Eppendahl, Pierre. 210,642.
Sonneman, Robert. Desk counterpoise lamp. 210,618, 3–26–68, Cl. D48—20.
Southcott, Marvin A.: *See*—
Grossman, Charles F., and Southcott. 210,587.
Spengler, Duane E., to Fisher-Price Toys, Inc. Toy iron. 210,611, 3–26–68, Cl. D34—15.
Stanziale, Angelo V., to Johnson & Johnson. Holder for a container for a bactericidal composition. 210,567, 3–26–68, Cl. D4—3.
Starr, George N., and S. M. Rutter, to American Electric Mfg. Corp. Floodlight. 210,617, 3–26–68, Cl. D48—20.
Svezia, John, to Olivette Underwood Corp. Typewriter. 210,632, 3–26–68, Cl. D64—11.
Textron, Inc.: *See*—
Darst, Robert J. 210,633.
Tezuka, Kunitoshi. Bucket for use in scrap compressing apparatus for electric furnace. 210,621, 3–26–68, Cl. D55—1.
Urschel, Joe R. String bean snipper. 210,647, 3–26–68, Cl. D95—1.
Vanderhyde, Harold J., to The Procter & Gamble Co. Bottle or similar article. 210,571, 3–26–68, Cl. D9—87.
Vanderhyde, Harold J., to The Procter & Gamble Co. Jug. 210,568, 3–26–68, Cl. D9—42.
Vanderhyde, Harold J., to The Procter & Gamble Co. Bottle. 210,626, 3–26–68, Cl. D58—6.
Werner, Charles H. Vase. 210,600, 3–26–68, Cl. D29—28.
Westlund, Gaylon T., and N. E. Neslund. Dental impression tray. 210,583, 3–26–68, Cl. D24—1.
Xerox Corp.: *See*—
Kalvitis, Robert E. 210,589.
Patla, Jacob W. 210,630.

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 26TH DAY OF MARCH, 1968

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

AMP Inc.: *See*—
Coldren, Daniel R., and Lau. 3,374,979.
Engelbart, Douglas C. 3,375,505.
A.V.E. Corp.: *See*—
Van Praag, Clifford F. 3,374,721.
Abbey, Robert, and D. S. Lane, to Honeywell Inc. Orientation sensing means comprising photo-detectors and projected fans of light. 3,375,375, 3–26–68, Cl. 250—216.
Abbott, Horace P., to Lever Bros. Co. Case measuring device. 3,374,547, 3–26–68, Cl. 33—143.
Abcor, Inc.: *See*—
Baddour, Raymond F. 3,374,606.
Fisher, Robert E., Ryan, and Modell. 3,374,607.
Abe, Hideo: *See*—
Muramori, Kiyoshi, Yaguchi, Watanabe, and Abe. 3,375,196.
Abraham, Anton, to Wiener, Kammfabrik Anton Abraham Komm. Ges. Tear-off device for rotatably mounted paper rolls particularly toilet paper rolls 3,374,931, 3–26–68, Cl. 225—79.
Abrams, Robert B.: *See*—
Campbell, Claude E., and Abrams. 3,374,709.
Achter, Meyer R., H. H. Smith, R. J. Riley, and R. L. Stegman, to United States of America, Navy. Flexural fatigue machine. 3,374,662, 3–26–68, Cl. 73—67.4.
Adam, W. D., Co., Inc.: *See*—
Adam, William D. 3,374,914.
Adam, William D., to W. D. Adam Co., Inc. Shipping container and structural material therefor. 3,374,914, 3–26–68, Cl. 220—4.
Adams, Norbert, T. Mukerjee, and J. M. Smith, to General Electric Co. Semiconductor tunnel diode device. 3,375,416, 3–26–68, Cl. 317—234.
Adams, Richard G., to J. P. Stevens & Co., Inc. Treatment of fibrous glass. 3,375,155, 3–26–68, Cl. 161—93.
Adams, William E., and W. A. Lucht, to United States Steel Corp. Torque balanced rope. 3,374,619, 3–26–68, Cl. 57—148.
Adler, William, to Servo Corp. of America. Suppressed carrier demodulation circuit. 3,375,453, 3–26–68, Cl. 329—145.
Aguilar, Edward C.: *See*—
Johnson, William D., Grippi, and Aguilar. 3,374,707.
Aiken Industries, Inc.: *See*—
Julius, Richard F. 3,375,141.
Air Products and Chemicals, Inc.: *See*—
Vander Arend, Peter C. 3,375,076.
Air Reduction Co., Inc.: *See*—
Vitcha, James F., and Moore. 3,375,279.
Aircraft Radio Corp.: *See*—
Clayton, John C. 3,375,486.
Aircraft Specialties, Inc.: *See*—
Kyser, Smith. 3,374,526.
Aitchison, Colin S., to North American Philips Co., Inc. Parametric amplifiers with quarter-wave spacing. 3,375,454, 3–26–68, Cl. 330—4.9.
Ajem Laboratories, Inc.: *See*—
Millhiser, Robert G., and Winger. 3,374,581.
Akashi, Tsuneo, M. Takahashi, F. Yamauchi, N. Tsubouchi, and T. Ohno, to Nippon Electric Co. Ltd. Piezoelectric lead zirconate titanate containing rhodium. 3,375,194, 3–26–68, Cl. 252—62.9.
Akron Standard Mold Co., The: *See*—
Ruttenberg, William C., and Teater. 3,375,154.
Aktiebolaget Tudor: *See*—
Kide, Leif A. 3,374,609.
Aktiengesellschaft Brown, Boveri & Cie.: *See*—
Seippel Claude. 3,374,942.
Alden, Milton, to Alden Research Foundation. Electrical harness. 3,375,406, 3–26–68, Cl. 317—99.
Alden Research Foundation: *See*—
Alden, Milton. 3,375,406.
Aldridge, Gerald R., to E. I. du Pont de Nemours and Co. Phenazine derivatives. 3,375,251, 3–26–68, Cl. 260—267.
Alexander, Matthew A.: *See*—
Scuitto, Thomas J., and Alexander. 3,375,356.
Scuitto, Thomas J., and Alexander. 3,375,498.
Alexeff, Alexander V., to Industrial Ovens, Inc. Tire manufacturing methods. 3,375,150, 3–26–68, Cl. 156—117.
Alfrey, Turner, Jr., and D. S. Chisholm, to The Dow Chemical Co. Modular curved structure and method of assembly. 3,374,588, 3–26–68, Cl. 52—81.
Alich, John A., to The P. B. Yates Machine Co. Ltd. Bandsaw guide. 3,374,816, 3–26–68, Cl. 143—160.
Allen, Stanley G.: *See*—
Setchfield, John B., and Allen. 3,375,145.
Allgemeine Elektricitats-Gesellschaft: *See*—
Schimmeister, Erwin. 3,375,410.
Allied Chemical Corp.: *See*—
Yodis, Anthony W., and Cunningham. 3,375,072.
Allied Flexible Products Inc.: *See*—
Leader, Harold. 3,374,612.
Allis-Chalmers Mfg. Co.: *See*—
Barber, Richard H., and McKean. 3,375,382.
Allison, Robert D., to United States Envelope Co. Envelopes with integral, detachable coupons contained therein. 3,374,940, 3–26–68, Cl. 229—70.
Allmanna Svenska Elektriska Aktiebolaget: *See*—
Hannerz, Kare. 3,375,171.
Mansson, Ragnar, and Skar. 3,375,172.
Alloy Surfaces Co.: *See*—
Baldi, Alfonso L., and Nice. 3,375,128.
Alsco, Inc.: *See*—
Youssi, Dale J., and Brand. 3,374,822.
Aluminum Processing Corp.: *See*—
Dorsky, Stanley. 3,375,368.
Alvarez Diaz, Francisco R. Artificial heart valve. 3,374,489, 3–26–68, Cl. 3—1.
Amaliksen, Arne S., to The Dow Chemical Co. Compressed sponge package. 3,374,882, 3–26–68, Cl. 206—46.
American Cyanamid Co.: *See*—
Bach, Frederick Louis, Barclay, and Cohen. 3,375,256.
American Gas Association Inc.: *See*—
Papp, Alexander M., and Hine. 3,375,081.
American Machine & Foundry Co.: *See*—
Chen, William K.-W. 3,375,182.
Kohler, Fred, and Rudd. 3,375,344.
Rademacher, Robert E., and Marasso. 3,374,600.
Rubinowitz, Leo. 3,375,049.
Yudewitz, Norman. 3,375,349.
American Physical Fitness Research Institute, Inc.: *See*—
Ruderian, Max J. 3,374,492.
American Potash & Chemical Corp.: *See*—
Healy, Robert M., and Royer. 3,375,061.
American Smelting and Refining Co.: *See*—
Kranz, Paul J. 3,375,107.
American Standard Inc.: *See*—
Heskestad, Gunnar. 3,374,971.
McKissick, Dale C., and Bauer. 3,375,106.
Okress, Ernest C. 3,374,941.
Amerock Corp.: *See*—
Anderson, Donald L. 3,375,051.
Dargene, Carl J. 3,375,031.
Ampex Corp.: *See*—
Dunsheath, Thomas J. 3,374,962.
Anaconda Aluminum Co.: *See*—
Smith, Addison R. 3,375,186.
Anadarko Production Co.: *See*—
Hester, Lewis W. 3,374,955.
Andersen, Clifford W., to The Wurlitzer Co. Tandem station machine for making piano action parts. 3,374,817, 3–26–68, Cl. 144—3.
Anderson, Donald L., to Amerock Corp. Drawer guiding and supporting assembly. 3,375,051, 3–26–68, Cl. 312—343.
Anderson, Leroy L., Jr., and F. Drugan, to Millers Falls Co. Woodcutting saw blade. 3,374,815, 3–26–68, Cl. 143—133.
Anderson, Ruth P.: *See*—
Goldman, Marvin, and Anderson. 3,375,369.
Anderson, Thomas P.: *See*—
Davis, William R., and Anderson. 3,374,703.
Anderson, Warren D., to Hoffmann Bearings Co. Machine and method of forming sheet metal articles. 3,374,519, 3–26–68, Cl. 29—148.4.
Anderson, William H.: *See*—
Hanson, Roy R. 3,374,549.
Anspon, Harry D.: *See*—
Smith, Wayne E., and Anspon. 3,375,216.
Smith, Wayne E., and Anspon. 3,375,217.
Anstalt fur Patentdienst: *See*—
Fleissner, Heinz. 3,374,552.
Fleissner, Heinz. 3,374,646.
Anthony, Wilson B. Process of recovering feed products from animal wastes. 3,375,116, 3–26–68, Cl. 99—2.
Antraigue, Roger. Machine for treating pneumatic tires. 3,375,153, 3–26–68, Cl. 156—410.
Antunovic, Anthony J. Deceleration indicator for motor vehicles. 3,375,496, 3–26–68, Cl. 340—72.
Aonoff, Edward S.: *See*—
Brent, George T., and Aonoff. 3,374,784.
Aquionics Corp.: *See*—
Buchmann, Louis J. 3,374,891.
Argabright, Perry A., to Marathon Oil Co. Catalytic hydrogenation of polycyclic aromatic quinones. 3,375,285, 3–26–68, Cl. 260—618.
Arlside Ltd. Maidenhead: *See*—
Lawes, Louis F. W., Shreeve, and Mihalik. 3,374,768.
Armco Steel Corp.: *See*—
Marshall, William E. 3,375,098.
Marshall, William E. 3,375,099.
Stutenroth, Charles E., and Werts. 3,374,997.
Taylor, David W. 3,375,144.
Armour Agricultural Co.: *See*—
Haseman, Joseph F. 3,375,067.
Armstrong Corp Co.: *See*—
Franze, John P. 3,375,311.
Thorne, Ward. 3,374,731.
Armstrong, Robert C., to General Dynamics Corp. Negative pressure device. 3,374,792, 3–26–68, Cl. 128—376.

Arneklev, Duane R.: *See*—
Brokke, Mervin E., Lukas, and Arneklev. 3,375,277.

Arps Corp.: *See*—
Redwine, Fletcher H. 3,374,669.

Arth, Glen E., D. Johnston, and L. H. Sarett, to Merck & Co., Inc. Ring a unsaturated-20-oxo-11,17-bis-oxygenated 16-methyl-steroids of the pregnane series. 3,375,261, 3-26-68, Cl. 260—397.45.

Artnell Co.: *See*—
Gielow, George F., and Edwards. 3,375,039.

Arundale, Erving: *See*—
Van de Castle, John F., Baldwin, and Arundale. 3,375,236.

Asada, Atsushi, and Y. Uchida, to Hayakawa Kenki Kogyo Kabushiki Kaisha. Register for a calculator that utilizes "excess 3" code. 3,375,355, 3-26-68, Cl. 235—156.

Asahi Breweries Ltd.: *See*—
Takayanagi, Sho. 3,374,726.

Asahi Kasei Kogyo Kabushiki Kaisha: *See*—
Ouchi, Shunji, Sowa, Yamada, Tsunoda, Kurihara, and Senoo 3,375,244.

Ashburn, Richard A.: *See*—
Donohue, John C., and Ashburn. 3,375,485.

Assaf, Said A. Method of preserving fresh meat. 3,375,119, 3-26-68, Cl. 99—157.

Astrodata, Inc.: *See*—
Madsen, R. G. 3,375,463.

Atkinson, Wallace E. Game with cruciform gameboard which converts to gamepiece container. 3,375,008, 3-26-68, Cl. 273—101.

Atlas Tool & Mfg. Co.: *See*—
Delf, Glenn A. 3,375,338.

Atomic Energy of Canada Ltd.: *See*—
Hilborn, John W. 3,375,370.
Stubley, Philip H. 3,375,170.
Wilson, Ivan L. 3,375,162.

Atomic Power Development Associates, Inc.: *See*—
McHugh, William E., and Shoudy. 3,375,169.

Auer, Martin F., to United States of America, Army. Method and means for orienting crystals by alternate application of angularly spaced magnetic fields. 3,375,438, 3-26-68, Cl. 324—14.

Autosonics, Inc.: *See*—
Rand, Burton. 3,375,177.

Axell Larsson Maskinaffar AB: *See*—
Stegerud, Olof G. 3,374,804.

Aye, Wolfgang G. U., M. J. Balkow, H. K. H. Hasse, and G. J. Rauter, to International Standard Electric Corp. Control circuit for induction motors. 3,375,424, 3-26-68, Cl. 318—227.

Ayres, Douglas B., and D. R. Sutton, to Minneapolis-Honeywell Regulator Co. Peak detector with automatic noise level adjusting means. 3,375,450, 3-26-68, Cl. 328—150.

Azoplate Corp.: *See*—
Schell, Loni, Uhlig, and Braun 3,374,734.

BTU Engineering, Inc.: *See*—
Beck, Jacob H. 3,375,319.

Bach, Frederick L., J. C. Barclay, and E. Cohen, to American Cyanamid Co. 4-substituted-4'-tertiary aminoalkoxy biphenyls. 3,375,256, 3-26-68, Cl. 260—294.7.

Bachman, Bernhard R., to Haag-Streit A.G. Coordinatograph. 3,374,453. 3-26-68, Cl. 33—18.

Baddour, Raymond F., to Ahcor, Inc. Method of and apparatus for chromatographic separations. 3,374,606, 3-26-68, Cl. 55—67.

Bader, Frank: *See*—
Richards, Dennis, Bader, and Magoos. 3,374,679.

Bailey, Donald L., and R. M. Pike, to Union Carbide Corp. Nitroarylsilanes and siloxanes. 3,375,218, 3-26-68, Cl. 260—37.

Bailey, Roy A. Mop for cleaning or waxing. 3,374,498. 3-26-68, Cl. 15—119.

Baizer, Manuel M., to Monsanto Co. Acrylonitrile polymers. 3,375,237, 3-26-68, Cl. 260—88.7.

Baker, Don H., Jr.: *See*—
Heinen, Harold J., Baker, and Gomes. 3,375,180.

Balaban, Philip. Card holder. 3,374,564, 3-26-68, Cl. 40—11.

Baldi, Alfonso L., and W. E. Nice, to Alloy Surfaces Co. Chromizing and priming employing chromium and anhydrous magnesium chloride. 3,375,128, 3-26-68, Cl. 117—107.2.

Baldwin, Alan W. Pressure indicator. 3,374,762, 3-26-68, Cl. 116—65.

Baldwin, Francis P.: *See*—
Van de Castle, John F., Baldwin, and Amundale. 3,375,286.

Baldwin, John L. E., and D. J. Parkyn, to Rank-Bush Murphy Ltd. Video D.C. insertion circuit. 3,375,326, 3-26-68, Cl. 178—7.1.

Baldyga, Joseph W., to Diamond Die & Mold Co. Method and apparatus for crimping electrical connectors. 3,374,657, 3-26-68, Cl. 72—413.

Balkow, Max J.: *See*—
Aye, Wolfgang G. U., Balkow, Hasse, and Rauter. 3,375,424.

Banks, William P., and M. Hutchison, to Continental Oil Co. Apparatus for minimizing corrosion of metals. 3,375,183. 3-26-68, Cl. 204—196.

Barber-Colman Co.: *See*—
Haug, Edward W. 3,347,851.

Barber, Richard H., and J. T. McKean, to Allis-Chalmers Mfg. Co. Dynamoelectric machine. 3,375,382, 3-26-68, Cl. 310—90.

Barclay, John C.: *See*—
Bach, Frederick L., Barclay, and Cohen. 3,375,256.

Bard, C. R., Inc.: *See*—
Logan, Earl A., Maloney, and Carson. 3,374,509.

Barden, Wayne A.: *See*—
Van Benthuysen, John, and Barden. 3,375,478.

Barker, Arthur K., to Cable Cover Ltd. Cable grip. 3,374,511, 3-26-68, Cl. 24—126.

Barrett, James P., E. T. Slattery, and J. H. Norris, to Veeder Industries Inc. Pushbutton rotary switch having unitary actuator. 3,375,337, 3-26-68, Cl. 200—156.

Barrows, Martin R. Radiation sensitive multichannel pressure transducer. 3,375,377, 3-26-68, Cl. 250—231.

Barth, Bruce P., T. E. Bugel, and W. F. Hale, to Union Carbide Corp. Mixtures of polyhydroxyethers and polyarylene polyethers. 3,375,297, 3-26-68, Cl. 260—823.

Basile, Norman K., and D. R. Yearwood, to J. J. McMullen. System for cooling, purging and warming liquefied gas storage tanks and for controlling the boil-off rate of cargo therein. 3,374,638, 3-26-68, Cl. 62—45.

Basile, Norman K.: *See*—
Burke, Charles A., Gale, and Basile. 3,374,639.
Corvino, Ralph A., and Basile. 3,374,641.

Baskwell, John A., to Pirelli General Cable Works Ltd. Means of impregnate a hollow cable core. 3,374,767, 3-26-68, Cl. 118—408.

Bass, Ottis W., to United States of America, Army. Spotting charge. 3,374,741, 3-26-68, Cl. 102—87.

Bates, Robert C.: *See*—
Corp, Ernest L., and Bates. 3,374,677.

Bator, Jesse A. Towel bar with folding rack. 3,374,899, 3-26-68, Cl. 211—96.

Batton, Francis E., to Pittsburgh Plate Glass Co. Paradichlorobenzene block. 3,375,159, 3-26-68, Cl. 167—30.

Bauer, Hans, and J. Heckmaier, to Wacker-Chemie G.m.b.H. Process for suspension polymerization of vinyl chloride. 3,375,238, 3-26-68, Cl. 260—92.8.

Bauer, James H.: *See*—
McKissick, Dale C., and Bauer. 3,375,106.

Baugher, John D., to The Rowan Controller Co. Constant current regulator and voltage sensing circuit. 3,375,435, 3-26-68, Cl. 323—4.

Baumbach, Harlan L. Automatic electrical control apparatus and film printer cuing system embodying same. 3,374,723, 3-26-68, Cl. 95—75.

Bausch & Lomb Inc.: *See*—
Pitchford, Richard L. 3,374,544.

Baxter Woolen Co., Inc.: *See*—
MacKay, Alden J. 3,374,506.

Bazilli, Michael V., S. G. Siddall, W. G. Moore, and J. C. Whitesides, to Lilliston Implement Co. Fertilizer spreader. 3,374,956, 3-26-68, Cl. 239—683.

Beach, Robert W.: *See*—
Cox, James P. 3,375,118.

Bean, Claude T., Jr.: *See*—
Dorfman, Edwin, Carr, and Bean. 3,375,267.

Bearman, Stephen L.: *See*—
Kesslin, George, Bearman, and Lewis. 3,375,268.

Beaulieu, Bernard A.: *See*—
Rodgers, Paul D., and Beaulieu. 3,375,517.

Beavers, William O., to El Paso Natural Gas Products Co. Olefin polymerization with a potassium-amine-activated carbon catalyst. 3,375,294, 3-26-68, Cl. 260—683.15.

Beck, Jacob H., to BTU Engineering, Inc. High temperature electrical heating unit. 3,375,319, 3-26-68, Cl. 13—25.

Beck, Paul W.: *See*—
Brockman, Frank G., Beck, and Steneck. 3,375,195.

Beffa, Fabio, P. Lienhard, and E. Steiner, to J. R. Geigy, A.G. Metal-containing dyestuffs. 3,375,240, 3-26-68, Cl. 260—145.

Beier, Friedrich. Ski binding. 3,375,017, 3-26-68, Cl. 280—11.35.

Bell, Lawrence K., to Honeywell Inc. Servo reversible control apparatus for DC motor. 3,375,425, 3-26-68, Cl. 318—302.

Bell Telephone Laboratories, Inc.: *See*—
Buhrendorf, Frederick G., and Loosme. 3,375,408.
Ghiron, Hugo. Harr, and Martellotto. 3,375,499.
Lucky, Robert W. 3,375,473.
Royer, James J. 3,375,379.

Belleau, Jean D., to Dominion Engineering Works, Ltd. Process and apparatus for drying paper. 3,374,550, 3-26-68, Cl. 34—9.

Bendix Corp., The: *See*—
Bridges, Robert M., and Nerenstein. 3,375,488.
Molnar, Robert J., and Parfomak. 3,375,508.

Bentjens, Bernd, to Fa. Wilhelm Fette Praxisionswerkzeug-Fabrik. Hob. 3,374,518, 3-26-68, Cl. 29—103.

Bennett, Donald A., to The International Synthetic Rubber Co. Ltd. Process for preparing modified alkyo resins having increased resilience and resistance to cracking. 3,375,214, 3-26-68, Cl. 260—22.

Berghgracht, Marius. Installations for the manufacture of large-capacity bags. 3,374,714, 3-26-68, Cl. 93—8.

Bergmann, Allan D.: *See*—
Lefelhocz, Joseph R., Peller, and Bergmann. 3,374,603.

Berliev Photo, Inc.: *See*—
Flieder, Robert A. 3,375,403.

Bernard, Jacques H., to Societe Pour l'Equipement, de la Blanchisserie et de la Teinturerie Francaises. Heating still. 3,374,833. 3-26-68, Cl. 165—140.

Bernier, Gerald L.: *See*—
Hayner, Paul F., and Bernier. 3,375,386.

Beronius, Harry V.: *See*—
Osborn, Harry B., Jr., and Beronius. 3,374,520.

Bertelsen, Bruce I., to International Business Machines Corp. Magnetostatically coupled magnetic thin film devices. 3,375,503. 3,26-68, Cl. 340—174.

Betts and Co. Ltd.: *See*—
Satchwell, John S., and Mrashaw. 3,374,605.

Beyer, Ralph E.: *See*—
May, Patrick L., Vidrine, and Beyer. 3,374,729.

Biggar, Allan M., to United States of America, Army. Laminated thin film flexible alkaline battery. 3,375,136, 3-26-68, Cl. 136—6.

Bigger, Frederick: *See*—
Kelly, Thomas E., and Bigger. 3,374,855.

Bildusas Vytautas E., to Swift & Co. Adhesive. 3,375,121, 3-26-68, Cl. 106—146.

Bishoff, Gustav H. Magnetically actuated toy having movable features. 3,374,573, 3-26-68, Cl. 46—237.

Bjorklund, Gustaf B., to Rederi AB Soya. Hydraulic radial piston machines. 3,374,712, 3-26-68, Cl. 91—176.

Black, James T., Jr., to H. K. Porter Co., Inc. Process for continuously casting elongated metal bodies. 3,374,826, 3-26-68 Cl. 164—82.

Black, Sheppard A., and J. D. Heide, to United States Rubber Co. Bead-setting method used in tire carcass building process. 3,375,151, 3-26-68, Cl. 156—132.

Black, Sivalls & Bryson, Inc.: *See*—
McMinn, Robert E. 3,374,642.

Blacksher, William H. Pipe pulling tool. 3,375,034, 3-26-68, Cl. 294—86.24.

Blackwood, John, and G. T. Genneken, to The Singer Co. Bobbin thread replenishing control mechanism for sewing machines. 3,374,756, 3-26-68, Cl. 112—184.

Blase, George A.: *See*—
Hanson, Roy R. 3,374,549.

Bowcutt, Alvin A., Boliker, and Polikaitis. 3,374,528.

Boniger, Richard M., to A. G. Spalding & Bros. Inc. Means for molding a grip or the like. 3,374,503, 3-26-68, Cl. 18—36.

Bonner, Willard H., Jr., to E. I. du Pont de Nemours and Co. Microcellular polymeric structure. 3,375,212, 3-26-68, Cl. 260—2.5.

Bonnin, Andre: *See*—
Laveissiere, Francoise, Bonnin, and Poirier. 3,375,202.

Bokey, John B., and B. B. Pearce, to Imperial Chemical Industries, Ltd. Ammonium polyphosphate preparation. 3,375,063, 3-26-68, Cl. 23—107.

Borden, Douglas G., C. C. Unruh, and S. H. Merrill, to Eastman Kodak Co. Light-sensitive polymers having a linear chain containing the styryl ketone group. 3,375,229, 3-26-68, Cl. 260—50.

Borelli, Michael T., H. J. Daniels, and H. H. Hosenthien, to United States of America, National Aeronautics and Space Administration. Adaptive tracking notch filter system. 3,375,451, 3-26-68, Cl. 328—167.

Borman, Willem F. H.: *See*—
Keane, John J., Fox, and Borman. 3,375,225.

Bosch, Robert, G.m.b.H.: *See*—
Brill, Klaus. 3,375,413.

Boteler, Henry W., to Grinnell Corp. Method of making diaphragm valve bodies. 3,374,522, 3-26-68, Cl. 29—157.1.

Bott, Adolf H., to Radio Corp. of America. Modulation technique exhibiting improved stabilization at high carrier frequencies. 3,375,470, 3-26-68, Cl. 332—45.

Boucher, Roland A., to Hughes Aircraft Co. High efficiency parallel rail accelerator. 3,374,629, 3-26-68, Cl. 60—202.

Boudigues, Alexandre, to CSF-Compagnie Generale de Telegraphis Sans Fil. Hall effect D.C. motor. 3,375,422, 3-26-68, Cl. 318—138.

Bound Brook Bearing Corp. of America: *See*—
Scott, James J. 3,375,133.

Bowcutt, Alvin A., D. J. Boliker, and B. Polikaitis, to Union Tank Car Co. Hopper car fabrication. 3,374,528, 3-26-68, Cl. 29—471.1.

Bowden, Benjamin G., to M. N. Bowden (Noreen). Bicycle frame. 3,375,024 3-26-68 Cl. 280—281.

Bowden, Mary N.: *See*—
Bowden, Benjamin G. 3,375,024.

Bowers, Albert, P. Crabbe, and J. Edwards, to Syntex Corp. 19-nor-9β,10α-steroids of the pregnane series. 3,375,260, 3-26-68, Cl. 260—397.3.

Brade, James N., to Harrison, McGregor and Guest Ltd. Mowing machines. 3,374,610, 3-26-68, Cl. 56—25.

Bradley, Milton, Co.: *See*—
Smith, Luke J., Jr. 3,374,558.
Smith, Luke J., Jr. 3,374,559.

Bramson, Maurice. Pressure vessel. 3,374,781, 3-26-68, Cl. 126—369.

Brandt, Carl T., to Continental Oil Co. Underground storage and method of forming the same. 3,374,633, 3-26-68, Cl. 61—.5.

Brashaw, Norman H.: *See*—
Satchwell, John S., and Brashaw. 3,374,605.

Braun, Jurgen: *See*—
Schell, Loni, Uhlig, and Braun. 3,374,734.

Breckoff, Walter E., and J. M. McEuen, to Ethyl Corp. Restoring catalyst activity in an isomerization process. 3,375,293, 3-26-68, Cl. 260—683.2.

Brennan, Harry M.: *See*—
McHenry, Keith W., Jr., Brennan, and D'Ouville. 3,375,190.

Brenot, Claude, to CSF-Compagnie Generale de Telegraphie Sans Fil. Thermal gas flow comparator. 3,374,676, 3-26-68, Cl. 73—399.

Brent, George T., and E. S. Aonoff. Mechanical massage apparatus with crank and slide. 3,374,784, 3-26-68, Cl. 128—61.

Breon, Pearl L., R. H. Kress, and J. C. Medley, to Caterpillar Tractor Co. Vehicle suspension strut. 3,375,002, 3-26-68, Cl. 267—65.

Bretford Mfg., Inc.: *See*—
Petrick, Russell E. 3,374,551.

Brett, Norman H: *See*—
Russell, Lewis E., Harrison, and Brett. 3,375,806.

Bretz, Russell G., to Wave Crest Corp. Hydraulic stabilizer for boat steering. 3,374,761, 3-26-68, Cl. 114—150.

Brevitex Etablissement Pour l'Exploitation de Brevets Textiles: *See*—
Milani, Luigi. 3,374,682.

Brewer, Carl T. Drive-tensioning apparatus. 3,374,686, 3-26-68, Cl. 74—242.11.

Briar, Jack E., F. L. Taige, Jr., and H. J. Taige, to Dazey Products Co. Automatic can opener apparatus. 3,374,539, 3-26-68, Cl. 30—4.

Bridges, Richard J., to Koppers Co., Inc. Switching circuits. 3,375,412, 3-26-68, Cl. 317—148.5.

Bridges, Robert M., and W. Nerenstein, to The Bendix Corp. Underwater transducer configuration. 3,375,488, 3-26-68, Cl. 340—8.

Brill, Klaus, to Robert Bosch G.m.b.H. Electrolytic capacitor comprising film-forming metal sheet carrying a dielectric oxide film and a metal dioxide electrolyte layer. 3,375,413, 3-26-68, Cl. 317—230.

Brite, Alan D. Vapor-producing article. 3,374,742, 3-26-68, Cl. 128—187.

British Aircraft Corp. (Operating) Ltd.: *See*—
Rhodes, Arthur N., and Ellison. 3,374,970.

Kurlander, Robert A., and G. M. Nutting. Refuse bag holder. 3,374,976, 3–26–68, Cl. 248—97.

Kurlovich, John. Fishing lure. 3,374,569, 3–26–68, Cl. 43—42.36.

Kuska, Reinhold P., D. Simson, and E. Makowski, to Zaklady Sprzetu Budowlanego Nr 2. Method of making stator windings of electric motors in vibratory-batting devices. 3,374,534, 3–26–68, Cl. 29—605.

Kutscher, Horst : *See*—
Vopel, Eugen, and Kutscher. 3,375,100.

Kyser, Smith, to Aircraft Specialties, Inc. Piston ring compressor. 3,374,526, 3–26–68, Cl. 29—222.

Labbe, Francis A. M. : *See*—
Molins, Desmond W., and Labbe. 3,374,795.

La Cie Hydrolec Vencent Ltée : *See*—
Vincent, Hector. 3,374,879.

Laibson, Jerry, to Whittaker Corp. Antenna structure movable in azimuth and elevation directions. 3,375,523, 3–26–68, Cl. 343—765.

Laing, Nikolaus. Wall structure with means for controlling the radiation transmissivity of the structure. 3,375,321, 3–26–68, Cl. 174—35.

Landini S.p.A. : *See*—
Massone, Luigi. 3,374,846.

Lane, David S. : *See*—
Abbey, Robert, and Lane. 3,375,375.

Lang, Elliot R. : *See*—
Watkins, John A., and Lang. 3,375,512.

Larrison, Millard S., to Small Business Administration, and First National Bank of Morgantown. Polyphosphites. 3,375,304, 3–26–68, Cl. 260—929.

La Rue, Albert D., to Varian Associates. High power electron tube apparatus. 3,374,523, 3–26–68, Cl. 29—157.3.

La Salle Machine Tool, Inc. : *See*—
Sattler, Robert I. 3,374,710.

Laub, Helmut : *See*—
Kunemund, Friedrich, and Laub. 3,375,524.

Lau, Ralph R. : *See*—
Coldren, Daniel R., and Lau. 3,374,979.

Lautore, Ronald M. : *See*—
Furrer, Urs B., and Lautore. 3,374,974.

Laux, David E., and J. M. White, to Radio Corp. of America. Phonograph pickup device. 3,375,012, 3–26–68, Cl. 274—37.

Lavelssiere, Francoise, A. Bonnin, and P. Poirier, to Societe Saint Gobain Techniques Nouvelles. Separating substances in solution as salts by using a colloidal dispersion of mixed ferrocyanides. 3,375,202, 3–26–68, Cl. 252—301.1.

Lawes, Louis F. W., N. G. Shreeve, and N. Mihalik, to Arlside Limited Maidenhead. Developing apparatus for electrophotography. 3,374,768, 3–26–68, Cl. 118—637.

Lawrie, James W., and W. H. Janecek, to Cleveland Container Corp. Jam-up prevention apparatus for a web feeding mechanism. 3,374,716, 3–26–68, Cl. 93—37.

Lay, Ralph B. : *See*—
Hamilton, Earl F., Moore, and Lay. 3,375,040.

Lazzara, Ralph P., to Osley & Whitney, Inc. Sprue bushing and nozzle assembly. 3,374,502, 3–26–68, Cl. 18—30.

Leader, Harold, to Allied Flexible Products Inc. Grass catcher bag. 3,374,612, 3–26–68, Cl. 56—202.

Lebourg, Maurice P., to Schlumberger Technology Corp. Well packer apparatus. 3,374,839, 3–26–68, Cl. 166—131.

Leesona Corp. : *See*—
Oswin, Harry G. 3,375,140.
Tschinkel, Johann G., Schachat, and Urbach. 3,375,139.

Lefelhocz, Joseph R., C. E. Peller, Jr., and A. D. Bergmann, to Diamond Shamrock Corp. Device for measuring pore-fluid pressures. 3,374,664, 3–26–68, Cl. 73—73.

Le Grand, Jesse S., to International Telephone and Telegraph Corp. Receiving station for radio navigation system. 3,375,514, 3–26–68, Cl. 343—6.5.

Lehberger, Arthur N. Spindle advance control for a drill press. 3,374,695, 3–26–68, Cl. 77—32.8.

Leidigh, William J., and D. H. Preist, to Varian Associates. Extended interaction klystron having inductive coupling means communicating between adjacent cavity resonators. 3,375,397, 3–26–68, Cl. 315—5.46.

Leiss, James E., S. Penner, and J. L. Pararas, to United States of America, Commerce. Fluid cooled multi-foil radiation beam window for high power beam tubes. 3,375,387, 3–26–68, Cl. 313—44.

Lemaire, Roland, to Societe Etudes et Fabrications. Manufacture of telephone quads. 3,374,810, 3–26–68, Cl. 140—149.

Lennox Industries Inc. : *See*—
Sieverding, Wayne F. 3,374,831.

Lenzen, Erwin C. Fishhook disgorger. 3,374,570, 3–26–68, Cl. 43—53.5.

Les Laboratoires Bruneau & Cie : *See*—
De Antoni, Jacques J. P. 3,375,248.

Lester, Michael G. : *See*—
Burn, Derek, Lester, and Petrow. 3,375,167.

Leveque, Treffle J. Volume and flow control device. 3,374,803, 3–26–68, Cl. 137—503.

Lever Brothers Co. : *See*—
Abbott, Horace P. 3,374,547.

Levine, Morton, M. J. Neme, and S. G. Plovan, to General Motors Corp. Latent amidopolyamine curing agents for epoxy resins and polyurethanes. 3,375,299, 3–26–68, Cl. 260—830.

Levine, Seymour D. : *See*—
Principe, Pacifico, and Levine. 3,375,269.

Lewis, Mark M. : *See*—
Kesslin, George, Bearman, and Lewis. 3,375,268.

Lewis, Robert W. : *See*—
Calsyn, Lawrence E., and Lewis. 3,375,492.

Licentia, Ekman & Brundin : *See*—
Samuelson, Knut A. S. 3,374,798.

Licentia Patent-Verwaltungs-G.m.b.H. : *See*—
Petzold, Dieter. 3,375,350.

Lienhard, Paul : *See*—
Beffa, Fabio, Lienhard, and Steiner. 3,375,240.

Lightsey, Arthur S. Grain separator chaffer assembly. 3,374,886, 3–26–68, Cl. 209—28.

Lile, John E. : *See*—
Salmon, John L., and Lile. 3,374,978.

Lillston Implement Co. : *See*—
Bazilli, Michael V., Siddall, Moore, and Whitesides. 3,374,956.

Link-Belt Co.: *See*—
Korensky, Edwin, and Tiffin. 3,375,048.
Linneborn, Walter. Method and apparatus for electrostatically applying flock to filament material. 3,375,124, 3–26–68, Cl. 117—17.
Litchman, William S.: *See*—
Fowler, Peter H., and Litchman. 3,375,500.
Litton Industries of Maryland, Inc.: *See*—
Burnham, Fred E. 3,375,519.
Litton Systems, Inc.: *See*—
Pittman, Richard D. 3 5,179.
Shively, Richard P. 3,375,502.
Liva, Robert H.: *See*—
Mallory, Donald G., Cassano, and Liva. 3,374,732.
Locke, Carl E., to Continental Oil Co. Method of confirming the occurrence of plating in electroless nickel-plating. 3,375,178, 3–26–68, Cl. 204—1.
Lockheed Aircraft Corp.: *See*—
Webb, James A., Sr. 3,374,972.
Loeb, William E., to Union Carbide Corp. Photo-masking system using p-xylylene polymers. 3,375,110, 3–26–68, Cl. 96—36.
Logan, Earl A., G. T. Maloney, and R. Carson, to C. R. Bard, Inc. Clamp. 3,374,509, 3–26–68, Cl. 24—81.
Logothetis, Anestic L., to E. I. du Pont de Nemours and Co. (Difluoroamino)sulfur pentafluoride. 3,375,085, 3–26–68, Cl. 23—357.
Lokerson, David T., to United States of America, Army. Drag device. 3,374,973, 3–26–68, Cl. 244—138.
Lomer, Geoffrey J., to Electric & Musical Industries Ltd. Vestigial sideband modulator circuit. 3,375,444, 3–26–68, Cl. 325—136.
Longcore, Milton M., to Glen Mfg., Inc. Sewing machine presser foot. 3,374,759, 3–26–68, Cl. 112—235.
Loosme, Oskar: *See*—
Buhrendorf, Frederick G., and Loosme. 3,375,408.
Lorain Products Corp.: *See*—
Dolamore, Charles D. 3,375,426.
Magner, Richard G., and Flow. 3,375,427.
Mitchell, Jefferson T. 3,375,428.
Lorraine-Escant Societe Anonyme: *See*—
Calmes, Albert H. 3,374,650.
Lotarius, Charles R. Game guide. 3,374,557, 3–26–68, Cl. 35—29.
Lowe, Estel G. Continuous turning slip ring assembly. 3,375,479, 3–26–68, Cl. 339—5.
Lowe, Leonard A.: *See*—
Haggerty, John K., Lowe, McHale, Unger, and White. 3,375,433.
Lucas, Joseph (Industries) Ltd.: *See*—
Cook, Morris J., and Freeman. 3,375,431.
Yates, Thomas C. 3,374,622.
Lucas, Ralph G.: *See*—
Purington, Ellison S., and Chaffee. 3,375,328.
Lucht, Wilbert A.: *See*—
Adams, William E., and Lucht. 3,374,619.
Lucky, Robert W., to Bell Telephone Laboratories, Inc. Automatic equalizer for analog channels having means for comparing two test pulses, one pulse traversing the transmission channel and equalizer. 3,375,473, 3–26–68, Cl. 333—18.
Ludwig, Herbert. Mold assembly with composite sole plate for double injection. 3,374,504, 3–26–68, Cl. 18—42.
Lukes, George E.: *See*—
Brokke, Mervin E., Lukes, and Arneklev. 3,375,277.
Lummus Co., The: *See*—
Bloomer, Ward J. 3,375,188.
Tucker, William. 3,374,832.
Lundberg, Ronald E., and F. J. Wegrzyn, to E. I. du Pont de Nemours and Co. Method and apparatus for applying continuous lengths of polymeric film to the sides of a rigid substrate. 3,375,152, 3–26–68, Cl. 156—212.
Lustig, Howard E.: *See*—
Rossoff, Arthur L., and Lustig. 3,375,353.
Lyman, Brooks, to Pitney-Bowes, Inc. Fluid flow control system. 3,374,799, 3–26–68, Cl. 137—81.5.
Lynch, Dunstan W. P., to Vanadium Corp. of America. Method for the production of fine grained steel. 3,375,105, 3–26–68, Cl. 75—129.
Lyshkow, Norman A., to Precision Scientific Co. Colorimetric reagent for analysis of nitrogen dioxide in air and method of use. 3,375,079, 3–26–68, Cl. 23—232.
Maatschappij van Berkel's Patent N.V.: *See*—
Dekker, Launcelot, and Ryan. 3,375,357.
MacCleaster-Schwarz: *See*—
Maeder, Paul F. 3,374,670.
MacKay, Alden J., to Baxter Woolen Co., Inc. Splash yarn. 3,374,506, 3–26–68, Cl. 19—99.
Mader, Arthur H., and S. King, to General Precision Systems Inc. Doppler signal simulator. 3,375,518, 3–26–68, Cl. 343—17.7.
Madsen, R. Glen, to Astrodata, Inc. Loop filter for phase locked loop frequency detector. 3,375,463, 3–26–68, Cl. 331—17.
Maeder, Paul F., to MacCleaster-Schwarz. Navigation instrumentation. 3,374,670, 3–26–68, Cl. 73—178.
Mages, David H., to Webtron Corp. Butt cutting roll with removable blade and press fit guide bearings and method of making same. 3,374,700, 3–26–68, Cl. 83—674.
Magner, Richard G., and R. J. Plow, to Lorain Products Corp. Polyphase rectifier. 3,375,427, 3–26–68, Cl. 321—5.
Magoos, George P.: *See*—
Richards, Dennis, Bader, and Magoos. 3,374,679.
Mahaffy & Harder Engineering Co.: *See*—
Hamilton, Joel A. 3,374,602.
Maher, Philip K.: *See*—
McDaniel, Carl V., and Maher. 3,375,065.
Mahler, Georg: *See*—
Smeykal, Karl, Pritzkow, Hauthal, and Mahler. 3,375,290.
Maier, Cletus E., to General Electric Co. Electron discharge device. 3,375,395, 3–26–68, Cl. 313—318.
Mais, James W., to The Singer Co. Silicon controlled rectifier circuit arrangement for sewing machine drives. 3,374,758, 3–26–68, Cl. 112—220.
Makowski, Eugeniusz: *See*—
Kuska, Reinhold, Simon, and Makowski. 3,374,534.
Mallory, Donald G., J. R. Cassano, and R. H. Liva, to Xerox Corp. Self-aligning copy drum strip-out mechanism for reproduction machines. 3,374,732, 3–26–68, Cl. 101—132.
Mallory, P. R., & Co. Inc.: *See*—
Dotto, Gianni A. 3,374,689.
Maloney, George T.: *See*—
Logan, Earl A., Maloney, and Carson. 3,374,509.
Manes, Milton, to Pittsburgh Activated Carbon Co. Silver impregnated carbon. 3,374,608, 3–26–68, Cl. 55—72.
Manganese Chemicals Corp.: *See*—
Welsh, Jay Y. 3,375,097.
Mansson, Ragnar, and H. Skar, to Allmanna Svenska Elektriska Aktiebolaget. Fuel assembly for nuclear reactors. 3,375,172, 3–26–68, Cl. 176—78.
Maquire, Leo R., to Crompton & Knowles Corp. Textile treating apparatus with a plastic coated or metal roll having left- and right-hand helical threads. 3,374,648, 3–26–68, Cl. 68—180.
Marasso, Fred D.: *See*—
Rademacher, Robert E., and Marasso. 3,374,600.
Marathon Oil Co.: *See*—
Argabright, Perry A. 3,375,285.
Marconi Co. Ltd., The: *See*—
Mayhew, Antony J. 3,375,323.
Marcus, Konrad H., to Donnelly Mirrors, Inc. Visor-mirror assembly. 3,375,364, 3–26–68, Cl. 240—4.2.
Marez, John, to United States of America, Navy. High-speed waveform synthesizer. 3,375,360, 3–26–68, Cl. 235—197.
Marks, Marvin D., to McDonnell Aircraft Corp. Combination subsonic and supersonic propulsion system and apparatus. 3,374,631, 3–26–68, Cl. 60—244.
Marley, David J., to The Garrett Corp. Foil thrust bearing arrangements. 3,375,046, 3–26–68, Cl. 308—164.
Marra, Daniel A., Jr., to N. White. Protective devices for torch tips. 3,375,090, 3–26–68, Cl. 29—183.5.
Marsen, Richard A.: *See*—
Mayer, Helmut O. 3,374,667.
Marsh, Jerald S., to Viking Pump Co. Pump. 3,374,748, 3–26–68, Cl. 103—126.
Marshall, William E., to Armco Steel Corp. Gaseous reduction of pelletized iron ores. 3,375,098, 3–26–68, Cl. 75—35.
Marshall, William E., to Armco Steel Corp. Production of iron from iron ores. 3,375,099, 3–26–68, Cl. 75—35.
Marson Fastener Corp.: *See*—
Di Maio, Anthony E. 3,374,656.
Martellotto, Nicholas A.: *See*—
Ghiron, Hugo, Harr, and Martellotto. 3,375,499.
Martin, Donald L.: *See*—
Hansen, Kenneth W., and Martin. 3,375,317.
Martin, James B., to The Procter & Gamble Co. Monoacyl diol hydrogen dicarboxylates. 3,375,262, 3–26–68, Cl. 260—404.8.
Martin, John B.: *See*—
Goheen, David W., and Martin. 3,375,283.
Martin, John C., to Bunn-O-Matic Corp. One piece funnel with integral ribs for holding disposable coffee carrying filter. 3,374,897, 3–26–68, Cl. 210—455.
Martin-Marietta Corp.: *See*—
Thompson, Leonard W., and Preston. 3,375,474.
Martin, Randell E.: *See*—
Pike, Roscoe A., and Martin. 3,375,232.
Martinides, Ivo, to Georg Fischer Aktiengesellschaft. Control circuit for machine tool having cam operated electronic switch means. 3,375,404, 3–26–68, Cl. 315—360.
Marvel Engineering Co.: *See*—
Kudlaty, Walter J. 3,374,890.
Maschinenfabrik Augsburg-Nurnberg, A.G.: *See*—
Held, Gerhard. 3,374,774.
Mason, Daniel F. Diver's weight belt. 3,374,636, 3–26–68, Cl. 61—70.
Mason, John L., to Sanders Associates, Inc. Analog multiplier. 3,375,359, 3–26–68, Cl. 235—194.
Massone, Luigi, to Landini S.p.A. Steering and braking hydraulics. 3,374,846, 3–26–68, Cl. 180—6.7.
Mather, William B., Jr., to Texaco, Inc. Fuel cell and electrolyte comprising a boro-phosphoric acid-phosphoric acid gel. 3,375,138, 3–26–68, Cl. 136—86.
Matthew, Windell. Honing tools and method. 3,374,516, 3–26–68, Cl. 29—76.
Mauer, Erich: *See*—
Gawlick, Heinz, Stahlmann, and Mauer. 3,374,738.
Maurer, John A., to The Weber Dental Mfg. Co. Dental syringe with novel nozzle tip. 3,374,789, 3–26–68, Cl. 128—173.1.
May, Patrick L., C. G. Vidrine, and R. E. Beyer, to International Harvester Co. Agricultural apparatus. 3,374,729, 3–26–68, Cl. 100—142.
Mayer, Franz, and A. Meisner, to Diehl. Synchronous motor, especially for electric clocks. 3,375,423, 3–26–68, Cl. 318—138.
Mayer, Helmut O., 30% to R. A. Marsen. Tester system for diesel fuel pumps. 3,374,667, 3–26–68, Cl. 73—119.
Mayhew, Antony J., to The Marconi Co. Ltd. Multi-layer printed circuit terminal arrangement and method of making same. 3,375,323, 3–26–68, Cl. 174—68.5.
Mayhorne, Irene B., to External female urinal. 3,374,790, 3–26–68, Cl. 128—295.

McBrayer, Marvin L., to Moisture Register Co. Roller electrode probe for electrical moisture testing instrument having a rotatable outer cylinder concentric with fired inner cylinder electrode. 3,375,441, 3–26–68, Cl. 324—61.
McClellan, Melvin L., to Union Carbide Corp. Method of producing magnesium ferrosilicon. 3,375,104, 3–26–68, Cl. 75—129.
McClure, Charles A. Strand treatment. 3,374,514, 3–26–68, Cl. 28—72.
McColm, George L. Calendar calculator. 3,374,948, 3–26–68, Cl. 235—88.
McCutcheon, Samuel R., and R. E. Webb, to Tektronix, Inc. Peak memory circuit employing comparator for controlling voltage of storage capacitor. 3,375,501, 3–26–68, Cl. 340—173.
McDaniel, Carl V., and P. K. Maher, to W. R. Grace & Co. Method of cation exchanging synthetic faujasite. 3,375,065, 3–26–68, Cl. 23—112.
McDaniel, Oliver H., and J. H. Prout, to United States of America, Navy. Radiated power level meter. 3,375,487, 3–26–68, Cl. 340—5.
McDonald, Samuel A. Fruit picker. 3,374,613, 3–26–68, Cl. 56—334.
McDonnell Aircraft Corp.: *See*—
Marks, Marvin D. 3,374,631.
McEuen, John M.: *See*—
Breckoff, Walter E., and McEuen. 3,375,293.
McGarrell, Paul H., to The Bunker Ramo Corp. Signal generating circuits for machine tool control systems. 3,375,354, 3–26–68, Cl. 235—151.11.
McGill, Charles K.: *See*—
Cislak, Francis E., McGill, and Campbell. 3,375,255.
McGuckin, Melvin E., to Hamilton Co. Head space sampler. 3,374,678, 3–26–68, Cl. 73—421.5.
McHale, Peter C.: *See*—
Haggerty, John K., Lowe, McHale, Unger, and White. 3,375,433.
McHenry, Keith W., Jr., H. M. Brennan, and E. L. D'Ouville, to Standard Oil Co. Soluble platinum content of first reactor below 40% and subsequent reactor above 40%. 3,375,190, 3–26–68, Cl. 208—65.
McHugh, William E., and A. A. Shoudy, Jr., to Atomic Power Development Associates, Inc. Method for minimizing corrosion of reactor elements. 3,375,169, 3–26–68, Cl. 176—30.
McKean, Joseph T.: *See*—
Barber, Richard H., and McKean. 3,375,382.
McKeon, James E.: *See*—
Tinsley, Samuel W., Rick, and McKeon. 3,375,287.
McKinney, Carlton B., and W. M. Sheppard, to Hamilton Co. Inlet for chromatographs and the like. 3,374,660, 3–26–68, Cl. 73—23.1.
McKinney Mfg. Co.: *See*—
Horstman, Robert L. 3,374,499.
McKissick, Dale C., and J. H. Bauer, to American Standard Inc. Determination of carbon equivalence of hypereutectic cast iron. 3,375,106, 3–26–68, Cl. 75—130.
McLeroy, Charles R., V. J. Rossitto, and E. H. Robb, to Metal Cladding, Inc. Demountable rail fence. 3,374,986, 3–26–68, Cl. 256—59.
McNanama, Charles E. Positioning and retaining device system for logs in a high capacity sawmill employing a horizontal traversing bandsaw adjustably mounted over the log being sawed. 3,374,812, 3–26–68, Cl. 143—19.
McMaster, Harold A., and P. J. Reising, to Permaglass Inc. Method and apparatus for shaping glass or the like on a curved glass support bed. 3,375,094, 3–26–68, Cl. 65—25.
McMeekin, James H.: *See*—
Paruolo, Miller J., and McMeekin. 3,374,887.
McMenimen, William R. Disposable containers with liquid trap. 3,374,939, 3–26–68, Cl. 229—53.
McMinn, Robert E., to Black, Sivalls & Bryson, Inc. Refrigeration method and apparatus for cyclical requirements. 3,374,642, 3–26–68, Cl. 62—115.
McMullen, John C., to The Carborundum Co. Process and apparatus for effecting solid-state reactions. 3,375,073, 3–26–68, Cl. 23—204.
McMullen, John J.: *See*—
Basile, Norman K., and Yearwood. 3,374,638.
Burke, Charles A., Gale, and Basile. 3,374,639.
Corvino, Ralph A., and Basile. 3,374,641.
McTaggart, James E., to Dominon Electrohome Industries Ltd. Frequency control transistor connected across capacitor of oscillator. 3,375,462, 3–26–68, Cl. 331—8.
Medical Specialties, Inc.: *See*—
Gaylord, John F., Jr. 3,374,785.

Gianinazzi, Rolando. 3,374,754.
Meheen, Homayoun J. Apparatus for erecting a bridge arch. 3,374,497, 3–26–68, Cl. 14—26.
Meisner, Alfred: *See*—
Mayer, Franz, and Meisner. 3,375,423.
Mellor, Clarence H., to Fenwal Inc. Plasma arc spraying of hafnium oxide and zirconium boride mixtures. 3,375,127, 3–26–68, Cl. 117—93.1.
Mellott, Robert N., and J. J. Phelan, to United States of America, Navy. Maintenance of power supply regulation during low line transients. 3,375,437, 3–26–68, Cl. 323—22.
Melodie Vendor Corp.: *See*—
Ristau, Arnold E. and A. G. 3,374,925.
Melpar, Inc.: *See*—
Garner, Philip L., and Fuschillo. 3,375,143.
Moulton, Charles W., Hacskaylo, and Feldman. 3,375,135.
Menichelli, Vincent J., to United States of America, Navy. Explosive bolt. 3,374,702, 3–26–68, Cl. 85—1.
Menu, Edouard, to Societe Fives Lille-Cail. Storage apparatus for dummy ingots. 3,374,828, 3–26–68, Cl. 164—274.
Menzel, Thomas C., and J. E. Gerrard, to Esso Research and Engineering Co. Photo-pyrometric control system for efficient combustion in multiple-burner, residual-fuel-fired furnaces. 3,374,950, 3–26–68, Cl. 236—15.
Merck & Co., Inc.: *See*—
Arth, Glen E., Johnston, and Sarett. 3,375,261.
Harman, Robert E., Kuehl, Strachan, and Hirschmann. 3,375,166.
Merrill, Duane F., to General Electric Co. Method for polymerizing organopolysiloxanes. 3,375,223, 3–26–68, Cl. 260—46.5.
Merrill, Stewart H.: *See*—
Borden, Douglas G., Unruh, and Merrill. 3,375,229.
Mesnel, Francois, to Societe Anonyme des Etablissements. Strip members for forming slideways for glass panes. 3,374,578, 3–26–68, Cl. 49—440.
Metal Cladding, Inc.: *See*—
McLeroy, Charles R., Rossitto, and Robb. 3,374,986.
Metz, Joseph R., to Norco, Inc. Releasable clasp. 3,374,512, 3–26–68, Cl. 24—241.
Meyer, George E.: *See*—
Tillisch, Paul W., Meyer, and Papalia. 3,374,591.
Meyer, Joseph W. Table top football game. 3,375,007, 3–26–68, Cl. 273—94.
Miale, Joseph N., and P. B. Weisz, to Mobil Oil Corp. Production of the hydrogen ion exchanged form of a crystalline zeolite. 3,375,064, 3–26–68, Cl. 23—111.
Michael, Vesta F., to Rock Island Oil & Refining Co., Inc. Labeled article and method for forming same. 3,374,807, 3–26–68, Cl. 138—144.
Michie, Thomas J., and J. C. Bigham; said Bigham, assor. to said Michie. Aquarium. 3,374,771, 3–26–68, Cl. 119—5.
Microwave Associates Inc.: *See*—
Walker, Richard M. 3,375,472.
Mifalei Yam Hamelah, B. M.: *See*—
Bloch, Moshe R., and Schnerb. 3,375,077.

Ouchi, Shunji, Sowa, Yamada, Tsunoda, Kurihara, and Senoo. 3,375,244.
Yamada, Shiyunichi, T. Kurano, to Sankyo Chemical Industries Ltd. Process for the production of 2-methyl-1,4-diazabicyclo-(2,2,2)-octane. 3,375,252, 3–26–68, Cl. 260—268.
Yamamoto, Yujiro, to North American Rockwell Corp. Method and apparatus for testing magnetic heads utilizing a vibrating wire carrying current. 3,375,439, 3–26–68, Cl. 324—34.
Yamauchi, Fumio: *See*—
Akashi, Tsuneo, Takahashi, Yamauchi, Tsubouchi, and Ohno. 3,375,194.
Yara Engineering Corp.: *See*—
Engel, Edward G. 3,375,025.
Yarway Corp.: *See*—
Hetz, Heinz K. 3,374,750.
Yates, P. B., Machine Co. Ltd., The: *See*—
Alich, John A. 3,374,816.
Yates, Thomas C., to Joseph Lucas (Industries) Ltd. Fuel systems for gas turbine engines. 3,374,642, 3–26–68, Cl. 60—39.28.
Yawata Chemical Industry Co., Ltd.: *See*—
Murakami, Kelichi, Hanada, and Miyairi. 3,375,066.
Yearwood, Donald R.: *See*—
Basile, Norman K., and Yearwood. 3,374,638.
Yodis, Anthony W., and W. J. Cunningham, to Allied Chemical Corp. Preparation of perchloryl fluoride. 3,375,072, 3–26–68, Cl. 23—203.
Yoshimi, Naoki: *See*—
Iwai, Shinji, Yoshimi, Mita, and Shiode. 3,375,302.
Young, Elmer L., to General Motors Corp. Rotor means connection. 3,375,385, 3–26–68, Cl. 310—261.
Young, Howard S., to E. I. du Pont de Nemours and Co. Germanium selenides and processes for their production. 3,375,071, 3–26–68, Cl. 23—204.
Young, James F., and J. D. Ferguson, to Sarong, Inc. Non-roll foundation garment. 3,374,793, 3–26–68, Cl. 128—533.
Young, Niels O., to Block Engineering, Inc. Loop erection system. 3,374,933, 3–26–68, Cl. 226—118.
Youssi, Dale J., and E. L. Brandt, to Alcoa, Inc. Self-storing storm doors. 3,374,822, 3–26–68, Cl. 160—91.
Yuasa, Sachio: *See*—
Fukui, Kenichi, Yuasa, Kagiya, Shimizu, and Sano. 3,375,231.
Yudewitz, Norman, to American Machine & Foundry Co. Reversible counting devices. 3,375,349, 3–26–68, Cl. 235—92.
Zaidanhojin Nitto Rikagaku Kenkyujo: *See*—
Onodera, Norio, Nishide, and Takahashi. 3,375,088.
Zaklady Sprzetu Budowlanego Nr 2: *See*—
Kuska, Reinhold P., Simson, and Makowski. 3,374,534.
Zalay, Andrew W.: *See*—
Kirchner, Frederick K., and Zalay. 3,375,250.
Zawacki, Martin R. Flood detector. 3,374,764, 3–26–68, Cl. 116—109.
Zeidler, Herman R. Adjustable V bearing for guiding translating shafts. 3,375,045. 3–26–68, Cl. 308—6.
Zeigler, Paul P., to Kaiser Aluminum & Chemical Corp. Strip leveling apparatus. 3,374,653, 3–26–68, Cl. 72—161.
Zenhausern, Heinrich. Method of making a wall-rung. 3,374,532, 3–26–68, Cl. 29—505.
Zika, Harry T., and L. F. Theiling, Jr., to Union Carbide Corp. Process for purifying and decolorizing alkylphenol-ethylene oxide adducts. 3,375,284, 3–26–68, Cl. 260—613.
Zimmerman, Harold M. Bottom type silo unloader. 3,374,906, 3–26–68, Cl. 214—17.
Zinsco Electrical Products: *See*—
Sturdivan, Rex E. 3,375,409.
Zipper, Donald H., to Continental Can Co., Inc. Tamper-proof package. 3,374,913, 3–26–68, Cl. 215—39.
Zirbel, Nicholas N., to Independent Exploration Co. Recording apparatus. 3,375,527, 3–26–68, Cl. 346—74.
Zygan, Hieronymus, O. Koch, H. Schnell, A. Prietzschk, and K. Römling, to Farbenfabriken Bayer Aktiengesellschaft. Process for the continuous biaxial stretching of a traveling sheet. 3,375,313, 3–26–68, Cl. 264—289.

CLASSIFICATION OF PATENTS

ISSUED MARCH 26, 1968

NOTE.—First number, class; second number, subclass; third number, patent number

2—161	3,374,487	29—613	3,374,536	60— 52	3,374,625	83—171	3,374,698	117—228	3,375,132	165— 96	3,374,830

Reg. No. 836,516 (STRIPES OF FASHION), Ventura Travelware, Inc. Luggage, attache cases, and trunks, **filed** Dec. 6, 1967, D.C., S.D.N.Y., Doc. 67–C–4783, *Universal Luggage Co., Inc. and Ventura Travelware, Inc.* v. *Air King Luggage Co., Inc.*

MARKS PUBLISHED FOR OPPOSITION

SECTION 1

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Application for the registration of these marks in more than one class has been filed as provided in section 30 of said act as amended by Public Law 772, 87th Congress, approved Oct. 9, 1962, 76 Stat. 769. Opposition under section 13 may be filed within thirty days of this publication. See Rules 2.101 to 2.105.

A separate fee of twenty-five dollars for each class opposed must accompany the opposition.

[**NOTE:** For publication of marks presented in applications for registration in one class, see section 2.]

SN 242,905. Micro-Radionics, Incorporated, Van Nuys, Calif. Filed Apr. 7, 1966.

MRI

Class 21—Electrical Apparatus, Machines, and Supplies

For Microwave Electrical Apparatus—Namely, Packaged Circuit Networks, Junction Boxes, Receivers, Power Supplies, Switches, Signal Generators, Attenuators and Mixers, Waveguide Assemblies, Modulators, Antennas, and Transmission Lines (Int. Cl. 9).

Class 26—Measuring and Scientific Appliances

For Microwave Test Equipment—Namely, Transponder Checkout Sets, Radar System Checkout and Test Units, Special Purpose Microwave Test Equipment (Int. Cl. 9).

First use on or about Feb. 1, 1962.

SN 256,815. Bellair Cosmetics Limited, Oldham, England. Filed Oct. 20, 1966.

BELLAIR

Priority claimed under Sec. 44(d) on British Reg. No. 896,604, dated June 30, 1966.

Class 51—Cosmetics and Toilet Preparations

For Hair Spray (Int. Cl. 3).

Class 52—Detergents and Soaps

For Hair Shampoo (Int. Cl. 3).

SN 253,388. Williams Brothers Company, Tulsa, Okla. Filed Aug. 29, 1966.

WILLIAMS BROTHERS

Class 100—Miscellaneous

For Surveying, Planning, Designing, and Engineering Services Relating to Pipeline Construction and Operation (Int. Cl. 42).

Class 103—Construction and Repair

For Installation, Construction, and Operation of Pipelines (Int. Cl. 37).

First use at least as early as Oct. 19, 1954; at least as early as Apr. 26, 1951, in a different form.

SN 255,147. The Wurlitzer Company, Chicago, Ill. Filed Sept. 26, 1966.

WURLITZER

Owner of Reg. Nos. 214,557, 219,563, and 504,653.

Class 21—Electrical Apparatus, Machines, and Supplies

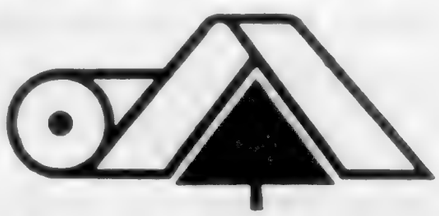
For Radio Receiving Sets and Television Receiving Sets, and Parts Thereof (Int. Cl. 9).

Class 36—Musical Instruments and Supplies

For Home Phonographs and Magnetic Tape Recorders, and Parts Thereof (Int. Cl. 9).

First use on or before May 21, 1925.

SN 258,437. Prince George Pulp and Paper Limited, Vancouver, British Columbia, Canada. Filed Nov. 14, 1966.



Priority claimed under Sec. 44(d) on Canadian application filed July 2, 1966; Reg. No. 153,813, dated Oct. 20, 1967.

Class 1—Raw or Partly Prepared Materials

For Sulphate Woodpulp (Int. Cl. 1).

Class 37—Paper and Stationery

For Sack Kraft Paper (Int. Cl. 16).

First use July 1, 1966; in commerce Aug. 1, 1966.

SN 262,655. Barber-Greene Company, Aurora, Ill. Filed Jan. 17, 1967.

ANTICIPATING TOMORROW

Class 100—Miscellaneous

For Designing and Planning Services in the Field of Construction (Int. Cl. 42).

Class 103—Construction and Repair

For Rental of Earth Moving Equipment and Installation Services (Int. Cl. 37).

First use Jan. 27, 1966.

SN 277,962. The J. B. Williams Company, Inc., New York, N.Y. Filed Aug. 10, 1967.

FROST LIME

The word "Lime" is disclaimed apart from the mark as shown.

Class 51—Cosmetics and Toilet Preparations

For Cologne, Shave Cream, Pre-Shave Lotion, Shave Talc, and Personal Deodorant (Int. Cls. 3 and 5).

Class 52—Detergents and Soaps

For Toilet Soap on a Rope (Int. Cl. 8).

First use June 26, 1967.

SN 281,744. International Textbook Company, Scranton, Pa. Filed Oct. 4, 1967.

INTERTEXT

Class 101—Advertising and Business

For Printing, Electrotyping, and Publishing Services (Int. Cl. 35).

Class 106—Material Treatment

For Bookbinding Services (Int. Cl. 40).

Class 107—Education and Entertainment

For Conducting Correspondence Courses and Inplant Training Programs for Others (Int. Cl. 41).

First use Sept. 18, 1967.

SN 286,787. Kokoku Rayon and Pulp Co., Ltd., Minato-ku, Tokyo, Japan. Filed Dec. 13, 1967.

KOJIN

Owner of Japanese Reg. Nos. 470,289, dated Sept. 9, 1955, and 652,825, dated Sept. 14, 1964.

Class 1—Raw or Partly Prepared Materials

For Natural and Raw Synthetic Fibers (Int. Cl. 22).

Class 43—Thread and Yarn

For Cotton Yarn (Int. Cl. 23).

SECTION 2

The following marks are published in compliance with section 12(a) of the Trademark Act of 1946. Opposition under section 13 may be filed within thirty days of publication. See Rules 2.101 to 2.105.

A fee of twenty-five dollars must accompany the opposition.

[NOTE: For publication of marks presented in a combined application for registration in more than one class, see section 1.]

Class 1—Raw or Partly Prepared Materials

SN 265,898. W. R. Grace & Co., New York, N.Y. Filed Mar. 3, 1967.

GRACON

For Vinyl Plastic Material in Pellet or Powder Form (Int. Cl. 1).

First use Feb. 2, 1967.

SN 268,715. Gus Dettelbach, d.b.a. Georgia-Tennessee Mining & Chemical Co., Atlanta, Ga. Filed Apr. 10, 1967.

Meow

For Absorbent Mineral Used in Cat Boxes for the Deodorization and Easy Disposition of Feces of Cats and Other Pets (Int. Cl. 5).

First use on or about Sept. 20, 1966.

SN 268,893. Petro-Tex Chemical Corporation, Houston, Tex. Filed Apr. 11, 1967.

For the purposes of registration no claim is made to the exclusive right to use of the word "Neoprene" and the representation of the State of Texas, but applicant waives none of its common law rights in the mark therein. Owner of Reg. Nos. 634,721 and 661,245.

For Neoprene and Neoprene Compositions Sold as Raw Materials Which in Turn May Be Used in the Manufacture of Adhesives and Synthetic Rubber Products, Wire and Cable Coating, and Other Manufactured Products (Int. Cl. 17).

First use Sept. 9, 1966.

SN 286,479. Minnesota Mining and Manufacturing Company, St. Paul, Minn. Filed Dec. 8, 1967.

3m

Owner of Reg. Nos. 749,591 and 778,914.

For Resin Used for Making Insoles for Shoes (Int. Cl. 1).

First use Nov. 7, 1967.

Class 2—Receptacles

SN 234,082. Speko Products, Inc., Chicago, Ill. Filed Dec. 6, 1965.

BIN-KANISTER

Owner of Reg. No. 726,610.

For Household Storage and Dispensing Containers—Namely, Canister Cabinets (Int. Cl. 21).

First use July 1, 1960.

SN 250,952. Freeman & Gossage, Inc., San Francisco, Calif. Filed July 25, 1966.

SARATOGA TRUNK

Applicant disclaims the word "Trunk" apart from the mark.

For Demountable Ornamental Boxes for Storage Purposes (Int. Cl. 20).

First use on or about May 11, 1965.

SN 263,243. American Cyanamid Company, Wayne, N.J. Filed Jan. 25, 1967.

VERAGLO

For Plastic Dinnerware (Int. Cl. 21).

First use Dec. 30, 1966.

SN 265,856. Universal Tank & Iron Works, Inc., Indianapolis, Ind. Filed Mar. 2, 1967.

UNI-SPHERE

For Pedestal Water Storage Tanks (Int. Cl. 6).
First use March 1962.

SN 274,650. Plantabbs Corporation, Timonium, Md. Filed June 23, 1967.

ROYAL

GARDEN

For Plastic Pottery (Int. Cl. 21).
First use May 3, 1967.

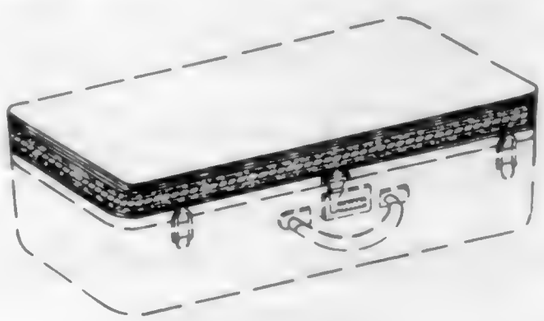
SN 276,833. The Greif Bros. Cooperage Corporation, St. Paul, Minn. Filed July 26, 1967.

SEED KRAFT

Applicant disclaims the word "Kraft" apart from the mark as shown.
For Multi-Wall Paper and Plastic Bags (Int. Cl. 16).
First use Oct. 1, 1966.

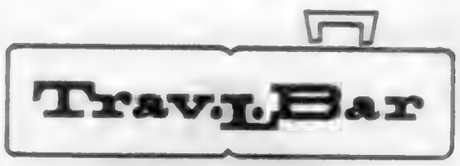
Class 3 — Baggage, Animal Equipments, Portfolios, and Pocketbooks

SN 254,002. Ventura Travelware, Inc., New York, N.Y. Filed Sept. 7, 1966.



The drawing is lined for the colors red, gold, and green. The representation of the suitcase on the drawing is disclaimed apart from the mark as shown.
For Luggage, Attache Cases, and Trunks (Int. Cl. 18).
First use June 6, 1966.

SN 255,790. Ever-Wear, Inc., Chicago, Ill. Filed Oct. 5, 1966.



Applicant disclaims the term "Trav·L·Bar" when used separate and apart from the mark, except for the design feature thereof.
For Fitted Luggage (Int. Cl. 18).
First use June 1966; May 1956 as to "Trav·L·Bar."

SN 267,834. Lucien Piccard Watch Corp., New York, N.Y., assignee of Lucien Piccard Sportswear Ltd., New York, N.Y. Filed Mar. 29, 1967.

"Lucien Piccard" is not the name of any known living individual.
For Leather Goods—Namely, Billfolds, Key Cases, Wallets, and Money Clips (Int. Cl. 18).
First use Dec. 4, 1965.

Class 4 — Abrasives and Polishing Materials

SN 258,663. Armstrong Cork Company, Lancaster, Pa. Filed Nov. 15, 1966.

MIRASHEEN

For Polymeric Latex for Polishing Floors (Int. Cl. 3).
First use Oct. 31, 1966.

SN 262,515. Clifton T. Spear, d.b.a. The Diamond Spear Co., Texarkana, Tex. Filed Jan. 13, 1967.

PERMA-SHEEN

For Metal Polishing Cloth Impregnated With Metal Polish and Metal Polishing Creme (Int. Cl. 21).
First use in 1927.

SN 272,002. Armour and Company, d.b.a. Armour Abrasives Company, Chicago, Ill. Filed May 22, 1967.

STAR RESILITE

Owner of Reg. No. 516,820.
For Coated Abrasives in the Form of Sheets and Belts (Int. Cl. 3).
First use on or prior to May 1, 1967.

SN 283,381. Alberto-Culver Company, Melrose Park, Ill. Filed Oct. 26, 1967.

SURRENDER

For Furniture Polish (Int. Cl. 3).
First use July 31, 1967.

Class 5 — Adhesives

SN 258,791. Eaton Allen Corp., Brooklyn, N.Y. Filed Nov. 16, 1966.

The word "Glue" is disclaimed apart from the mark as shown. The drawing is lined for the color red-violet. Owner of Reg. Nos. 724,626 and 736,991.

For Pencil-Type Adhesive Applicators, Sold Filled (Int. Cl. 1).

First use Sept. 29, 1966.

Class 6 — Chemicals and Chemical Compositions

SN 273,822. Wyrough and Loser, Inc., Trenton, N.J. Filed June 13, 1967.

For Vulcanizing Agents, Drying Agents, Reinforcing Fillers and Extenders, Anti-Aging Agents, Low Temperature Flexibilizing Agents, Heat-Stabilizing Agents, Anti-Radiation Agents, Antioxidants, Fluorescent Marking Agents, Chemical Stabilizing Agents, Pigments, Blowing Agents, Vulcanization Retarding Agents, and Flame Retarding Agents for Addition to Natural and Synthetic Rubbers and Synthetic Plastics (Int. Cls. 1 and 2).

First use Sept. 1, 1958.

SN 274,643. Ohio Valley Specialty Chemical Company, Marietta, Ohio. Filed June 23, 1967.

OV-1

For High Temperature Stability Gas Chromatographic Liquid Substrate (Int. Cl. 1).

First use January 1966.

SN 274,644. Ohio Valley Specialty Chemical Company, Marietta, Ohio. Filed June 23, 1967.

OV-17

For High Temperature Stability Gas Chromatographic Liquid Substrate (Int. Cl. 1).

First use Mar. 15, 1966.

Class 8 — Smokers' Articles, Not Including Tobacco Products

SN 261,243. Robert F. Winans, Doylestown, Pa. Filed Dec. 21, 1966.

AMBOSELI

For Smoking Pipes (Int. Cl. 34).

First use on or about Sept. 18, 1958.

SN 277,902. Nathan Einhorn, Philadelphia, Pa. Filed Aug. 9, 1967.

SPIRO

For Pipes, Cigarette Mouthpieces, and Cigar Mouthpieces (Int. Cl. 34).

First use Feb. 1, 1950.

Class 11 — Inks and Inking Materials

SN 272,016. Howers Printing Ink Company, Chicago, Ill. Filed May 22, 1967.

CRYSTAL-BRITE

Owner of Reg. No. 804,119.

For Printing Ink (Int. Cl. 2).

First use Jan. 24, 1967.

Class 12 — Construction Materials

SN 252,811. Butler Manufacturing Company, Kansas City, Mo. Filed Aug. 22, 1966.

BUTLER*PANL

Owner of Reg. Nos. 528,706, 788,379, and others.

For Preformed Metal Panels for Buildings and the Like (Int. Cl. 6).

First use May 17, 1966; in or about 1916 as to "Butler."

SN 258,550. Johns-Manville Corporation, New York, N.Y. Filed Nov. 14, 1966.

FIRE-KING

For Roofing Shingles (Int. Cl. 19).

First use on or about Aug. 10, 1966.

SN 258,551. Johns-Manville Corporation, New York, N.Y. Filed Nov. 14, 1966.

FGA

For Roofing Shingles, Underlayment Felt, and Other Roofing Products Containing Fiber Glass and Asbestos (Int. Cl. 19).

First use May 2, 1966.

SN 261,530. Spring Hill Fuel Co., d.b.a. Aluminum Detail Products, Seattle, Wash. Filed Dec. 27, 1966.

ANOWHITE

For Metal Building Materials—Namely, Metal Sheets and Extrusions Formed and Fabricated for Application to Buildings, Doors, Windows, Screens for Doors and Windows, Downspouts and Gutters (Int. Cl. 6).

First use Dec. 13, 1966.

SN 263,930. Majestic Tile Company, Chicago, Ill. Filed Feb. 3, 1967.

INDEPENDENCE

For Imitation Brick Facing (Int. Cl. 19).
First use Sept. 10, 1965.

SN 273,061. The Gibson-Homans Company, Cleveland, Ohio. Filed June 5, 1967.

HANDI-SEAL

Owner of Reg. Nos. 692,274, 761,814, and others.
For Calking Compound (Int. Cl. 17).
First use at least as early as June 13, 1966.

SN 273,277. W. R. Grace & Co., New York, N.Y. Filed June 7, 1967.

PORETE

Owner of Reg. No. 623,868.
For Metal Reinforced Concrete Channel Slabs (Int. Cl. 19).
First use Aug. 16, 1946.

SN 274,638. W. R. Meadows, Inc., Elgin, Ill. Filed June 23, 1967.

GARDOX

For Joint Sealing Compound (Int. Cl. 17).
First use Dec. 14, 1964.

SN 287,596. Thermo-Kote of America, Incorporated, Bluffton, Ind. Filed Dec. 26, 1967.

VANFOM

For Cellulose Insulation Material (Int. Cl. 17).
First use Nov. 15, 1967.

Class 13—Hardware and Plumbing and Steam-Fitting Supplies

SN 250,436. Merlin H. Albers, Pender, Nebr. Filed July 18, 1966.

HIT-N-GONE

For Clamps for Holding and Attaching an Insulator on Electric Fences (Int. Cl. 6).
First use May 20, 1966.

SN 258,211. Cathrineholm A/S, Halden, Norway. Filed Nov. 8, 1966.

LOTUS

For Enamelled Cooking Vessels—Namely, Pots, Frying Pans, Bowls, Casseroles, Serving Trays and Dishes, Lids Therefor; and Ice Buckets (Int. Cl. 21).
First use December 1962; in commerce December 1962.

SN 267,075. Talon, Inc., Meadville, Pa. Filed Mar. 20, 1967. Owner of Reg. No. 813,299.

For Slide Fasteners and Components Therefor (Int. Cl. 26).
First use on or about Feb. 1, 1959.

SN 283,060. Business Builders International Inc., Chicago, Ill. Filed Oct. 23, 1967.

GEO-METRIC

For Lawn Sprinklers (Int. Cl. 21).
First use May 27, 1967.

SN 284,419. The Akchurin Corporation, Hempstead, N.Y. Filed Nov. 9, 1967.

SEA

For Hardware Items—Namely, Machine, Stove, Carriage, Lag, and Toggle Bolts, Barrel Bolts, Wood Screws, Hinges, Safety Hasps, Butts, Sash Pulleys, Template Butts, and Catches (Int. Cl. 6).
First use on or about Dec. 30, 1965.

SN 286,408. Arc-Co Incorporated, Bridgeport, Conn. Filed Dec. 7, 1967.

ARC-CO

For Pipe Clamps (Int. Cl. 6).
First use Oct. 1, 1967.

Class 14—Metals and Metal Castings and Forgings

SN 273,425. Societe Generale du Magnesium, Paris, France. Filed June 8, 1967.

XMERAL

Owner of French Reg. No. 710,468, dated June 16, 1966.
For Common Rough or Semi-Finished Metals and Their Alloys in Bulk, Ingots, Bars, Sheets, Plates, Wire, Scrap and Particularly Alloys of Aluminum-Mercury With or Without the Addition of Other Metals Which May Be Used for Galvanic Anodes, Casings, or Machine Parts, etc. (Int. Cl. 6).

Class 15 — Oils and Greases

SN 266,189. Acheson Industries, Inc., Port Huron, Mich. Filed Mar. 8, 1967.

MOLYDAG

For Organic and Inorganic Substances in a Colloidal and/or Fine Particle State for Various Uses in the Industrial Arts—Namely, Metal Cutting and Metal Working Lubricants, High Temperature Lubricants, High Pressure Lubricants, Additives for High Temperature and High Pressure Lubricants for General Industrial and Automotive Uses, and Release Agents (Int. Cls. 4 and 1).
First use Feb. 24, 1967.

SN 276,053. Union Oil Company of California, Los Angeles, Calif. Filed July 14, 1967.

union 76

The drawing is lined for the colors blue and orange, but color is not claimed as a feature of the mark. Owner of Reg. Nos. 521,424, 739,640, and others.
For Motor Fuels—Namely, Gasoline and Diesel Fuel, and Lubricating Oils (Int. Cl. 4).
First use Dec. 29, 1966.

Class 16 — Protective and Decorative Coatings

SN 256,022. The Valspar Corporation, Rockford, Ill. Filed Oct. 7, 1966.

PRIME-RITE

Owner of Reg. No. 551,467.
For Metal Primers (Int. Cl. 2).
First use on or about Dec. 24, 1957.

SN 259,118. Imperial Chemical Industries Limited, London, England. Filed Nov. 21, 1966.

DISPERSYMER

Owner of British Reg. No. 873,252, dated Dec. 16, 1964.
For Paint-Like Baking Finishes for Metals (Int. Cl. 2).

Class 17 — Tobacco Products

SN 234,130. P. Lorillard Company, New York, N.Y. Filed Dec. 7, 1965.

DANVILLE

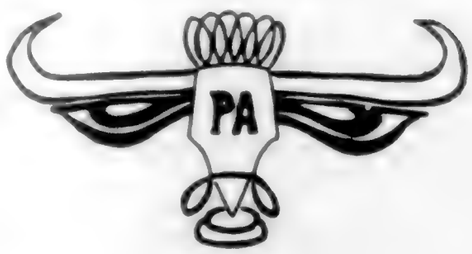
For Cigarettes (Int. Cl. 34).
First use Apr. 14, 1965.

SN 261,157. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Dec. 20, 1966.

TRIM

For Cigarettes (Int. Cl. 34).
First use Nov. 16, 1966.

SN 264,665. Glaser Bros., San Francisco, Calif. Filed Feb. 14, 1967.



For Cigars (Int. Cl. 34).
First use June 20, 1966.

SN 280,253. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Sept. 13, 1967.

BRYANT PARK

For Cigarettes (Int. Cl. 34).
First use Sept. 1, 1967.

SN 285,789. Brown & Williamson Tobacco Corporation, Louisville, Ky. Filed Nov. 29, 1967.

NEW LOOK

For Cigarettes (Int. Cl. 34).
First use Oct. 31, 1967.

SN 287,478. Brown & Williamson Tobacco Corporation, Louisville, Ky. Filed Dec. 26, 1967.

The lines on the drawing merely represent shading.
For Cigarettes (Int. Cl. 34).
First use on or about Aug. 24, 1967.

SN 288,474. R. J. Reynolds Tobacco Company, Winston-Salem, N.C. Filed Jan. 10, 1968.

MAXIM

For Smoking Tobacco (Int. Cl. 34).
First use Jan. 4, 1968.

Class 18 — Medicines and Pharmaceutical Preparations

SN 239,158. Spartans Industries, Inc., New York, N.Y., by change of name from E. J. Korvette, Inc., New York, N.Y. Filed Feb. 18, 1966.

KOR-VAL

For Medicines and Pharmaceutical Preparations (Int. Cl. 5). First use May 1957.

SN 254,348. Western Lime Products Co., Pasadena, Calif. Filed Sept. 12, 1966.

For Mineral Supplements for Animal Feeds (Int. Cl. 5). First use 1937.

SN 255,820. Sanabo Fabrik Chemischer und Pharmazeutischer Produkte Dr. Karl und Maria Stosius, Vienna, Austria. Filed Oct. 5, 1966.

PANKRODIGEST

Owner of Austrian Reg. No. 9,938, dated Feb. 4, 1949.
For Pancreas Ferment Preparation (Int. Cl. 5).

SN 255,821. Sanabo Fabrik Chemischer und Pharmazeutischer Produkte Dr. Karl und Maria Stosius, Vienna, Austria. Filed Oct. 5, 1966.

SANABOLICUM

Owner of Austrian Reg. No. 48,799, dated Sept. 11, 1962.
For Anabolic Steroid for Intramuscular Injection (Int. Cl. 5).

SN 260,591. Scientific Laboratories, Incorporated, Oklahoma City, Okla. Filed Dec. 12, 1966.

EAR-O-SEPTIC

For Pharmaceutical Preparation for Treatment of Itching and Irritation of the Ears (Int. Cl. 5).
First use Nov. 9, 1966.

SN 262,620. Rexall Drug and Chemical Company, d.b.a. Rexall Drug Company, Los Angeles, Calif. Filed Jan. 16, 1967.

METER MIST

Owner of Reg. No. 670,836.
For Preparation for Treatment of Asthma, Dispensed From an Oral Inhalator (Int. Cl. 5).
First use Oct. 1, 1964.

SN 263,004. Aristocrat, Inc., Columbus, Ohio. Filed Jan. 23, 1967.

HAIRSEPTIC

For Pharmaceutical Preparation for Treatment of Hair and Scalp Conditions Such as Minor Itch and Dandruff (Int. Cl. 5).
First use Apr. 4, 1965.

SN 265,209. Chas. Pfizer & Co., Inc., New York, N.Y. Filed Feb. 21, 1967.

ZERAMYCIN

Owner of Reg. No. 577,504.
For Antibiotic Preparation (Int. Cl. 5).
First use Jan. 6, 1967.

SN 266,084. Chas. Pfizer & Co., Inc., New York, N.Y. Filed Mar. 6, 1967.

VERRAMYCIN

Owner of Reg. No. 577,504.
For Antibiotic Preparation (Int. Cl. 5).
First use Dec. 29, 1966.

SN 266,362. Sandoz, Inc., Hanover, N.J. Filed Mar. 9, 1967.

FIOGESIC

Owner of Reg. No. 821,901.
For Analgesic, Decongestant, and Antihistamine Preparation (Int. Cl. 5).
First use Mar. 1, 1966.

SN 267,698. Vita Plus Corporation, Madison, Wis. Filed Mar. 27, 1967.

EGG-N-RICH

Owner of Reg. Nos. 723,922 and 792,119.
For Livestock Feed Supplement Containing Vitamins and Minerals (Int. Cl. 5).
First use Oct. 19, 1966.

SN 268,505. Marion Laboratories, Inc., Kansas City, Mo. Filed Apr. 6, 1967.

NITRO-BID

For Nitroglycerin Capsules (Int. Cl. 5).
First use May 13, 1966.

SN 268,891. Nutrition Square, Inc., Pittsburgh, Pa. Filed Apr. 11, 1967.

For Dietary Food Supplements Containing Vitamins and Minerals in the Form of Tablets, Herb Laxative Tea, and Vitamin Fortified Bone Meal (Int. Cl. 5).
First use Oct. 25, 1956.

SN 269,550. Merck & Co., Inc., Rahway, N.J. Filed Apr. 19, 1967.

CO-EDECRIN

Owner of Reg. No. 789,575.
For Diuretic Preparation (Int. Cl. 5).
First use Mar. 16, 1967.

SN 269,552. Merck & Co., Inc., Rahway, N.J. Filed Apr. 19, 1967.

CO-HydroDIURIL

Owner of Reg. No. 687,813.
For Diuretic Preparation (Int. Cl. 5).
First use Mar. 16, 1967.

SN 270,017. Theraplix, Paris, France. Filed Apr. 25, 1967.

TREVINTIX

Owner of French Reg. No. 525,821, dated Nov. 26, 1964 (Paris); Natl. Inst. No. 235,923.
For Tuberculostatic Preparation (Int. Cl. 5).

SN 270,331. Abbott Laboratories, North Chicago, Ill. Filed May 1, 1967.

CESCAN

For Radio-Pharmaceutical Diagnostic Preparation for Intravenous Administration (Int. Cl. 5).
First use Jan. 11, 1967.

SN 270,332. Abbott Laboratories, North Chicago, Ill. Filed May 1, 1967.

GLOFIL

For Radio-Pharmaceutical Diagnostic Preparation for Intravenous Administration (Int. Cl. 5).
First use Jan. 11, 1967.

SN 270,439. The Upjohn Company, Kalamazoo, Mich. Filed May 1, 1967.

ACT I

For Medicated Skin Preparation for the Treatment of Acne (Int. Cl. 5).
First use Feb. 21, 1967.

SN 270,440. The Upjohn Company, Kalamazoo, Mich. Filed May 1, 1967.

LINCO 4

Owner of Reg. No. 827,777.
For Antibiotic Feed Additive for Veterinary Use (Int. Cl. 5).
First use Dec. 10, 1965.

SN 270,441. The Upjohn Company, Kalamazoo, Mich. Filed May 1, 1967.

LINCO 50

Owner of Reg. No. 827,777.
For Antibiotic Feed Additive for Veterinary Use (Int. Cl. 5).
First use Dec. 10, 1965.

SN 270,442. The Upjohn Company, Kalamazoo, Mich. Filed May 1, 1967.

PLEXION

For Medicated Skin Preparation for the Treatment of Acne (Int. Cl. 5).
First use Feb. 21, 1967.

SN 270,701. Ortho Pharmaceutical Corporation, Raritan, N.J. Filed May 4, 1967.

ANIDATE

For Hormone Preparations (Int. Cl. 5).
First use Apr. 3, 1967.

SN 271,020. American Cyanamid Company, Wayne, N.J. Filed May 9, 1967.

TETAMUNE

For Tetanus Immune Globulin (Int. Cl. 5).
First use Apr. 26, 1967.

SN 271,021. American Cyanamid Company, Wayne, N.J. Filed May 9, 1967.

PRO-TET

For Tetanus Immune Globulin (Int. Cl. 5).
First use Apr. 26, 1967.

SN 271,336. Atomic Basic Chemicals Corporation, Eighty Four, Pa. Filed May 12, 1967.

Fightin Feeno

For Anthelmintic for Destroying Internal Parasites in Cattle, Sheep, etc., Comprising Phenothiazine (Int. Cl. 5).
First use Feb. 20, 1967.

SN 271,608. Europharma International, Inc., Panama, Republic of Panama. Filed May 16, 1967.

PROMECO

Owner of Panamanian Reg. No. 8,321, dated Aug. 24, 1964.
For Pharmaceutical Preparations (Int. Cl. 5).

SN 272,070. The Kendall Company, Walpole, Mass. Filed May 22, 1967.

HYPER-PHOS

For Pharmaceutical Preparation Containing Sodium and Potassium Phosphates (Int. Cl. 5).
First use Jan. 13, 1966.

SN 272,647. USV Pharmaceutical Corporation, New York, N.Y. Filed May 29, 1967.

RHINOSPAN

For Orally Effective Nasal Decongestant (Int. Cl. 5).
First use Mar. 10, 1967.

SN 272,650. USV Pharmaceutical Corporation, New York, N.Y. Filed May 29, 1967.

VAPOSPAN

For Oral Bronchodilator and Sedative for Prophylaxis and Treatment of Bronchial Asthma (Int. Cl. 5).
First use Mar. 7, 1967.

SN 280,222. Flow Laboratories Incorporated, Rockville, Md. Filed Sept. 13, 1967.

hy-FLOW

For Sterile Contact Lens Wetting Solution (Int. Cl. 5).
First use Aug. 31, 1967.

SN 287,489. Parke, Davis & Company, Detroit, Mich. Filed Dec. 26, 1967.

COSANYL-DM

Owner of Reg. No. 309,888.
For Anti-Tussive Preparation (Int. Cl. 5).
First use on or before Dec. 4, 1967.

SN 288,571. American Home Products Corporation, New York, N.Y. Filed Jan. 11, 1968.

PLEASANT DREAMS

For Somnifacient (Int. Cl. 5).
First use Dec. 15, 1967.

Class 19—Vehicles

SN 230,369. Remcon Company, El Cajon, Calif. Filed Oct. 18, 1965.

SLAVE SAVER

For Cart for Trash Cans (Int. Cl. 12).
First use July 25, 1965.

SN 249,811. S. G. Tilden, Incorporated, Garden City, N.Y. Filed July 7, 1966.

NEO-DYNE

For Brake Linings Sold as a Component of Relined Brake Shoes (Int. Cl. 12).
First use Apr. 11, 1940.

SN 254,336. Universal Oil Products Company, Des Plaines, Ill. Filed Sept. 12, 1966.

AEROTHERM

For Seating Equipment for Airplanes and Other Passenger Carriers (Int. Cl. 12).
First use July 8, 1966.

SN 258,396. Monroe Auto Equipment Company, Monroe, Mich. Filed Nov. 10, 1966.

ULTRA

For Vehicle Shock Absorbers (Int. Cl. 12).
First use Mar. 1, 1964.

SN 268,389. E and E Specialties, Inc., Lawrence, Kans. Filed Apr. 5, 1967.

GIDGET

For Sailboats, Rowboats, Motor Boats, Boat Trailers, and Car Top Boat Carriers (Int. Cl. 12).
First use Mar. 10, 1967.

SN 287,101. Donald O. Rehm, d.b.a. Guaranty Cycle Company, St. Louis, Mo. Filed Dec. 18, 1967.

GUARANTY

For Bicycles (Int. Cl. 12).
First use 1939.

Class 20—Linoleum and Oiled Cloth

SN 271,455. Dunlop Semtex Limited, London, England. Filed May 15, 1967.

SELFSTIK

For Vinyl Flooring Tiles (Int. Cl. 19).
First use Mar. 31, 1967.

Class 21—Electrical Apparatus, Machines, and Supplies

SN 242,314. American Telephone and Telegraph Company, New York, N.Y. Filed Mar. 31, 1966.

DATASPEED

For Teletypewriter Sets (Int. Cl. 9).
First use at least as early as January 1961.

SN 254,436. Coronado Manufacturing Company, Long Beach, Calif. Filed Sept. 14, 1966.

COROLITE

For Low Voltage Electric, Garden Light Fixtures (Int. Cl. 11).
First use June 1962.

SN 254,669. Canine Corps Signal Corporation, St. Louis, Mo. Filed Sept. 19, 1966.

K 9

For Electrical Home and Auto Burglar Alarm Systems (Int. Cl. 9).
First use Nov. 12, 1964.

SN 255,532. Data-Com Corporation, Birmingham, Ala., assignee of Telescriber Corporation, Birmingham, Ala. Filed Oct. 5, 1966.

TELESCRIBER

For Telephone Answering Apparatus Adapted To Record Incoming Telephone Messages and To Deliver to a Caller a Prerecorded Message (Int. Cl. 9).
First use Sept. 30, 1966.

SN 256,464. Musi-Cloud, Inc., Palos Park, Ill., assignee of Edward J. Murry, d.b.a. The Musi-Cloud Company. Filed Oct. 14, 1966.

For Loud Speaker Enclosures (Int. Cl. 9).
First use Aug. 19, 1966.

SN 257,934. Avnet, Inc., New York, N.Y., assignee of Channel Master Corporation, Ellenville, N.Y. Filed Nov. 4, 1966.

HORIZON

For Antennas, Parts Thereof, and Accessory Kits for Mounting Same (Int. Cl. 9).
First use Sept. 28, 1966.

SN 258,037. Brower Laboratories, Inc., Westboro, Mass. Filed Nov. 7, 1966.

For Laboratory Instruments—Namely, Low Noise Electronic Amplifiers, Synchronous Amplifiers, Recording Synchronous Amplifiers, Thermocouple Amplifiers, Ratio Multiplexing Amplifiers, Electronic Switches (Source Modulator) (Int. Cl. 9).
First use Nov. 7, 1962.

SN 258,602. The Standard Oil Company, Cleveland, Ohio. Filed Nov. 14, 1966.

VISTRON

For Plastic Lighting Louvers for Use as a Part of Electric Light Fixtures (Int. Cl. 11).
First use Nov. 2, 1966.

SN 260,757. The Rucker Company, Oakland, Calif., assignee of Moore Associates, Inc., San Carlos, Calif. Filed Dec. 14, 1966.

VBS

For Vehicular Radio Communication Receivers and Transmitters (Int. Cl. 9).
First use Mar. 26, 1965.

SN 262,778. Essex Wire Corporation, Fort Wayne, Ind. Filed Jan. 18, 1967.

XLPE

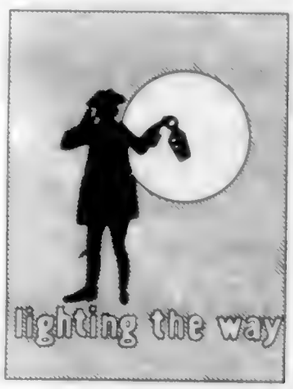
For Electrical Wire and Cable (Int. Cl. 9).
First use Apr. 25, 1966.

SN 264,617. UMC Industries, Inc., St. Louis, Mo. Filed Feb. 13, 1967.

WINSPEED

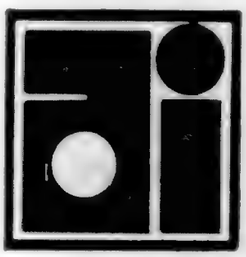
For Variable Speed Drives, Variable Speed Drive Electric Motor Controls, Electric Motors, Gear Motors, and Speed Reducers (Int. Cls. 7 and 9).
First use Sept. 28, 1966.

SN 264,797. C & H Electric Company, Chicago, Ill. Filed Feb. 16, 1967.



The drawing is lined for the color green.
For Electric Motors and Parts Therefor (Int. Cl. 7).
First use May 4, 1965.

SN 265,778. Alpha Industries, Inc., Newton Upper Falls, Mass. Filed Mar. 2, 1967.



The mark comprises the stylized letters "ai" and design.
For Microwave Diodes and Wave Guide Components (Int. Cl. 9).
First use January 1965.

SN 266,878. Goodall Manufacturing Corporation, Minneapolis, Minn. Filed Mar. 16, 1967.

CHARGE • ALL

For Battery Chargers, Activators, and Boosters (Int. Cl. 9).
First use July 15, 1966.

SN 267,012. The Chase-Shawmut Company, Newburyport, Mass. Filed Mar. 17, 1967.

CP6

For Power Fuses for the Protection of Electric Power Cables; Current Limiting Power Fuses for the Protection of Electric Power Cables; Fuse Holders for Power Fuses for the Protection of Electric Power Cables (Int. Cl. 9).
First use prior to Dec. 3, 1954.

SN 281,846. Hamlin, Inc., Lake Mills, Wis. Filed Oct. 5, 1967.

HAMLIN

For Electrical Switches and Switching Devices (Int. Cl. 9).
First use Sept. 6, 1953.

Class 22 — Games, Toys, and Sporting Goods

SN 254,535. Hamilton Equipment Corp., Brooklyn, N.Y. Filed Sept. 15, 1966.

SLENDERIDE

For Bicycle Exercisers (Int. Cl. 28).
First use June 30, 1966.

SN 257,343. American Character, Inc., New York, N.Y. Filed Oct. 27, 1966.

MAD MODS

Applicant disclaims the Exclusive use of the word "Mods."
For Dolls (Int. Cl. 28).
First use Sept. 30, 1966.

SN 259,101. Glendinning Companies, Inc., Westport, Conn. Filed Nov. 21, 1966.

For Promotional Printed Game Materials of the Public Participation Type Comprising Coupons, Envelopes for Containing Said Coupons, and Game Boards for Receiving Said Coupons for Distribution by Retail Outlets for Playing a Game To Stimulate the Sale of Their Goods and Services (Int. Cl. 28).
First use on or about Apr. 11, 1966.

SN 260,420. Franklin Manufacturing Co., Inc., d.b.a. Hanover Sports, Brockton, Mass. Filed Dec. 9, 1966.

KODIAK

For Ski Equipment (Int. Cl. 28).
First use Apr. 16, 1965.

SN 261,076. E. Edgar Handsby and Howard Tharp (joint venture), St. Louis, Mo. Filed Dec. 19, 1966.

CONFUSION

For Equipment Sold as a Unit for Playing a Board Game (Int. Cl. 28.)
First use Oct. 31, 1966.

SN 261,544. Wilson Sporting Goods Co., River Grove, Ill., assignee of Wilson Sporting Goods Co., River Grove, Ill. Filed Dec. 27, 1966.

THE A2000

Owner of Reg. No. 749,729.
For Baseball Gloves (Int. Cl. 28).
First use Aug. 2, 1957.

SN 263,012. Brunswick Corporation, Chicago, Ill. Filed Jan. 23, 1967.

BLUE SUPREME

Applicant disclaims the exclusive right to the word "Blue" apart from the mark as a whole.
For Tennis Racket String (Int. Cl. 28).
First use Sept. 28, 1966.

SN 263,636. World Toy House, Inc., St. Paul, Minn. Filed Jan. 30, 1967.

For Selected Group of Assorted Toys Contained in a Single Package (Int. Cl. 28).
First use in or about October 1966.

SN 268,069. Mueller Corporation, Akron, Ohio. Filed Mar. 31, 1967.

COMFO

For Rubber Ring Grips for Fishing Reel Back Plates (Int. Cl. 28).
First use in or about August 1934.

SN 270,422. Schoolhouse Industries, Inc., Commack, N.Y. Filed May 1, 1967.

For Equipment Sold as a Unit for Playing a Code Matching Educational Game (Int. Cl. 28).
First use Feb. 28, 1967.

SN 272,656. Wilson Sporting Goods Co., River Grove, Ill., assignee of Wilson Sporting Goods Co., River Grove, Ill. Filed May 29, 1967.

T2000

Owner of Reg. No. 749,729.
For Tennis Rackets (Int. Cl. 28).
First use Mar. 29, 1967.

SN 273,292. Kohner Bros., Inc., East Paterson, N.J. Filed June 7, 1967.

BUSY BODIES

For Equipment Sold as a Unit for Playing a Parlor Game (Int. Cl. 28).
First use Mar. 8, 1967.

SN 273,360. Atlantic Lures, Inc., Providence, R.I. Filed June 8, 1967.

KOBBLER

For Fishing Lures (Int. Cl. 28).
First use June 2, 1966.

SN 276,096. Peter A. Brett, Rowayton, Conn. Filed July 17, 1967.

TUF

For Mathematical Game Apparatus Comprising a Plurality of Cubes, Some Having Integers and Others Having Mathematical Operator Symbols Thereon (Int. Cl. 28).
First use June 26, 1967.

SN 277,996. Frank L. Foersehler, d.b.a. Huck Creek Bait Shop, Gravuis Mills, Mo. Filed Aug. 10, 1967.

MOON-EYED SHAD

The term "Shad" is disclaimed apart from the mark as shown.
For Fishing Lures (Int. Cl. 28).
First use June 2, 1967.

SN 280,398. Walter W. Collins, d.b.a. Walt Collins, Broken Arrow, Okla. Filed Sept. 15, 1967.

GLOW MASTER

The word "Glow" is disclaimed apart from use in the mark as shown.
For Plastic Worms Used as Artificial Fish Bait (Int. Cl. 28).
First use July 6, 1967.

SN 281,262. Aeroplane Tackle Manufacturing Company, Denver, Colo. Filed Sept. 27, 1967.

MARY POPPINS

"Mary Poppins" represents the name of a fictional fairy tale heroine.
For Fishing Spinners and Fish Lures (Int. Cl. 28).
First use on or about Aug. 1, 1967.

SN 281,940. Mattel, Inc., Hawthorne, Calif. Filed Oct. 6, 1967.

BABY TEENIETALK

No claim of exclusive right is made to "Baby" for dolls.
For Dolls, Doll Clothing, and Doll Accessories (Int. Cl. 28).
First use Apr. 18, 1966.

SN 282,054. Cameo Doll Products Co., Inc., Port Allegany, Pa. Filed Oct. 9, 1967.

KEWPIE ♡ JOY

Owner of Reg. Nos. 707,169 and 776,119.
For Dolls (Int. Cl. 28).
First use Apr. 1, 1966.

SN 283,068. Mattel, Inc., Hawthorne, Calif. Filed Oct. 23, 1967.

FINGLES

For Finger Toy Puppets (Int. Cl. 28).
First use Oct. 3, 1967.

SN 286,686. Josef Ess, Allgäuer Skibeschlägefabrik, Allgau, Germany. Filed Dec. 11, 1967.

For Ski Bindings (Int. Cl. 28).
First use Aug. 3, 1960; in commerce September 1960.

Class 23 — Cutlery, Machinery, and Tools, and Parts Thereof

SN 231,878. Andreas Stihl Maschinenfabrik, Waiblingen-Neustadt, Germany. Filed Nov. 1, 1965.

Owner of German Reg. No. 688,573, dated Mar. 13, 1956.
For Motor Chain Saws and Replacement Parts Therefor, Drilling Devices for Wood and Rocks, Drills for Planting-Holes, Brush Cutters, and Cutters for Tree Surgery (Int. Cl. 7).

SN 249,[illegible]3. Acushnet Process Company, New Bedford, Mass. Filed June 30, 1966.

K-COUPLING

For Tandem-Joined, Double Loop, Flexible Connector for Connecting Two Spaced Shafts or Members for Absorbing Vibrations Therebetween (Int. Cl. 7).
First use Mar. 18, 1966.

SN 250,127. Ashbrook Corporation, Houston, Tex. Filed July 13, 1966.

ASHBROOK
KINETICS

The word "Kinetics" is disclaimed apart from the mark as shown.

For Fluid Mixing Device—Namely, Internal Vortex and Mechanical Surface Liquid-Gas Mixing Systems Used Generally in the Operation of Industrial Waste and Other Treatment Systems (Int. Cl. 7).

First use May 31, 1966.

SN 250,864. Serena Industries, Chicago, Ill. Filed July 22, 1966.

FIESTA-TIME

For Hot Beverage Dispensers (Int. Cl. 11).

First use May 3, 1966.

SN 251,527. Frank W. Egan & Company, Somerville, N.J. Filed Aug. 2, 1966.

egan

For Machinery for Use in the Plastics, Paper Converting, Metal-Working, and Textile Industries (Int. Cl. 7).

First use on or about Apr. 9, 1948.

SN 251,569. UMC Industries, Inc., St. Louis, Mo. Filed Aug. 3, 1966.

FLO-BLEND

For Apparatus for Dispensing Carbonated Beverages Consisting of a Source of Carbonated Water, a Source of Syrup and Means for Mixing Metered Amounts of Carbonated Water and Syrup Together To Produce Carbonated Beverages (Int. Cl. 9).

First use July 15, 1966.

SN 254,549. Mastercraft Engineering Company, Minneapolis, Minn. Filed Sept. 15, 1966.

MASTER CRAFT

For Hand Tools—Namely, Hand-Operated Power Jig Saws and Sabre Saws (Int. Cl. 7).

First use in or about May 1965.

SN 255,655. B. Thies K. G. Spezialmaschinenfabrik, Coesfeld, Westphalia, Germany. Filed Oct. 3, 1966.

duo-bloc

Owner of German Reg. No. 767,036, dated Nov. 2, 1962.

For Bleaching and Dyeing Machines for the Textile Industry (Int. Cl. 7).

SN 255,656. B. Thies K. G. Spezialmaschinenfabrik, Coesfeld, Westphalia, Germany. Filed Oct. 3, 1966.

DUO-BLOC

Owner of German Reg. No. 759,638, dated Mar. 22, 1962.

For Bleaching and Dyeing Machines for the Textile Industry (Int. Cl. 7).

SN 255,657. B. Thies K. G. Spezialmaschinenfabrik, Coesfeld, Westphalia, Germany. Filed Oct. 3, 1966.

DUO-MAT

Owner of German Reg. No. 760,610, dated Apr. 19, 1962.

For Bleaching and Dyeing Machines for the Textile Industry (Int. Cl. 7).

SN 255,658. B. Thies K. G. Spezialmaschinenfabrik, Coesfeld, Westphalia, Germany. Filed Oct. 3, 1966.

duo-maf

Owner of German Reg. No. 767,584, dated Nov. 19, 1962.

For Bleaching and Dyeing Machines for the Textile Industry (Int. Cl. 7).

SN 256,322. Anna Stolzer, d.b.a. Firma Karl Stolzer, Achern, Baden, Germany. Filed Oct. 12, 1966.

KASTO

Owner of German Reg. No. 716,606, dated Aug. 12, 1958.

For Band Saws, Bow Saws, Cold and Hot Rotary Saws; Abrasive and Cutting-Off Machines; Machines for Electro-Erosive Cutting Off; Tools Pertaining to the Above—Namely, Saw Blades and Discs; Machines for Grinding and Sharpening Said Tools (Int. Cl. 7).

First use 1947; in commerce Jan. 2, 1960.

SN 256,655. Elba Werk Ettlinger Baumaschinen- und Hebezeugfabrik G.m.b.H., Ettlingen, Baden, Germany. Filed Oct. 18, 1966.

ELBA

For Hand Scrapers, Scraper Winches With and Without Running Gear, Jib Scraping Devices; Feeders; Concrete Mixers; Cement Worm Conveyors; Stationary and Movable Concrete Preparation Devices; Control and Regulating Devices for Concrete Preparation Machines and Parts Thereof; Combinations and Parts of the Aforementioned Goods (Int. Cls. 7 and 8).
First use 1950; in commerce 1958.

SN 257,302. Mono Pumps Limited, London, England. Filed Oct. 26, 1966.

MUTRATOR

Owner of British Reg. No. 845,927, dated Mar. 1, 1963.
For Pumps Incorporating Elutriating and Solids Comminuting Devices for Handling Raw Sewage and Trade Wastes (Int. Cl. 7).
First use January 1963; in commerce Oct. 15, 1963.

SN 257,621. Hahn, Inc., Evansville, Ind. Filed Oct. 31, 1966.

POW-R-VAC

For Power Lawn Mower Housing (Int. Cl. 7).
First use during October 1962.

SN 258,010. Westinghouse Air Brake Company, Chicago, Ill. Filed Nov. 4, 1966.

GYROZONTAL

For Crushing Machinery (Int. Cl. 7).
First use Sept. 30, 1966.

SN 258,778. Borg-Warner Corporation, Chicago, Ill. Filed Nov. 16, 1966.

QUADRIPLEX

For Rotating Shaft Bearings (Int. Cl. 7).
First use on or prior to Sept. 6, 1966.

SN 262,397. Bilt-Rite Equipment Co., Inc., West Caldwell, N.J. Filed Jan. 12, 1967.

BILT-RITE

For Mechanical Units Used for the Purpose of Transferring Goods From One Place to Another—Namely, Belt Conveyors (Int. Cl. 7).
First use May 7, 1963.

SN 262,719. TRW Inc., Euclid, Ohio. Filed Jan. 17, 1967.

MRC TRW

Owner of Reg. No. 528,062 and others.
For Ball, Roller and Laminated Bearings (Int. Cl. 7).
First use Aug. 11, 1966.

SN 262,929. Drafto Corporation, Cochranton, Pa. Filed Jan. 20, 1967.

DRAFTO

Owner of Reg. No. 384,113.
For Machine Shop Equipment and accessories—Namely, Overhead Traveling Crane Blocks, Motorized Crane Hook Blocks, Weighting Crane Hook Blocks, Interchangeable Load Section Hook Blocks, Crane Wheels, Crane Wheel Assemblies, Conversion Crane Wheel Units, Crane Parts and Subassemblies Thereof, Gears, Pinions, Axles, Sheaves, Pins, Shafting, Flexible Couplings, Gear Type Flexible Couplings, Gear Type Spindles, Rigid Couplings and Flange Couplings for Driving Rolling Mills, Disintegrators, and Component Parts Thereof
First use Nov. 30, 1944.

SN 263,545. Dazey Products Company, Kansas City, Mo. Filed Jan. 30, 1967.

DAZEY TWIN

Owner of Reg. Nos. 147,298, 737,102, and others.
For Combination Can Opener and Ice Crusher (Int. Cl. 21).
First use Jan. 11, 1967.

SN 263,683. The New York Air Brake Company, New York, N.Y. Filed Jan. 31, 1967.

BIF

For Plunger Type Chemical Pumps, Diaphragm Type Chemical Pumps, Lime Slakers, Variable Speed Transmissions, Devices for Splitting Filled Bags, Hopper Agitators, Bucket Elevators, Belt Conveyors, Bulk Material Proportioning Machines, and Parts and Accessories Therefor (Int. Cl. 7).
First use May 1955, on bucket elevators.

SN 265,544. Mor-Win Products, Inc., Los Angeles, Calif. Filed Feb. 28, 1967.

MOR-WARE

For Cutlery—Namely, Plastic Spoons, Forks, and Knives (Int. Cl. 8).
First use Nov. 25, 1966.

SN 267,572. Yeomans Brothers Company, Melrose Park, Ill. Filed Mar. 24, 1967.

SIGMA

For Surface Aerators (Int. Cl. 7).
First use Feb. 27, 1967.

SN 268,036. Degremont S.A., Suresnes (Seine), France. Filed Mar. 31, 1967.

OXYCONTACT

Owner of French Reg. No. 8,102, dated Apr. 14, 1964 (Versailles); Natl. Inst. No. 228,321.
For Sewage Disposal and Reduction Plants (Int. Cl. 11).

SN 268,570. Brother International Corporation, New York, N.Y. Filed Apr. 7, 1967.

WEBSTER ZIP-1000

For Electric Pencil Sharpeners and Letter Openers, in Combination and Separately (Int. Cl. 16).
First use Jan. 15, 1967.

SN 268,967. MIF Industries, Inc., Branford, Conn., by change of name from Malleable Iron Fittings Co., Branford, Conn. Filed Apr. 12, 1967.

GALVA-MATIC

For Galvanizing System Equipment Comprising a Conveyor, an Automatic Skimmer, an Automatic Zinc Eliminator, Pickling Apparatus, a Rotary Quench, a Drier, and Parts Thereof (Int. Cl. 7).
First use Jan. 3, 1967.

SN 269,941. Sweet Manufacturing Company, Springfield, Ohio. Filed Apr. 24, 1967.

SILVER-SWEET

For Farm Elevator Machinery—Namely, Elevator Legs (Int. Cl. 7).
First use Apr. 3, 1967.

SN 270,578. Kinetics Corporation of California, Solana Beach, Calif. Filed May 3, 1967.

STRIPALL

For Thermal Wire Stripper (Int. Cl. 7).
First use Feb. 27, 1964.

SN 272,834. Harry Hinde, d.b.a. Prawnto Shrimp Machine Co., Los Angeles, Calif. Filed June 1, 1967.

For Shrimp Cutting and De-Veining Machine (Int. Cl. 7).
First use July 1, 1953.

SN 272,858. Sargent Engineering Corporation, Fort Dodge, Iowa. Filed June 1, 1967.

HYDRA-TERRAIN

For Cranes (Int. Cl. 7).
First use Mar. 1, 1967.

SN 280,194. Farm Fans, Inc., Indianapolis, Ind. Filed Sept. 13, 1967.

DRY-O-VATOR

For Auger Assembly for Circulating Grain in Grain Storage Bins (Int. Cl. 7).
First use Aug. 30, 1967.

Class 24 — Laundry Appliances and Machines

SN 287,333. Ametek, Inc., New York, N.Y. Filed Dec. 21, 1967.

CHORE BOY

For Laundry Machines (Int. Cl. 7).
First use Sept. 12, 1967.

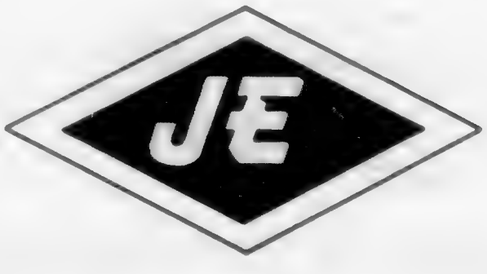
Class 25 — Locks and Safes

SN 269,571. Sargent & Greenleaf, Inc., Rochester, N.Y. Filed Apr. 19, 1967.

UNI-VERS

For Panic Exit Devices (Int. Cl. 6).
First use January 1965.

SN 272,381. Jackes-Evans Manufacturing Company, St. Louis, Mo. Filed May 25, 1967.



For Padlocks (Int. Cl. 6).
First use Oct. 19, 1966.

Class 26—Measuring and Scientific Appliances

SN 226,274. Olympus Optical Company Limited, Shibuya-ku, Tokyo, Japan. Filed Aug. 23, 1965.

OLYMPUS QUICKMATIC

Priority claimed under Sec. 44(d) on Japanese application filed Mar. 23, 1965; Reg. No. 762,281, dated Nov. 20, 1967. Owner of U.S. Reg. Nos. 647,456 and 657,415.

For Photographic Apparatus and Instruments, Their Parts and Accessories—Namely, Lenses, Attachments for Lenses for Close-Up, Lens Hoods, Filter Sets, Flash Units, Films, Lens Caps, Exposure Meters, Releases, Accessory Shoes, Self Timers, Bellows, Extension Rings, Carrying Cases, Carrying Straps, Microphotographic Equipment, Battery Testers, Flash Gun Holders, Telescope Finders, Tripods, Film Splicers, Pint Glasses for Photographic Equipment and Light Adapters for Photographic Equipment (Int. Cl. 9).

SN 238,275. James J. Oussani, d.b.a. The Staplex Company, Brooklyn, N.Y. Filed Feb. 7, 1966.

STAPLEX

Owner of Reg. Nos. 540,853, 601,607, and 771,731.

For Air Sampling Equipment—Namely, a Suction Blower Device Including Filters for Effecting Entrapment of Air Borne Particulate Matter To Permit Accurate Sampling and Measurement Thereof (Int. Cl. 9).

First use May 1, 1950.

SN 240,508. Cryocal, Inc., Riviera Beach, Fla. Filed Mar. 9, 1966.

CryoResistor

For Temperature Sensors (Int. Cl. 9).

First use Dec. 7, 1965.

SN 247,924. Houston Fearless Corporation, Los Angeles, Calif. Filed June 13, 1966.

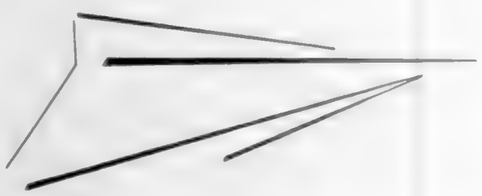
COLOR LABMASTER

The word "Color" is disclaimed apart from the mark as a whole.

For Photographic Film Processor (Int. Cl. 9).

First use Mar. 21, 1966.

SN 251,885. Braincon Corporation, Marion, Mass. Filed Aug. 8, 1966.



For Instruments Used for Marine Research—Namely, Inclinometers, Thermographs, Temperature-Depth Recorders, Current Meters, Tide Recorders, and Depth Recorders (Int. Cl. 9).

First use Mar. 31, 1964.

SN 253,017. Control Data Corporation, Minneapolis, Minn. Filed Aug. 24, 1966.

DIGISCRIBE

For Computer Entry and Display Station Comprising a Cathode Ray Display Tube and Electronic Keyboard, for Operator Communications With a Computer (Int. Cl. 9).

First use Feb. 8, 1966.

SN 254,294. Kemlon Products & Development Company, Houston, Tex. Filed Sept. 12, 1966.

KEMLON

For Combination Pump and Gas Compressor Unit for Metering Liquids and Gases in Chemical Plants (Int. Cl. 9).

First use on or about Sept. 4, 1956.

SN 254,890. Raden C. Auto-Step Co., Inc., Kansas City, Mo. Filed Sept. 21, 1966.

RADEN C

Owner of Reg. No. 817,757.

For Templates, Guides, Contact Pads, Step Masking Sheets, and Apparatus for Holding Negatives Sold Separately and in Kit Form for Use in Making Step and Repeat Photographic Images Used in the Graphic Arts (Int. Cl. 9).

First use during August 1956.

SN 256,230. Pacific Measurements Incorporated, Palo Alto, Calif. Filed Oct. 11, 1966.

For Analog Instrumentation—Namely, CRT Display Converters (Int. Cl. 9).

First use Sept. 12, 1966.

SN 257,725. The Sippican Corporation, Marion, Mass. Filed Nov. 1, 1966.

SIPPICAN

Owner of Reg. No. 735,936.

For Oceanographic Apparatus — Namely, Bathythermographic Probes, Probe Assemblies, Launchers, Recorders, Transducers, Transducer Assemblies, Signal Conditioning Equipment, and Plotters (Int. Cl. 9).

First use in or about July 1964.

SN 262,028. Debs Sunglass Corporation, North Hollywood, Calif. Filed Jan. 6, 1967.

MONKEE SHADES

For the purposes of registration, no claim is made to the exclusive right to use "Shades" but applicant waives none of its common law rights in the mark as shown in the drawing or any feature thereof.

For Sunglasses (Int. Cl. 9).

First use Nov. 16, 1966.

SN 265,176. Clay-Adams, Inc., New York, N.Y. Filed Feb. 21, 1967.

SERO-WASHER

For Devices for Automatically Filling and Emptying Test Tubes (Int. Cl. 9).

First use Dec. 7, 1966.

SN 266,316. Elektro-Physik Hans Nix & Dr. Ing. Stein-Groever K.G., Cologne-Niehl, Germany. Filed Mar. 9, 1967.

PERMAGRAPH

For Apparatus for Measuring Magnetic Properties (Int. Cl. 9).
First use November 1961; in commerce November 1963.

SN 266,919. John Rechtfertig, d.b.a. Di-Cu Company, Fairfax, Calif. Filed Mar. 16, 1967.

DI-CU

For Drafting Templates (Int. Cl. 16).
First use Feb. 1, 1965.

SN 270,597. Edward L. McLaughlin, Jr., d.b.a. Elmco Manufacturing Co., Randolph, Mass. Filed May 3, 1967.

ELMCO TRUE VIEW

For Kit for Reconstructing and Thereby Analyzing Traffic Accidents (Int. Cl. 9).
First use June 1, 1962.

SN 275,850. Paul S. Heitman, d.b.a. Gem-Mounts and Gem-Masks Company, New York, N.Y. Filed July 12, 1967.

GEM

Owner of Reg. Nos. 793,315 and 793,316.
For Cardboard, Paper, Foil, and Combination Paper and Foil, and Photographic Transparency Slide Binders (Int. Cl. 16).
First use during 1950.

SN 276,333. Materiel Experimental Scientifique Matex SA, Lausanne, Switzerland. Filed July 19, 1967.

MATEX

Owner of Swiss Reg. No. 175,872, dated June 2, 1959.
For Teaching Materials, Comprising Sets for Performing Experiments in Physics, Chemistry, and Biology (Int. Cl. 9).

SN 284,428. Minnesota Mining and Manufacturing Company, St. Paul, Minn. Filed Nov. 9, 1967.

WOLLENSAK

Owner of Reg. Nos. 620,840, 738,657, and 825,318.
For Video Tape Recorder (Int. Cl. 9).
First use Sept. 9, 1966.

SN 285,886. Flex Electric Products Co., Inc., Long Island City, N.Y. Filed Nov. 30, 1967.

PATHFINDER

For Electrically Illuminated Magnifying, Reading Glass (Int. Cl. 9).
First use July 3, 1967.

Class 27 — Horological Instruments

SN 254,330. Tressa Watches Co., Ltd., Bienne, Switzerland. Filed Sept. 12, 1966.

TRESSA

For Watches, Clocks, Watch Movements, and Parts Thereof (Int. Cl. 14).
First use October 1961; in commerce February 1962.

SN 260,646. Bulova Watch Company, Inc., Flushing, N.Y. Filed Dec. 13, 1966.

SEA HUNTER

Owner of Reg. Nos. 380,471, 700,158, and others.
For Watches (Int. Cl. 14).
First use Dec. 5, 1966.

Class 29 — Brooms, Brushes, and Dusters

SN 266,633. Johnson & Johnson, New Brunswick, N.J. Filed Mar. 14, 1967.

J CLOTH

The word "Cloth" is disclaimed.
For All Purpose Cleaning Cloths (Int. Cl. 21).
First use Dec. 20, 1966.

Class 31 — Filters and Refrigerators

SN 223,101. Charles Pierre Doucet, Meyrin-Geneve, Switzerland. Filed July 12, 1965.

DOUCET

Priority claimed under Sec. 44(d) on Swiss Reg. No. 208,509, dated Jan. 14, 1965. The word "Doucet" is disclaimed apart from the mark. The meaning of the word "Doucet" is "meek" or "mild."
For Liquid Filtration and Purification Systems, Sold as a Unit, and Parts Thereof (Int. Cl. 11).

SN 235,457. Talon, Inc., Meadville, Pa. Filed Feb. 23, 1966.

For Molded Plastic Parts for Refrigerators (Int. Cl. 11).
First use in or about December 1956.

SN 249,690. Walker Manufacturing Company, Racine, Wis. Filed July 6, 1966.

GUARDIAN

For Automotive Oil, Automotive Air, and Automotive Gasoline Filters (Int. Cl. 12).
First use May 9, 1966.

SN 255,889. The Garrett Corporation, Los Angeles, Calif. Filed Oct. 6, 1966.

For Water Separators for Removing Water From Fluids in a Fluid Conditioning System; Filters for Gaseous and Liquid Fluids; Refrigeration Packages—Namely, Refrigeration Units for Air Conditioning, and Control Components Including Ducts and Flow Control Valves for Distribution and Control of the Conditioned Air; Refrigeration Units for Use as a Component Part of a Fluid Conditioning System; Compressors for Compressing Gases and Vapors for Use as a Refrigerant; Vapor Cycle Refrigeration Components—Namely, Expansion Valves, Evaporators, and Condensers; Food Locker Refrigeration Units; and Vortex Tube Refrigeration Units (Int. Cls. 7 and 11).
First use Dec. 5, 1955.

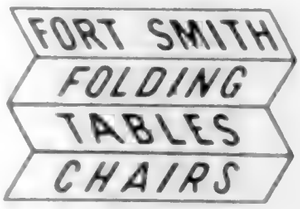
SN 256,214. A. Gusmer, Inc., Hoboken, N.J. Filed Oct. 11, 1966.

CELLUPORE

For Membrane Filters for Purifying Liquids (Int. Cl. 11).
First use June 28, 1966.

Class 32 — Furniture and Upholstery

SN 244,480. Fort Smith Plywood Company, South Fort Smith, Ark. Filed Apr. 28, 1966.



The words "Folding Tables Chairs" are disclaimed apart from the mark as shown.
For Folding Tables and Chairs (Int. Cl. 20).
First use September 1955.

SN 255,894. Helene Curtis Industries, Inc., Chicago, Ill. Filed Oct. 6, 1966.

COLOR MIRROR

The word "Mirror" has been disclaimed apart from the mark as shown.
For Mirror and Printed Hair Style Cut Outs Sold Therewith (Int. Cl. 20).
First use on or about Feb. 15, 1966.

SN 268,894. Plastic Industries, Inc., Athens, Tenn. Filed Apr. 11, 1967.

carv/craft

For Moulded Plastic Furniture Components — Namely, Drawer Fronts, Chair Backs, Bed Splats, Furniture Legs, and Furniture Rails (Int. Cl. 20).
First use January 1967.

Class 34 — Heating, Lighting, and Ventilating Apparatus

SN 257,097. Haveg Industries, Inc., Wilmington, Del., assignee of A. O. Smith Corporation, Milwaukee, Wis. Filed Oct. 24, 1966.

Glascote

Owner of Reg. Nos. 243,975, 506,826, and others.
For Water Heaters and Parts Thereof (Int. Cl. 11).
First use Dec. 12, 1964.

SN 260,779. The Standard Oil Company, Cleveland, Ohio. Filed Dec. 14, 1966.

VISTRON

For Plastic Lighting Louvers for Use as a Part of Gas Light Fixtues (Int. Cl. 11).
First use Nov. 15, 1966.

SN 265,256. Acro Welder Mfg. Co., Milwaukee, Wis. Filed Feb. 23, 1967.

ACROTRON

Owner of Reg. Nos. 549,447, 806,364, and others.
For Welding Machinery—Namely, Electric Arc Welders, Electric Resistance Welders, Electron Beam Welders, Plasma Arc Welders, and Controls Therefor (Int. Cls. 7 and 9).
First use Feb. 14, 1967.

SN 273,208. Aztec Industries, Inc., Santa Fe, N. Mex., assignee of Reynolds Electrical & Engineering Co., Inc., Santa Fe, N. Mex. Filed June 6, 1967.

SOL-DIFUZE

For Electrical Radiant Heating Panels (Int. Cl. 11).
First use May 23, 1967.

Class 35 — Belting, Hose, Machinery Packing, and Nonmetallic Tires

SN 255,922. Rich Manufacturing Company of California, Corona, Calif. Filed Oct. 6, 1966.

RICH-SEAL

For Non-Metal Seal Device for Use Between the Ends of Cast Iron Pipe Sections (Int. Cl. 17).
First use Sept. 13, 1966.

SN 260,446. Alec W. Niconchuk, d.b.a. North Shore Laboratories, Peabody, Mass. Filed Dec. 9, 1966.

TIGER TAILS

For Repair Kits for Tubeless Tires (Int. Cl. 12).
First use Sept. 1, 1966.

SN 266,209. The Firestone Tire & Rubber Company, Akron, Ohio. Filed Mar. 8, 1967.

Owner of Reg. Nos. 173,619, 779,387, and others.
For Pneumatic Tire Repair Materials—Namely, Tread Gum, Tube Gum, Stripping and Undertread Stock, Cushion Gum Cream, Repair Fabric and Patches, Filler Strip, and Sidewall Veneer Rubber (Int. Cl. 12).
First use Feb. 1, 1965.

SN 268,167. Durkee-Atwood Company, Minneapolis, Minn. Filed Apr. 3, 1967.

KWIK-FLEX

Owner of Reg. No. 588,886.
For Automotive Radiator Hose (Int. Cl. 17).
First use Sept. 16, 1952.

SN 269,651. Dunlop Tire and Rubber Corporation, Buffalo, N.Y. Filed Apr. 20, 1967.

REMINGTON UNIVERSAL TRACTION

The word "Traction" is disclaimed apart from the mark as a whole. Owner of Reg. Nos. 530,845, 615,788, and 822,865.
For Tires (Int. Cl. 12).
First use Jan. 2, 1967.

Class 36 — Musical Instruments and Supplies

SN 240,035. Jules Steinman, d.b.a. Crown City Imports, Pasadena, Calif. Filed Mar. 2, 1966.

CROWN

For Musical Instruments—Namely, Guitars, Banjos, Ukeleles, and Drums, and Amplifiers for the Named Musical Instruments (Int. Cls. 9 and 15).
First use July 15, 1965.

SN 255,688. Balfour Electronics Limited, Chadwell Heath, Essex, England. Filed Oct. 4, 1966.

PRINCESS

For Phonograph Record Changers (Int. Cl. 9).
First use Aug. 31, 1964; in commerce Aug. 31, 1965.

SN 257,228. Johnny Charles Thompson, d.b.a. Guitarsville Records and Johnny Thompson Guitars and Drums, Monterey Park, Calif. Filed Oct. 26, 1966.

For Phonograph Records (Int. Cl. 9).
First use Sept 12, 1966.

SN 259,607. Dorcie Vickers, Cambridge City, Ind. Filed Nov. 28, 1966.

PAT

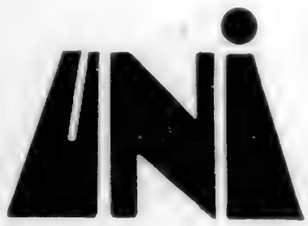
For Phonograph Records (Int. Cl. 9).
First use Aug. 18, 1966.

SN 266,556. MCA Inc., Universal City, Calif. Filed Mar. 13, 1967.

UNI

For Phonograph Records (Int. Cl. 9).
First use Feb. 6, 1967.

SN 266,557. MCA Inc., Universal City, Calif. Filed Mar. 13, 1967.



For Phonograph Records (Int. Cl. 9).
First use Feb. 6, 1967.

Class 37—Paper and Stationery

SN 249,239. International Paper Company, New York, N.Y. Filed June 29, 1966.

DATA-SPEED

For Paper Sold in Bulk Rolls or Bulk Reams for Conversion Only Into Business Forms (Int. Cl. 16).
First use Mar. 25, 1966.

SN 253,394. American Jet Spray Industries, Inc., Lakewood, Colo. Filed Aug. 29, 1966.

COLOR STROKE

For Marking Pens (Int. Cl. 16).
First use May 10, 1966.

SN 257,928. The Budd Company, Philadelphia, Pa. Filed Nov. 4, 1966.

REGATTA

For Cover Paper (Int. Cl. 16).
First use at least as early as June 28, 1966.

SN 262,942. Kimberly-Clark Corporation, Neenah, Wis. Filed Jan. 20, 1967.

MISTIES

Owner of Reg. Nos. 730,117, 749,221, and 766,402.
For Absorbent Paper Tissue, Suitable for Hygienic, Cosmetic, and Cleansing Purposes (Int. Cl. 16).
First use Jan. 16, 1967.

SN 269,135. Wilson Jones Company, Niles, Ill. Filed Apr. 13, 1967.

FAVORITE

Owner of Reg. Nos. 217,402 and 224,456.
For Desk File Pockets, Shelf File Pockets, Document Mailing Envelopes, Expanding Envelopes, File Pockets, Vertical Filing Jackets, Expanding File Folders, Desk File Folders, Student File Folders, Home File Folders, Banker Sorting File Folders, Card Index File Folders, Wallets Made of Paper for Reception of Letters, Papers and Documents for Placement in Desks or Filing Cabinets and File Folders for Placement on Desks for Classifying Documents (Int. Cl. 16).
First use 1915.

SN 269,459. Scoville Manufacturing Company, Waterbury, Conn. Filed Apr. 18, 1967.

Owner of Reg. Nos. 284,266, 804,997, and others.
For Stationery Supplies Made of Metal—Namely, Devices for Holding Together Sheets of Paper or the Like (Int. Cl. 16).
First use 1850, on metal products.

SN 269,984. Finch, Pruyn and Company, Incorporated, Glens Falls, N.Y. Filed Apr. 25, 1967.

No claim is made to the word "Paper" apart from the mark.
Owner of Reg. No. 774,144.
For Printing, Duplicating and Xerographic Copy Papers (Int. Cl. 16).
First use Mar. 17, 1967; July 1, 1959 as to the word "Finch."

SN 276,662. Hamersley Paper Mills, Inc., Garfield, N.J. Filed July 24, 1967.

ALUMI GARD

For Bleached Sulphate Paper Bearing a Coating Containing Aluminum (Int. Cl. 16).
First use Jan. 11, 1967.

Class 38—Prints and Publications

SN 258,304. General Precision, Inc., Binghamton, N.Y. Filed Nov. 9, 1966.

VAMP

For Motion Picture Films for Use in Aircraft Training (Int. Cl. 9).
First use Sept. 12, 1966.

SN 261,023. The American Oil Company, Chicago, Ill. Filed Dec. 19, 1966.

No exclusive claim is made to the words "Motor Club" apart from the mark as shown. Owner of Reg. Nos. 579,567, 811,112, and others.

For Travel Information Publications—Namely, Magazines, Road Maps, Printed Information Request Cards, Printed Trip Expense Books, Road and Highway Condition Bulletins, Personalized Travel Information Guidebooks, Motor Club Membership Handbooks, and Directories (Int. Cl. 16).

First use July 13, 1965.

SN 261,028. The American Oil Company, Chicago, Ill. Filed Dec. 19, 1966.

Owner of Reg. Nos. 443,855, 811,112, and others.

For Travel Information Publications—Namely, Magazines, Road Maps, Printed Information Request Cards, Printed Trip Expense Books, Road and Highway Condition Bulletins, Personalized Travel Information Guidebooks, Motor Club Membership Handbooks, and Directories (Int. Cl. 16).

First use July 13, 1965.

SN 261,053. Dun & Bradstreet, Inc., New York, N.Y. Filed Dec. 19, 1966.

D&B

For Credit, Financial, Marketing, Sales, and Educational Books, Pamphlets, and Reports (Int. Cl. 16).

First use in or about 1933.

SN 264,326. Medalist Publications, Inc., Chicago, Ill. Filed Feb. 9, 1967.

SERVICE WORLD

For Magazine and Section of a Magazine (Int. Cl. 16).

First use on or about Nov. 3, 1966.

SN 265,611. The Copley Press, Inc. La Jolla, Calif. Filed Feb. 28, 1967.

Owner of Reg. No. 734,558.

For Advertising Pages for Insertion in Newspapers (Int. Cl. 16).

First use May 2, 1966.

SN 265,975. Brunswick Corporation, Chicago, Ill. Filed Mar. 6, 1967.

PROFILE OF PEOPLE AND PRODUCTS

For Magazine Publication and, Specifically, a Publication Used Primarily for Internal and External Public Relations (Int. Cl. 16).

First use August 1964.

SN 266,199. William L. Cicciarelli, Gray, Pa. Filed Mar. 8, 1967.

For Charts Designed To Be Used in Solving Three Dimensional Mathematical Problems (Int. Cl. 16).

First use Jan. 29, 1966.

SN 266,379. United Business Service Company, Boston, Mass. Filed Mar. 9, 1967.

A MAN'S JUDGMENT IS NO BETTER THAN HIS INFORMATION

For Economic Service Publication—Namely, Business and Investment Report Issued Each Week (Int. Cl. 16).

First use May 29, 1921.

SN 273,501. Haywood Publishing Company, d.b.a. Oakes Consumer Catalogs, New York, N.Y. Filed June 9, 1967.

SANTA'S TOYLANE

Owner of Reg. No. 644,756.

For Consumer Catalogs, Published Annually (Int. Cl. 16).

First use in August 1967.

SN 284,333. Guaranteed Exposure, Inc., Philadelphia, Pa. Filed Nov. 8, 1967.

REAL DOUGH

For Promotional Coupons for Promoting the Sale of Goods by Others (Int. Cl. 16).

First use Nov. 3, 1967.

SN 285,496. Patch The Pony, Inc., Florence, Ala., assignee of Margaret H. Liles, Florence Ala. Filed Nov. 24, 1967.

For Educational Materials — Namely, Printed Coloring Books, Decals, Film Strip and Sound Recording Sold Together as a Unit, Informational Pamphlets, Printed Posters, and Children's Illustrated Story Pamphlets (Int. Cl. 16).

First use at least as early as Sept. 18, 1964.

Class 39 — Clothing

SN 255,218. Matsil Brothers, Inc., New York, N.Y. Filed Sept. 27, 1966.

TERRY PIPER

The mark is not known to be the name of any person and is therefore fanciful.
For Robes (Int. Cl. 25).
First use July 1966.

SN 258,816. Juliet Lingerie, Inc., New York, N.Y. Filed Nov. 16, 1966.

PETTI-FLOAT

For Slips and Half-Slips (Int. Cl. 25).
First use Oct. 27, 1966.

SN 259,821. Endicott Johnson Corporation, Endicott, N.Y. Filed Dec. 1, 1966.

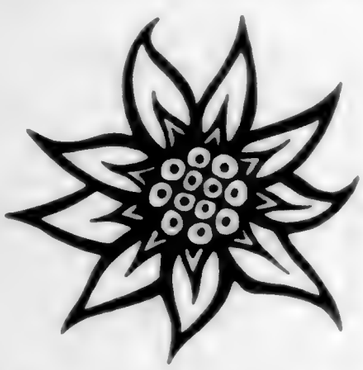
For Men's Dress and Casual Shoes (Int. Cl. 25).
First use Jan. 14, 1963.

SN 260,367. Sportville Mens Wear Inc., New York, N.Y. Filed Dec. 8, 1966.

CHEMISE DU ROI

The word "Chemise" is disclaimed apart from the mark as shown. The mark "Chemise du Roi" is a French term meaning "shirt of kings."
For Men's Shirts (Int. Cl. 25).
First use Nov. 4, 1966.

SN 260,508. Alp Sport, Inc., Boulder, Colo. Filed Dec. 12, 1966.



For Men's, Women's, and Children's Outerwear—Namely, Jackets, Parkas, Vests, Ponchos, Trousers, Boots, and Gaiters (Int. Cl. 25).
